Cumulative Subject Index

1960-1964 : Part II

(VOLUMES 63-67).

Published by THE INSTITUTION OF ELECTRICAL ENGINEERS

Savoy Place, London, W.C. 2

**In association with The Institute of Physics and The Physical Society
and The American Institute of Physics**

FOREWORD

In order to publish the Cumulative Subject Index covering the years 1960-1964 as soon as possible after the completion of this period, it was decided to present a simple amalgamation of the published annual indexes. However, where a new subject heading was introduced during the 5-year period this has been noted and the attention of the reader drawn to the appended "see also" headings under which the relevant earlier literature will be found.

As in the annual subject indexes, the entries under each subject heading are arranged in alphabetical order of the first word, irrespective of the year of the entry.

The numbers after the entries are the serial numbers of the abstracts, and the respective years are indicated by the initial number, giving the last digit of the year; this "3=1234" means "Abstract 1234 of 1963"; "0=3456" means "Abstract 3456 of 1960".

May 1967

D. S. Hopper
Director, Science Abstracts.

This index is published in two parts:

Part I Letters A-M

Part II Letters N-Z

Nebulae

- See also Galaxies
 accretion of matter into planetary or satellite systems 2=19274
 Andromeda, 75 cm survey detection 1=18196
 atomic excitation cross-sect. for forbidden lines 4=25518
 Balmer-line ratios in planetary nebulae 4=2357
 bright rim structures, movement interpretation 2=17298
 brightness, homogeneous sphere model, central energy source 0=18842
 clusters, formation and stability 2=21735
 Coma cluster, neutral hydrogen meas. 1=18124
 Coma cluster, 75 cm survey detection 1=18196
 cometary, origin 1=34
 cometary, origin and shock wave focusing 4=10843
 cometary, synchrotron radiation 0=8510
 Crab, coronal eclipse, 169 Mc/s study 0=18669
 Crab, cosmic-ray acceleration in 0=13075
 Crab, eclipse by solar corona 1=15537
 Crab, efficiency of acceleration of relativistic particles 0=15466
 Crab, fine structure detection, 38 Mc/s 4=30984
 Crab, force-free mag. fields 0=18602
 Crab, γ -rays from, possible identification 0=13077
 Crab, kinematics of filaments 0=10522
 Crab, mag. field development, analysis 4=4868
 Crab, nature of emission 0=10523
 Crab nebula, popular review 2=24164
 Crab, occultations by solar corona, June 1962 3=13936
 Crab, occultations, and solar supercorona meas. 1=15536
 Crab, occultations, test for Chapman corona 1=15535
 Crab, 1-2 μ i.r. photometric obs. 4=29408
 Crab, 1390 Mc/s radiation, linear polariz. 3=9277
 Crab, optical and radio emission calc. 1=7068
 Crab, r.f. occultations by solar corona (1957-8) 0=4863
 Crab, radio emission, 3 cm study 0=18668
 Crab, radio obs. during lunar occultation 4=30985
 Crab, radio polarization, 9.6cm 4=2467
 Crab, radio polarization, 21 cm 3=23713
 Crab, radio waves, scattering by solar corona 1=15534
 Crab, as source of cosmic-ray photons 2=1743, 22694
 Crab, 10 cm radiation, polarization 1=15567
 Cygnus, dark cloud of the Great Rift 0=12322
 Cygnus loop and related nebulosities 0=10524
 dark, distance and absorbing power 0=14453
 dark, distance and absorbing power 2=2550
 dark, thin, investig. by star counts 3=3609
 dark, thin, investigation by star counts 2=24157
 diffuse, bright rims 0=10525
 diffuse, rel. to early-type star models 2=1000
 diffuse galactic, Taurus and Scorpius-Ophiuchus regions 3=16422
 diffuse nebulae, some physical processes 1=53
 diffuse, photoelectric photometry 0=6616
 diffuse, stimulated 3.04 cm emission of H 2=4856
 diffusion of resonance radiation 3=9240
 diffusion of resonance radiation 3=16403
 dust nebulae, light scattering 4=29406
 emission, radial velocities, small cloud of Magellan 4=30970
 escape of resonance-line radiation 2=4831
 Eta Carinae (NGC 3372), radio flux at 1400 Mc/s 0=4867, 8476
 near η Carinae, effect on airglow spectra 3=6990
 evolution of central stars, planetary nebulae 4=2370
 evolutionary connection between stars and nebulae 0=18847
 extinction by dust clouds in bright nebulae 4=2373
 extragalactic distrib., zone of avoidance 2=19341
 extragalactic objects, rel. to cosmology models 2=2521
 extragalactic, radio spectrum and source size 4=10927
 extragalactic, redshift rel. to isophotal diam. 2=21731
 extragalactic, redshift, systematic error 1=18126
 faint, use of electronic camera 0=6619
 far-u.v., summary 2=17299
 filamentary, formation mechanism 1=19012
 filaments, formation 0=18821
 forbidden nebular lines, wavelengths 1=2639
 formation nearly simultaneously with stars 0=10513
 Fraunhofer line profiles, anomalous 2=17177
 Galactic, star chains and dark filaments 0=10516
 gas-dust filament, gravitational instability 4=13897
 gas dust, filament stability 3=23698

Nebulae — contd

- gas, self-absorption of Balmer radiation due to 2s H atoms 4=29407
 gaseous, evolution, age estimate 2=4832
 gaseous, expected u.v. emission spectra 4=2372
 globules, internal flow and grav. contraction 2=15391
 glow, 1290-1350A, 1350-1550A bands, lack of evidence 2=15367
 heavy-element lines in planetary nebulae 0=18843
 initial luminosity function 0=6612
 instability, self-gravitating gas cloud 4=17970
 interactions, low-velocity dispersions 0=2087
 internal chemical element occurrence 1=15411
 interstellar emission, study using Fabry-Perot etalon 0=16552
 luminosity classification, including spiral nebulae 2=2552
 Lyman α -line observation 1=6722
 Lyman α -line observation 1=10390
 L α quanta diffusion 2=24155
 M17, radio and optical distrib. 2=1024
 M17 region, at 3.75 cm wavelength, study 1=18203
 M31 radio map, 1400 Mc/s 4=2464
 NGC1097, gas movement discontinuities 1=9291
 NGC 6853 and 7293 radio-emission 2=1023
 9.6 discrete radio sources, observations 2=1021
 North America, 3727 A O II radiation 3=9148
 observations 1959-60, conference 3=9139
 Omega, 9.1 cm obs. 3=9278
 Orion, internal motions 0=10521
 Orion, model, HII region formation 4=23883
 Orion, 9.1 cm obs. 3=9278
 Orion, 1-2 μ i.r. photometric obs. 4=29408
 in photographic i.r. 1=15517
 photometry and radiometry 1=2640
 planetary, distance scale based on H β emission 2=15382
 planetary, dynamical problems 0=10518
 planetary, expanding, role of light pressure 4=10844
 planetary, galactic distrib. 4=23873
 planetary, H distrib., e density, ionization, mass. 3=23697
 planetary, He ionization rel. to structure 4=20902
 planetary, high-excitation, thermal equil. 3=1536
 planetary, internal kinematics 0=10520
 planetary, ionization structure 3=21120-1
 planetary, local density variations 0=10519
 planetary, mass meas., radio 4=13966
 planetary, masses and forms 2=24156
 planetary, masses and forms. 3=3608
 planetary, NGC 6572, 7027 2=17295
 planetary nebulae, with 2 shells 1=6720
 planetary, new or unclassified, spectral classification 4=23859
 planetary, optical thickness and central star temp. 3=9249
 planetary, origin 2=17288
 planetary, origin in shock wave in red giants 2=9095
 planetary, possible electron-driven expansion 4=2371
 planetary, review and theory 1=1657
 planetary, shape rel. to mag. field 2=24159
 planetary, shape rel. to mag. flds. 3=3611
 planetary, spectra, recombination, calc. 4=12351-3
 planetary, spectrophotometry 3=21122
 planetary, spiral and barred spiral electric discharge theory 3=18645
 planetary, with two shells 0=18820
 planetary, Zanstra theory for condensations 3=9245
 primeval, angular momentum transfer, by magneto-hydrodynamic waves 0=292
 radial velocities and internal motions of diffuse nebulae, study using Fabry-Perot etalon 4=26919
 radial velocity determ. 2=19342
 radial velocity determination 2=19342
 radiative recombination of hydrogenic ions 0=17707
 radio sources, polarization, 3 cm, search 3=18663
 radio sources, spectra 1=15566
 red-shift, quadratic law 2=17230
 reflection, u.v. temps. 2=17296
 scatterings by resonance-line photon 4=29371
 self-ionization of light atoms and Fe ions 0=846
 solar nebula, origin 3=9250
 spectra, with collisional excit. and ioniz., calc. 4=10841
 spectra, forbidden, mag. dipole transitions, theory 4=2363
 spectra, forbidden N I lines obs. 1=19592
 spectra, O III, recombination, calc. 4=4867
 spectra obtained with electronic camera 0=6619

Nebulae—contd

- spectra, spherical shell model 4=10842
 spectrum calc. with collisional excit. and ioniz. 4=10841
 spectrum excitn. from u.v. star quanta absorpt. 3=3612
 spherical clusters, quasistationary state 4=26917
 spiral, and cosmic electrical discharges 1=9290
 spiral, irregular and barred 2=7029
 spiral and irregular, ionized gas distrib. 2=15385
 stellar, spiral existence 1=9291
 structure, from light absorption study 0=18791
 temp. required for thermonuclear reactions 0=6620
 temps. for nuclear reactions 0=6620
 u.v. emission, 1225-1350 Å, due to early-star corpuscular emission 0=18840
 u.v., planetary nebulae, theory 2=17300
 ultraviolet, 1225-1350 Å, due to early-star corpuscular emission 0=18840
 H β flux, use for distance scale 2=15382
 H, LTE departures in higher levels 2=4770
 H radiation spectrum for spherical shell model 4=10842
 H II, r.f. emission, Strömgren spheres emission 0=4862
 H II region, initial development 4=17988
 H II, regions with outward decreasing density 0=12324
 hydrogen two quanta transition from 2s level 1=33
 H/He relative abundances 1=15518
 He spectrum, effect of optical depth 2=15383
 He, triplet, effect of optical depth 2=15383
 Ne IV, transition probabilities of forbidden lines 0=17670

Neodymium

- allotropy at high press. 4=26560
 antiferromagnetism, by s-f-exchange model 2=4214
 antiferromagnetism, transitions, 1.6-20°K, neutron diff. exam. 4=13273
 atomic g_J factor 1=19585
 atomic spectrum, line classification, Zeeman effect and isotope shift 4=9644
 atoms, h.f.s. by atomic beam magnetic resonance 3=4709
 diffusion, anomalous, in Ag and Pb 3=13065
 e.s.r. Nd³⁺ in CaWO₄ and Nd^{143,145} mag. moment ratios 4=15677
 elec. cond., 1.3-300°K 1=5003
 elec. resistance, effect of pressure 1=14356
 elec. resistance, effect of pressure 1=17604
 electronic transitions in CdF₂ 0=13698
 glasses, laser amplification factor at 1.06 μ 4=16706
 ion, time-resolved spectra, meas. in spark 2=14204
 ionization potential 0=14964
 ions, Nd³⁺, paramag. resonance in CaF₂ at 20°K 1=9055
 ions, relaxation processes, resonance coupling, under pulsed excitation 4=17604
 laser action of ions in silicate glass, simultaneous with Yb ions 3=7737
 laser, continuous-wave 3=22014
 laser, glass, La-Ba-Th-borate, Nd doped, 4F_{3/2} \rightarrow 4I_{13/2} 4=14948
 laser line relax. time meas. 4=24923
 liquid, surface tension, 1030-1186°K 3=5425
 luminescence, Nd³⁺ in Ba glass and CaWO₄, electron beam prod., 100°K 4=26245
 luminescence, Nd³⁺ in CaF₂, spectrum, var. conc. 4=15613
 luminescence of Nd³⁺ in silicate glass, transfer from optical excitation of Ce³⁺ 4=28721
 mag. behaviour, 300-1500°K 0=11810
 magnetic props., calc. 0=11807
 magnetization and approach to saturation 0=13776
 in molten Nd tribromide, elec. conductivity 4=8220
 n. m. r. of Nd³⁺ in CaWO₄, Na compensated or uncompensated 4=13348
 photoelectric emission 2=7646
 photoelectric emission 3=5694
 specific heat, 0.4°-4°K, nuc. and mag. analysis 4=9853
 spectrum, atomic, additional levels 4=6480
 spectrum, isotope shifts in NdI 4=12371
 spectrum, isotopic shift 0=15662
 spectrum, visible, rel. to 4f shell transitions 3=13182
 Nd³⁺ e.s.r. in CaF₂ 3=3172
 Nd ethyl sulphate, spin-lattice relaxation 1=14809
 Nd⁺⁺⁺, ionic distrib. coefficient in CaF₂ 1=14990
 Nd³⁺, in crystals, magnetic and spectroscopic theoretical investigation 2=21295
 Nd³⁺ e.s.r. in CdS, at 1.4°K 4=7333
 Nd³⁺, e.s.r. in Nd ethylsulphate 4=13328
 Nd³⁺ e.s.r. in SrTiO₃ 4=26417

Neodymium—contd

- Nd³⁺ e.s.r. in SrTiO₃ 4=26441
 Nd³⁺, in ethyl sulphate, cross relax. time 2=10707
 Nd³⁺ fluoresc. in PrCl₃, 5-6 μ , 4-2°K 4=28732
 Nd³⁺ in glass, fluorescence, environmental effects 4=20485
 Nd³⁺ glass, maser, optical, 1.06 μ 3=22008
 Nd³⁺, i.r. absorption spectra in soln. 3=9462
 in La ethyl sulphate, ground state population changes, direct optical detection 2=21238
 Nd³⁺ in LaBr₃, absorption spectrum 3=3009
 Nd³⁺ magnetization process, in gallate garnets, high temp. var., calc. 4=20517
 Nd³⁺, optical maser characteristics in CaF₂ 2=8508
 Nd³⁺, optical maser characteristics in SrMoO₄ 2=8509
 Nd³⁺, radiationless resonance energy transfer from UO₂²⁺ in Ba crown glass 4=22914
 Nd³⁺ spectrum, in LaCl₃, crystal quantum no. reassignments 4=25829
 Nd³⁺ spectrum in LaCl₃ 4=4260
 Nd³⁺ spectrum, in LaCl₃, erratum 4=17572
 Nd^{143,145} in LaCl₃, double resonance, mag. moment r³ 2=23714

Neodymium compounds

- garnets, ferromag. props. 1=12543
 salts, energy level assignments 0=7686
 Nd-activated glass, as optical quantum generator, flash spectrum, time variation 3=25444
 Nd chloride, soln. in alcohol-water, temp. depend. 3=21374
 Nd ditelluride, Hall effect 3=20340
 Nd ethyl sulphate, crystal fields, from γ -ray anisotropy of oriented Pm¹⁴⁴ 1=3587
 Nd ethylsulphate, e.s.r. 3=8714
 Nd ethylsulphate, e.s.r. of Nd³⁺, temp. depend. 4=13328
 Nd ethyl sulphate, electronic spectra, analysis 4=1740
 Nd ethylsulphate, mag. h.f.s. coupling of Pm isotopes 3=12906
 Nd ethyl sulphate, nuclear orientation of Ce^{137,137m} in 1=2162
 Nd ethylsulphate, nuclear orientation of Dy^{155,157} 1=10958
 Nd ethylsulphate, spin lattice relaxation at liq. He temps. 0=10232
 Nd ethylsulphate, vibr. energy levels and spec. heat 4=1364
 Nd gallate, paramag. susceptibility, temp. var. 2=2271
 Nd-Al, crystal structure, new cpds. 2=4437
 NdAl₃, mag. moment and Curie pt. 3=991
 NdBr₃ powder, emissivity 0=16919
 NdBr₃-NdBr₂, conductance max. 4=8220
 NdCd₁₁, electronic configuration and dimensions 3=13237
 NdCl₃ in alcohol-water soln., absorption spectra, -87°K 3=1691
 NdCl₃, diluted with LaCl₃, absorption and fluorescence spectrum 1=10101
 NdCl₃, fluorescence spectrum, analysis 0=8015
 NdCl₃.6H₂O, higher ground state electron levels 2=16606
 NdCl₃.6H₂O, 1.1-4.2°K, 2-2660 c/s 3=8719
 NdCl₃.6H₂O specific heat, 1.2° to 220°K 1=17415
 NdCl₃.6H₂O, spin-lattice relax. 1.1° to 4.2°K 3=3183
 NdCl₃-SrCl₂, electron exchange between adjacent oxidation states 4=8220
 NdCo₅, ferromag. coupling and thermomag. props. 2=10640
 NdCoO₃, thermal cond. meas., heat transfer processes 4=30532
 Nd-Fe system compound, crystal structure, atomic 4=4605
 NdFeO₃, mag. props., neutron diff. study, 1.25-955°K 0=10187
 NdH₂ (x = 2.02-2.75), ferromag. props., variation with temp. 3=15744
 NdI₃, molten, elec. cond. of Nd 3=21404
 Nd³⁺:LaBr₃[Cl₃], blue fluorescence excitation by ruby laser 4=20483
 Nd-Mg double nitrate, reflection spectrum 3=23063
 Nd in Mg, supersat. solid soln., decomposition, effect of cold plastic deformation 4=10435
 NdMg nitrate, mag. and thermal props. 2=12384
 NdMg nitrate, spin-lattice relaxation 2=14836
 Nd₂Mg₃(NO₃)₁₂.24H₂O, absorption spectrum 4=7145
 Nd₂Mg₃(NO₃)₁₂.24H₂O, crystal space group 4=7632
 Nd(NO₃)₃.6H₂O electron transitions in far i.r. 4=1419
 Nd(NO₃)₃.6H₂O, far i.r. absorptn. at liquid He temps. 3=3006

Neodymium compounds—contd

- Nd_2NiO_4 , antiferromagnetism 3=18107
 Nd_2O_3 , specific heat and thermodyn. props. 3=20104
 Nd_2O_3 , thermal expansion, X-ray diff. meas., 20-1050°C 4=17372
 Nd_2O_3 , vaporization 1=8263
 NdS , thermal emission, 800°-1500°C meas. 4=14744
 NdS , thermal expansion, X-ray determ. 4=30523
 NdS , Nd_2S_3 , thermal exp., 20-1020°C, Debye temp. 4=22508
 Nd_2S_3 , 800°-1500°C meas. 4=14744
 $\text{Nd}_2(\text{SO}_4)_3 \cdot 8\text{H}_2\text{O}$, Gd^{3+} e.s.r. 2=10698
 in SrF_2 , absorption spectra, luminescence, 77° K, optical maser 3=20482

Neon

- absorption on carbon black 1=20684
 absorption spectrum 0=9770
 adsorption on Pt 2=8889
 acoustic wave propag., by localized r.f. breakdown 4=19019
 afterglow, enhanced, on short-circuiting discharge 2=19908
 afterglow, following pulsed d.c. excitation 4=14597
 arc, rel. to C cathode hybrid spots 3=4070
 arc, elec. cold-cathode characteristics, at pulsed-current loading 3=4077
 arc, elec., low-pres., optical radiation phenom. 3=4078
 arcs, electric, and their radiation spectrum 2=9551
 atoms, charge exchange with $\text{Xe}^{3+,4+}$ 2=15891
 atoms, charge exchange with $\text{Xe}^{3+,4+}$ 3=5630
 atom, elastic electron scatt., semiempirical calc. 4=9671
 atoms, electron scatt., inelastic, continuum, oscillator strength determ. 4=25516
 atoms, electron scatt., Thomas-Fermi approx. 1=19605
 atoms, electron scattering, sharp resonance 4=25566
 atoms, excitation, direct and stepwise, effect, cross-sections 4=19977
 atoms, excitation functions 2=18424
 atoms, excitation induced by H^+ and He^+ impact, 5-35 keV 4=25540
 atoms, Gaussian wave-functions 4=25504
 atoms, gyromagnetic ratio in $^3\text{P}_2$ state 0=17669
 atoms, Hartree-Fock SCF wave-functions 2=515
 atoms, ionization by colls. with Xe^{n+} 3=7426
 atoms, laser scatt., 4=25541
 atoms, metastable, collision cross-sections with A, He, Ne 0=2727
 atom and Ne II, resonance lines 3=14355
 atom- Ne^+ collisions, electron capture and stripping 3=4725
 atom, $1s^2 2s 2p^4$ configs., analytic self-consist. field functions 4=15273
 atom, photoeffect, sum rules 4=25544
 atoms, polarizability, dipole, calc. 0=9736
 atomic polarizability and London force consts. 4=3790
 atoms, polarizability and mag. susceptibility 1=4914
 atom, readjustment after K-shell ionization by X-rays 4=9653
 atom, recombination rate constants, three-body 4=17852
 atomic scatt. factor and charge distrib. radius 2=10857
 atomic scatt. factor, X-ray, rel. to theory 4=3797
 atoms, 736A line transition probability 4=28133
 atoms, two-electron transitions to autoionizing states 3=19927
 atom, 3d-4f transition and 4f config. 4=6479
 atom, $2p^5 n l$ states, coupling schemes calc. 4=1189
 atomic wave-functions 2=8059
 atoms wave functions and correlation energies 4=3789
 breakdown, electric, rel. to added Ar (0.01-0.3%) 3=19221
 breakdown, u.h.f., formative time-lags 3=7491
 colliding with Fe and W, thermal accommodation coeffs., theory and expt. 4=15814
 compressibility, quantum hard-sphere model 3=21434
 compressibility, theory rel. to expt. 2=19605
 condensed film at low temp., optical props. 0=740
 counters, pulse-powered, use in hodoscope 2=3426
 crystal struct., atomic, ~10°K, electron diff. obs. 4=29123
 crystalline Ne^{20} and Ne^{22} , lattice const., X-ray study 1=15070
 crystals, surface energy calc. 4=17336
 d.c. glow discharge, plasma conductivity 1=16287
 density, 20×10^6 atmospheres 3=21100
 diamagnetism, calc. 0=17795
 diffusion and drift of positive ions 4=21463
 diffusion in Duran glass 4=4073

Neon—contd

- diffusion in H 2=1194
 diffusion in liquid hydrogen 1=10510
 diffusion in NH_3 2=19608
 diffusion, in Ne- CO_2 mixtures 1=6895
 diffusion of Ne^{22} - Ne^{20} in pure Ne, thermal 3=14203
 diffusion, solubility and permeability in Vycor glass 0=5051
 discharge, c.w. laser action up to 133 μ 4=30086
 discharge, d.c., in Ne-Hg vapour mixture 3=9734
 discharge, elec., probe noise in various regions 3=14550
 discharge electric, hot cathode, moving striations 4=11544
 discharge, electric by pulsed 3200 Mc/s discharge, boundary movement 4=21471
 discharge electric, stationary and moving stratification 4=8646
 discharge, glow, anomalous, charge-exchange 3=19219
 discharge, high-frequency, striations 4=474
 discharge, low-pressure, with positive column, periodic structure 4=18739
 discharges, point-to-plane, in Ne and Ne-A mixtures 2=9545
 discharge, positive column, h. f. cond., electron density and temp. 4=5575
 discharge, positive column theory rel. to expt. 2=19909
 discharge, striations, fast-running, peculiar excitation 3=19195
 discharges, use in particle track visualization 2=5559
 discharge, wave of stratification striations 2=7574
 double ionization by electron impact 0=2317
 elec. discharge, cathode fall for monocrystalline Ge, Si, Cu 0=19633
 electric discharge, current buildup 2=3023
 elec. discharge, effect of a.m. h.f. field, striation waves 0=10889
 elec. discharge, effect of radiation on striations 0=2334
 electric discharge, electrodeless h.f. spectroscopic study 2=11627
 elec. discharge, electron energy distrib. 1=16316
 elec. discharge, electron velocity distrib., 0.1-20 mm Hg 0=16981
 elec. discharge, glows, moving striations, Ne_2^+ formation 0=10890
 elec. discharge, h.f. superimposed on d.c. glow, effects 0=7086
 elec. discharge in He-Ne, maser oscillations and population inversion 1=7440
 elec. discharge, l.p. constricted, plasma temp., electron conc. 1=13092
 electric discharge, low-current, positive column study 1=4581
 elec. discharge, moving striations, negative sections 0=19637
 electric discharge, positive column constriction 3=14549
 electric discharge, positive column, electron energy distrib. function 2=168
 elec. discharge, probe meas., 1-20 mm Hg 0=19690
 electric discharge, pulsed, afterglow dependence on density 1=4576
 electric discharge, pulsed, electron temp. and particle conc. 2=165
 electric discharge, r.f. in Ne- O_2 , optical maser action 2=22908
 elec. discharge, under s.h.f. pulses 0=16982
 electric discharge, v.h.f., in restricted gap, spectra 1=4907
 electron capture from multiply charged Kr ions 2=17791
 electron diffusion coeff., thermal, meas. 4=8613
 electron drift velocity, 77-373°K 1=2300
 electron scatt., multiple, 40-130 keV, spatial distrib. 4=887
 electron stopping power 0=352
 equation of state, P-p-T, 27-300°K, up to 200 atm, from corresp. states 4=14205
 excitation in discharge positive column 3=24238
 excitation of upper levels, in d.c. discharge, quenching collision broadening 4=14598
 fast $\text{Ne}^{0,+2+,3+}$ colls. with inert-gas atoms, slow-ion production 2=154
 fast $\text{Ne}^{0,+2+,3+}$ colls. with inert-gas atoms; slow-ion production 3=366
 first ionization coeff. 0=5271
 flash tube, detector of ionizing particles 1=7163
 gas flow, free-molecular, momentum transfer to metal surfaces 3=5456
 gas, ionization by H^- and O^- ions 1=4558

Neon—contd

gas, ionized, rarefied, charge-carrier diffusion 3=16906
 gas maser, optical output 3=525
 gas, scattering of electrons 1=16424
 glow, cathode fall, changes, with polycryst. Mo cathode 4=11549
 glow discharge, effect of hollow cathode on striations 3=7477
 glow discharge, harmonics 0=19647
 glow discharge, moving striations, effect of standing stratification 3=9754
 glow discharge, positive column instability 2=7582
 glow discharge, positive column instability in mag. field 1=284
 glow discharge, positive ion prodn. by Penning mechanism 3=7474
 glow discharge, striation production 0=2336
 glow-discharge tubes, effect of A, Kr, Xe admixtures 2=11632
 glow. reference tube, rel. to Ar, Kr, Xe admixtures 3=4054
 ground-state wave-functions 1=13930
 h.f. discharges, optical and electrical props. 1=2950
 h.f. electrical discharges, effect on coupled circuit 1=5425
 intermolecular potential functions, 2nd virial coeff. 1=7503
 ion beam, range in metals from sputtering yield 3=5721
 ion beam on W, photon prod., 25-100 eV 3=21900
 ion collisions in H and D 0=10881
 ion mobilities from electron density meas. 4=2948
 ion mobilities in He-Ne mixtures 1=7028
 ion-molecule reactions with H₂ under electron bombard. 4=4694
 ion Ne²⁰, charge distrib. at high velocities 3=7447
 ionization cross-sections near threshold, electron impact 1=16257
 ionization by electrons, mass spectrometers study 2=15883
 ionization by electrons and protons, Born approx. 2=9529
 ionization front velocity in column excited by u.h.f. at one end 3=4037
 ionization by h.f. pulse, recombination 3=4024
 ionization, multiple, by electrons 0=7070
 ionization by protons, 0.15-1.1 MeV 3=4006
 ionization in pulsed discharge 2=1388
 ions, bombard. metals, secondary electron emission 4=8822
 ions bombarding W, ionic entrapment and thermal desorption 4=13693
 ions, ionization of inert gases 0=12578
 ions in Ne gas, at 500°K, transfer, exchange cross-section, field, temp. var. 4=29870
 ions, Ne⁺-A, Ne⁺-Ne potential energy functions 1=818
 ions, Ne⁺, range in quartz, 7.5-52 keV 1=336
 ions, Ne⁺, sputtering of f.c.c. metals, Ge and Si 2=13608
 ions, range and ionization in emulsions 0=12772
 ions, recomb., temp. var. 3=24222
 ions, scatt. in Ne gas, with electron capture 0=12590
 ions, sputtering of Cu, atom, energy distrib. 4=24754
 ions, sputtering in Cu, temp. var. 4=10018
 ions, sputtering of KCl, 400 eV 3=4215
 ions, 20-100 eV, sputtering of Au 2=13607
 ionization cross-section, partial, when bombarded with protons, 0.8-3.75 MeV 4=27481
 ionization, electron, first Townsend coeff. meas. 4=5555
 ionization by electron impact, with fast crossed-beam 4=24589
 ionization, first and second coeffs, meas. 4=18681
 ionization, first Townsend coeff. meas. 4=24587
 ionization and formation of long-lived excited ions 4=25492
 ionization, and He⁺, Ne⁺, Ar⁺ beam losses 4=24594
 ionization by pulsed 3200 Mc/s discharge, boundary movement 4=21471
 ionization, by 30-1000 eV He atoms, meas. 4=27482
 isotherms at temp. 0-150°C and press. < 2900 atm 1=6879
 isotopic abundances in meteorites 2=951
 isotopes in liquid state, vapour pressure, by phenomenological cell model 1=9385
 isotopic ratio, Ne²⁰/Ne²² 3=454
 isotope separation by molecular pumps, calc. 0=4161
 laser action up to 57.355 μ 4=11823
 laser, pulsed radiation generation 4=5851
 in lasers, 6328 Å oscillation modes 4=14934

Neon—contd

laser transitions, probabilities 4=11825
 in lasers, Zeeman effect, at 3.39 μ 4=14936
 lifetimes of l = 3 orbitals, meas. by method of delayed coincidences 0=7702
 liquefaction and use in laboratory 4=21368
 liquefaction, Linde, 66°K, 50-200 atm. 3=21640
 liquid, density and short-range coordination 2=21893
 liquid, heat transfer coeffs. meas. 4=8201
 liquid, radical distrib. function 2=19537
 liquid, structure det. by X-ray diffraction 2=2705
 liquid, thermal conductivity 3=18802
 liquid, viscosity 3=21310
 lubricating full journal bearings 0=5046
 magnetoplasma, Faraday effect, microwave cavity meas. 4=18894
 maser, optical, He-Ne, hole burning effects 2=11784
 maser, optical, He-Ne, 3.39 μ 3=19495
 maser, optical, oscills., ~1.8 μ , f-d transitions 3=14806
 μ -meson capture rate from bound state 4=6365
 metastable states, decay rate, in He-Ne discharge 4=28132
 meteorites, stone, high content 2=6999
 mixtures with A, potential parameters, from viscosity 1=14122
 molec. ion formation, under static discharge 0=243
 molecular parameters, self-consistent set 1=12335
 molecule-ion, formation kinetics 2=16569
 negative striations 1=8314
 optical pumping in He-Ne, 1.269 μ emission 4=767
 pair coupling, NeI 5g level 4=28116
 Penning mixtures, Ne-H, primary ioniz. coeff. 4=21462
 photoionization cross-section, 80-600 Å meas. 4=12390
 plasma, cold, negative radiation temperature 3=9787
 plasma, electron collisions, energy transfer and frequ. 4=24586
 plasma, electron density, rate of fall 4=24664
 plasma, Ne-A mixtures, diamag. moment 0=19693
 plasma, radiation temperature resonances, r.f. meas. 3=4121
 plasma, temp. and electron density meas. 1=313
 positive ion production, by energetic He⁺ impact 4=24569
 positive ions, 5-25 keV, sputtering of Cu 1=8363
 powerful impulsive discharges, electron energy meas. 3=7452
 preconduct current pulses, at low press. and audio freq. 0=1105
 prod. from air decomposition plant 3=16472
 production and use 3=16471
 purification, cataphoretic 4=24276
 refractive index and verdet const., theoretical deriv. 1=8164
 scattering by Ni, polycrystalline 4=19996
 in scintillation counters, mixed with A, Xe, for neutron detection. 1=3077
 solid, cohesive energy calc. 4=28301
 solid, crystal structure, at 4-24°K 4=10544
 solid, excitation energies in Ne:A system, calc. 2=2065
 solid, H, D impurity 1s-2p transitions obs. 4=30503
 solid, lattice thermal cond. at low temp. 2=10341
 solid, neutron absorption cross-section 0=20153
 solid, at 0°K, quantum variational calc. 4=20150
 solid, optical absorption by A impurity 1=19747
 solid, thermal cond. 0=9868
 spark lines, pressure broadening and Stark effect 0=5874
 spectra in highly ionized state, meas. 3=10448
 spectra of Ne IV, V, VI in 2200-3000 Å 3=10459
 spectrum, atoms, new He-Ne laser stimulated transitions 4=21681
 spectrum, discharge, electric, r.f., similarity to Geisler tubes at high powers 4=5612
 spectrum, 1.15 μ 2p₁ ← 2s, transition, isotope shift and saturation behaviour 3=19944
 spectrum, stimulated transitions 4=28131
 sputtering of K 2=3093
 stimulated emission of new i.r. transitions 4=12383
 striation waves rel. to stimulated running striations 3=19191
 thermal cond., up to 500°C 0=8711
 thermal cond. of mixtures with other inert gases 0=104
 thermal conductivity, 25°, 50° and 75°C, up to 2600 atm 4=21183
 thermal diffusion factor, temp. dependence 1=15948

Neon—contd

- thermal transpiration at high temps. and
 3×10^{-3} –2.5 mm Hg press. 4=5224
- thermodynamic props., T–s, p–v diagrams 4=11231
- u.h.f. breakdown, time-lags 2=3024

 interactions in spark chamber, existence of two kinds of ν 2=20308
 interactions, vector boson polarization 4=865
 interactions, for weak interaction selection rules tests 4=16817
 known properties, review, and astrophysical role 3=24686
 lepton pair production 4=11973
 leptonic structure and family interrelation 2=11913
 losses in nuclear processes 2=22485
 Majorana theory of muon's neutrino 3=10082
 mass effect on β -decay transitions, theory 1=9827
 $\mu + A \rightarrow \mu + A + \nu + \bar{\nu}$, cross-section in Coulomb field 1=19159
 from μ decay, effects of nonzero mass 1=16750
 and μ decay, non-zero rest mass effect 3=22158
 $\mu \rightarrow e + \nu + \bar{\nu}$, Michel parameter 2=5699
 μ , mass meas. proposal, from 3-secondary decays, momentum spectra, high energy 4=881
 μ prod., at great depth, detection possibility 3=19608
 $\mu^- + \text{He}^3 \rightarrow \text{H}^3 + \nu$, mass, upper limit 2=3369
 $\mu^- + \text{He}^3 \rightarrow \text{H}^3 + \nu$, mass, upper limit 3=4417
 $\mu^- + p \rightarrow \Lambda + \nu$, cross-sections 1=19173
 muonic, decay electron spectrum for finite mass 3=10135
 muonic, mass from π^- decay 4=19542
 muonic, mass rel. to decay electron spectrum 4=19540
 muonic, mass, upper limit meas. in $\mu + \text{He}^3 \rightarrow \text{H}^3 + \nu$ 4=19484
 muonic, rest-mass effects 4=19483
 muonic, scattering, effect of mag. moments 4=21760
 neutrino beams, production and possible expts. 1=16752

Neutrinos and antineutrinos—contd

neutrino differences for electron and muon association 3=4359
 "neutrino flip" in universal Fermi interaction 2=11863
 neutrino with mass, possibility of existence and decay rate 4=15041
 neutrino theory of light, photon as "bound state" of two neutrinos 4=30202
 $n + \nu \rightarrow \text{lepton} + \text{baryon}$, weak-interact. theory 4=5955
 nuclear excitation by antineutrinos, low-energy, from reactor, possibilities 3=17244
 nuclear reactions, rel. to ν_e and ν_μ identity 2=12228
 $\nu + A \rightarrow \nu + A + \mu^+ + \mu^-$, cross-section in Coulomb field 1=19159
 $\nu + A \rightarrow \nu + A + \mu^+ + \mu^-$, cross-sections in Coulomb field 2=22465
 $\nu + A \rightarrow \pi + \mu + A$, diffraction mechanism, in nucleus field 3=24688
 ν - K_{es} mode, non-locality and asymmetry 4=9170
 $\nu + n \rightarrow \mu^- + p$ and $\bar{\nu} + p \rightarrow e^- + p$, resonances, theory 0=11085
 $\nu + n \rightarrow p + e^-$, cross-section, calc. 1=3162
 $\nu + n \rightarrow p + e^-$, mediation by Regge particles, theory 3=24608
 ν -N collisions, π prod. scatt. amplitude 2=18154
 $\nu + N \rightarrow e + N$, cross-section, rel. to nucleon form-factors 0=17300
 ν -N interaction, π -meson production 3=4429
 ν -N interaction, π -meson production 2=3363
 ν -N and $\bar{\nu}$ -N collisions, pion prod. 3=7825
 $\nu + N \rightarrow N + e$, rel. to inner structure of the nucleon 1=16768
 ν_μ , mass uncertainty 4=25001
 $\nu + N \rightarrow Y + l$, hyperon polarization 4=955
 $\nu + p \rightarrow p + e^- + \pi^+$, theory 3=10148
 $\nu + Z \rightarrow \mu + \pi + Z$, in nuclear Coulomb field 3=2293
 $\nu\bar{\nu}$ pairs, photoproduction on electrons 1=16751
 $\bar{\nu} + e^- \rightarrow \pi^- + \pi^0$, cross-sections 1=19173
 $\bar{\nu} + e^- \rightarrow \pi^- + \pi^0$, cross sections 2=22482
 $\bar{\nu} + p \rightarrow \Lambda + \mu^+$, cross-sections 1=19173
 $\bar{\nu} + p \rightarrow \Lambda + \mu^+$, cross-sections 2=22482
 $\bar{\nu} + p \rightarrow n + e^+$, calc. 1=3162
 $\bar{\nu} + p \rightarrow p + e^+ + \pi^-$, theory 3=10148
 only one neutrino existence in weak interactions 4=11970
 1-spinor field theory 4=27776
 $p + \nu \rightarrow \nu + \mu + \bar{e} + p$, theory 4=9106
 pair emission by hot plasma, calc. 3=7824
 pair production from photons 2=3299
 pair production from photons 3=2232
 pairs, bremsstrahlung emission, in nondegenerate gas, applic. stars 0=11141
 pairs, production in stars 4=4855
 particle mixture theory, assuming two kinds 3=7773
 photon theory of Jordan 3=16724
 photoneutrino emission in stars 3=23693
 photoproduction on electrons and radn from stars 3=577
 photoproduction on electrons and radiation from stars 2=273
 π, β decay differences, review 4=19455
 $\pi \rightarrow \mu(\text{or } e) + \nu$, corrections for ν mass 4=30245
 π -meson pair prod. on nuclei 4=30214
 π -meson or strange particle prod. at 1 GeV 2=18099
 π prod. by ν -N collision, weak-interaction matrix element 2=18153
 possible high-energy neutrino expts., theory 0=9332
 production in atmosphere 2=5774
 production in atmosphere 3=4493
 production, in $e^- + e^-$ annihilation in stars. 1=10875
 prod. of e^-e^+ pair in nucleon field 0=12913
 production by $\gamma + e^-$ and $e^+ + e^-$, evolution from stars 1=8445
 production, $\gamma + \gamma \rightarrow \nu + \bar{\nu}$, forbiddenness for local coupling 1=5700
 production, $\gamma + \gamma \rightarrow \nu + \bar{\nu} + \gamma$, reaction rate, method of calc. 1=5700
 prod., high-energy from p-synchrotron, horn focussed, external target 3=17343
 production of intermediate boson pairs, cross-section 4=5959
 production, in $\mu + A \rightarrow \mu + A + \nu + \bar{\nu}$, cross-sections in Coulomb field 2=22465
 production, in $\mu + p \rightarrow \Lambda + \nu$, cross-sections 2=22482
 production at 1 GeV, by CERN proton synchrotron 2=3119
 production from $1-10^5$ GeV N-N interactions 3=4366

Neutrinos and antineutrinos—contd

production of π and K-mesons at high energies 3=22163
 production of vector bosons and muons 3=10070
 proposed detection by resonance absorption in crystals at low temp. 0=3954
 quantum field theory 4=9050
 radiation from degenerate electron gas 4=882
 radioactivity and stellar emission 4=10818
 reactions, with C^{12} - N^{12} , rel. to type of neutrino 2=10145
 reactions, high-energy, conserved vector current and partially conserved axial-vector current hypotheses 4=28015
 reactions due to neutrinos, search for 4=6314
 reactions on spinless targets, Regge poles 4=25004
 Regge pole in high-energy reactions 3=22104
 relativistic hydrodynamic model 1=8043
 relativistic quantum theory 3=4327
 review for the non-specialist 4=6017
 review, problems 4=879
 review, theor. and exper. work 1=3160
 role in astrophysics, review 4=30213
 scatt. by nuclear Coulomb field 1=19120
 scatt. on nucleons in anomalous muon interact. model 3=5984
 scatt., by nucleons, high energy neutrinos, possibilities 3=17244
 scattering, by $e, \nu_e, \bar{\nu}_e$, spin correl. calc. 4=21836
 scattering on electrons, higher approximations 3=2241
 scattering, rel. to lepton currents 2=20254
 scattering on nuclei, rel. to $\mu^+\mu^-$ and e^+e^- pair prodn. 3=7880
 scattering on nuclei, rel. to $\mu^+\mu^-$ and e^+e^- pair production 2=20380
 scattering on nucleons in anomalous muon interaction model 2=16183
 scattering by nucleons, search at 1 GeV 3=578
 scattering by polarized electron, energy depend., theory 4=16269
 second neutrino and particle classifications 3=14871
 second neutrino and Sakata scheme generalization 3=4363
 from Σ^+ decay, polarization, validity of $|\Delta I| = \frac{1}{2}$ 0=15443
 single four-component neutrino theory 3=7823
 solar flux detection possibilities 1=21968
 spark chamber, CERN 3=24690
 spectra from stopped π and μ mesons 2=9887
 and star collapse 4=20899
 and star, collapse 4=26900
 star prod. of neutrinets by $\gamma + \gamma$ or $\gamma + (A, Z)$, small calc. cross-section 4=7952
 in stars evolution, prevention of supernovae 4=26899
 stars, super, sizes and masses calc. 4=23850
 stellar and cosmic, degradation 4=2387
 stellar emission, $\gamma + \gamma \rightarrow \gamma + \nu + \bar{\nu}$ process 3=24689
 stellar emission of photoneutrinos and pair annihilation neutrinos 1=8445
 stellar emission processes 2=2541
 stellar evolution, influence of neutrino processes 4=2334
 strange, rel. to elementary particle vacuum cloud 4=9076
 strange neutrino, ν' , as a basic particle in composite model of particles 1=15308
 strong radio sources, detection rel. to intermediate bosons 4=26962
 use to study weak interactions, capabilities of present accelerators 0=11140
 sun, detection by $Cl^{37}(\nu, e^-)Ar^{37}$ 4=20818-19
 sun radiation, intensity calc. on p-p cycles 4=26942
 from sun, and He content 4=29436
 theory, weak interaction concepts 1=8444
 transformation groups and proper states, gauge invariance 1=16749
 two-component, discussion 0=17274
 two-component eqn., invariance under transformations 1=13315
 two-component equation rel. to Maxwell's equations 1=16500
 two-component theory, compar. with Dirac particle theory 0=11173
 two kinds, rel. to basic particle-lepton symm. 4=3299
 two kinds, from interactions in spark chamber 2=20308
 two kinds proposed, conservation laws in lepton processes 0=12831
 2 kinds, rel. to 6-dimensional manifold systematization 3=12437
 two-neutrino hypothesis, lepton-baryon symmetry 2=22546

 Mo, vacancy annihilation 3=2787
 Mo, X-ray diffraction study 1=2399
 NO₂ prodn. in liquid N₂ and O₂, 14.6 MeV 3=8976
 NaBrO₃, thermal decomposition 3=6911
 NaCl, dissolution and contact melting 1=19819
 NaCl, vacancies, direct meas. 3=8427
 NaI:Tl, scintillation response to monoergic neutrons 0=17355
 (Na₂K)Sb, (Na₂K)CsSb, film, photoelectric emission 3=14632
 Nb, irradi. damage and resistivity 3=22769
 Nb, point defects 2=23151
 Nb, recovery at 150°C, vacancy migration 4=12729
 Nb₃Sn defects, effect on supercond. 4=18597
 Nb₃Sn, superconducting critical currents 4=11475
 NbZr, superconducting critical currents 4=11475
 Ni alloys, with Mn, Cr, Al, Mo and Fe, elec. and mag. props. 2=23233
 Ni ammonium salts, thermal recovery 3=8472
 Ni crystals, mag. props. 2=10652
 Ni, ferromag. viscosity, relaxation time 0=18185
 Ni, ferromagnetic alloys, Italian, I.E.N.G.F. work 4=22953
 Ni, ferromagnetic drag bands 4=13196
 Ni films, phase change and mag. props. variations 0=10338
 Ni films, for various substrates and atmospheres 3=22869
 Ni, phase transform. 4=23282
 Ni, plastic deformation, ferromag. meas. 4=10394
 Ni, point defect clustering 3=22721
 Ni, strengthening by bombardment 4=23165
 Ni-Cr (21.4 wt%), phase transform. K 4=23282
 Ni₃Fe, effect of foreign atoms on irradi. resistance at high temp. 4=7276
 Ni-Fe (50/50), ordering, and mag. props. 4=13207
 NiO, chemisorption of O₂ and H₂ 3=3366
 NiO, Li-doped, tritium release 2=17100
 NiO, sorption of O₂, H₂, N₂O 3=13604
 Np²³⁹, γ-γ coincidence and neutron activation det. in U²³⁸ 1=17248
 O₂ adsorption in NiO 3=13567
 Os (IV) cryst. hexagonal complexes, nuclear recoil defects annealing 2=21006
 Pb, dissolution and contact melting 1=19819
 Pb, supercond., crit. field 3=14451
 PbO, red and yellow, crystal structure changes 4=26564
 PbS i.r. detectors, lifetime 2=9447
 PbZrO₃, ferroelec. props. 3=13118
 Pt, irradi. damage, focusing collisions along twin boundaries 1=11246
 Pt, point defects production 0=20798
 Pt, Fe, thermal spikes, size meas. 3=22853
 Se, irradiation, effect on K absorption spectra 2=23583
 Si, annealing of damage 4=4005
 Si, B-doped, He detection on cleavage 4=22570
 Si, carrier lifetime 1=17714
 Si, carrier lifetime 3=22933
 Si, carrier lifetimes, annealing 2=23223
 Si, carrier removal rate, rel. to neutron irradi. 3=17517
 Si counter diodes, recoil spectra of Si 3=25307
 Si, damage and annealing processes 4=15509
 Si, defects 3=22725
 Si, defects, nature and size of damaged regions 0=2835

Neutrons and antineutrons—contd
moderation—contd

- slow, flux meas. 2=6072
 slowing down, energy distrib., Boltzmann eqn., exact and asympt. soln. 4=21870
 slowing down in infinite homog. medium, exact and asympt. time—energy distrib. 4=21871
 slowing-down spectrum, CANDU-type reactor 3=25031
 slowing-down in sphere, P_{∞} point-source soln. 3=24740
 slowing down as stochastic process 2=11957
 slowing down in water and iron-water assemblies 2=11955
 in solids and thermalization near equilibrium 4=25455
 Soviet progress, conference 4=9002
 spectra about resonance 4=25109
 temperature distrib. of neutrons in cylinder of hot moderator 3=25001
 temperature relaxation, in water 4=6068
 thermal column of an exponential experiment 3=15253
 thermal flux in moderator of supercell 3=8158
 thermal neutron spectrum, integral eqn. 3=12721
 thermal neutrons, distrib., in various media 4=15071
 thermal spectra in lattice cells, "Spectrox" method 4=1137
 thermal spectra, in poisoned media, eigenfunction calc. 4=25107
 thermal spectrum near temp. discontinuity 4=19896
 thermalization operator, generalized Horowitz 3=22142
 thermalization, time decay consts. 3=8167
 thermalization, transient phenomena 4=19893-4
 time-dependent neutron thermalization problem 3=24738
 toluene, pulsed source 4=25113
 transfer cross-section between overlapping thermal groups 3=8168
 transport eqn. soln., STRETCH computer programme 4=6074
 vel. depend. transport with high-energy sources 3=10126
 water, attenuation functions, from isotropic and unidirectional fission sources 3=2274
 in water, fast fission 3=7865
 in water and ice, pulse method 2=18126
 water moderated lattices, Dancoff correction, new formula 2=6064
 in water, 16°–89°C, diffusion length 2=5665
 in water, slowing-down and thermalization time 4=30234
 in water, slowing-down time meas. method 2=7867
 Wilkins eqn. and higher order eqns. 2=5678
 Wilkin's thermalization theory 2=13816
 zircaloy 2, cross-section meas. 2=6035
 in B carbide, at 3 and 15 MeV 2=1692
 in Be, (n, 2n) and (n, a) reactions 2=10118
 in Be, thermal flux energy distrib. 4=12019
 Be, thermalization time 2=5667
 $Cd_3Ta_2O_7$, use as reactor control material 3=4699
 H_2O , lifetimes to Cd and Ga cut-off energies 4=27863
 H_2O , thermal diffusion temp. var. 4=3419
 in H_2O , thermalization parameters, meas. method 4=21877
 H_2O, D_2O , pulsed source 4=25113
 Zr, cross-section meas. 2=6035
 in Zr hydride, pulsed source method 2=18129
 $ZrH_{1.75}$, thermalization, temp. dependence 4=21878

polarization

- after scattering by ferromagnet 1=20120
 analysis using scintillation bubble chamber 4=12023
 beam by Bragg reflection from Co–Fe alloy 1=2062
 beam, polarized, prod. 18–120 MeV 2=13810
 beam prodn., monochromatic 4=918
 beam sources, partially polarized, from nucleon–deuteron collisions, theory 1=12131
 beams, high-energy, 45% polarization, production 0=11182
 beams, 10^{-3} –10eV, prod. and study 3=24741
 β -decay, electron asymmetry 1=2058
 β -decay of polarized neutrons, asymmetries 0=11174
 collimators, reflecting, multi-channel 3=22140
 in Coulomb scattering 1=5731
 $d(d, n)He^3$, 4=30277
 $d + \gamma$ (12–30 MeV), and mesonic effects? 3=12513
 in (d, n) reactions, rel. to initial d polarization 4=9551
 decay of polarized neutrons, spatial asymmetries 1=500
 in deuteron diffraction splitting 2=5635
 deuteron photodisintegration, meas. 3=15044
 deuteron photodisintegration at 2.75 MeV 2=323
 deuteron scatt., spin-orbit effect 2=20344

Neutrons and antineutrons—contd
polarization—contd

- direct nuclear reactions; correl. of incoming and outgoing polarization 1=19431
 during transmission through matter 4=6058
 elastic scatt. of polarized neutrons at 2.8 MeV 2=3582
 elastic scattering by complex nuclei, exact theory 2=14101
 in elastic scattering on Cu, Zn, Mo, Cd 1=13807
 electrical polarizability, scattering 1=13430
 energy spectrum, polarized neutrons, using mag. field 3=2269
 helical magnetic structures, after scattering 3=18097
 intermediate energy, methods 4=3415
 magnetic crystals, elastic scatt. 3=15861
 magnetized mirrors and mag. materials, technique and analysis 4=9205
 meas. by diffusion cloud chamber 3=19654
 measurement 3=6014
 measurement, depolarizing plate double reflection methods 2=18124
 measurement, 5–40 MeV 4=3414
 measurement, by scatt. asymmetry, corrections for finite geometry and energy 3=19646
 μ^- absorption at rest, virtual π -meson effects 0=17368
 in (μ, n) reactions 1=5929
 due to muon capture by nucleus 1=2063
 n-d elastic collisions, < 2 MeV 2=16200
 n-d elastic scatt., < 1.0 MeV 2=16199
 n-d scatt., 1 MeV, elastic 3=12680
 in n-d scatt., 1.0 MeV 3=19637
 n-d scatt., 1.9–23.7 MeV 3=19645
 n-d scatt., at 1 and 2 MeV 0=11180
 n-d scatt., at 2–4 MeV 0=5564
 n-d scattering at 0.5–1.95 MeV 3=587
 in n-n scattering 2=5654
 n-p scatt. at 16 and 24 MeV 2=18120-1
 n-p scatt., at 77 MeV 0=7353
 n-p scatt. at 128 MeV 1=501
 n-p scattering below 100 MeV 2=1691
 n-p scattering at 140 MeV 2=5655
 neutron-electron scatt., rel. to quantum electro-dynamics 2=5563
 noncollinear spin densities, distinguish from collinear 3=19643
 nuclear scatt., cpd. nucleus and direct contribs. 3=2471
 nuclear scatt., elastic, near 1 MeV, optical model 3=4644
 optical model fringe absorption, $90^\circ < A < 120^\circ$ region 2=20654
 p-n scatt., 126 MeV, 33° – 82° c.m. meas. 4=16900
 polarizability in terms of S-matrix 1=19205
 polarized beams, prod. and nuclear reactions 2=12179
 reflection, Co mirror, reactor thermal flux 4=905
 by reflection from Co mirrors 4=16903
 rotator frequency, rel. to mag. moment precession, calc. 4=9213
 scatt. by C, 1 MeV elastic 3=12680
 scatt. by O, 1 MeV, elastic 3=12680
 on scatt. from various nuclei, at 2.09 MeV, optical model analysis 1=19479
 scattered from heavy nuclei 4=25402
 in scattering on C, at 12 MeV, spin-orbit effects 1=2217
 in scattering, elastic, 1.5 MeV 4=16902
 in scattering in ferromag. and antiferromag. substances 2=4231
 scattering in ferromagnetic and antiferromagnetic substances 3=3121
 in scattering, inelastic, distorted wave theory 0=17574
 scattering on nuclei at 0.38 to 2.1 MeV 1=8703
 after scattering, on nuclei with rotational and vibrational spectra 4=17141
 scattering with protons at 23.1 MeV 3=10121
 source using D(T, He^4)n reaction 4=16904
 spin-orbit interaction, two particle, effect 2=3345
 static meson theory, electric polarizability 1=8437
 stripping reaction $C^{12}(d, n)N^{13}$ 1=13845
 "supercold" polarized neutron prod. 0=20154
 thermal, spin reversal without depolarization, apparatus 2=11961
 transfer matrix method for beam transport calc., extension 1=2026
 transmission through polarized Ho^{165} nuclei 2=12207
 Al, elastic scatt. at 24 MeV 3=6255

Neutrons and antineutrons—contd
polarization—contd

Al, elastic, 2 MeV, ang. distrib. meas. 4=25404
 Al(p,n), 143 MeV 3=10349
 Al scatt., 2.6 MeV 4=9520
 Ar<65, scattering, 3.5 MeV 3=2470
 B¹¹(d,n)C¹², C¹²*, 12.3 MeV 4=22173
 Be during transmission through matter 4=6058
 from Be⁹, excited by circularly polarized γ 1=17077
 Be⁹(γ ,n)Be⁸, mag. dipole transition effects 3=22364
 Be⁹(γ , n) neutrons 2=5888
 Be⁹(γ ,n), for 2.75 MeV γ 4=22110
 Be⁹(p, n)B⁹, 3.7-8.5 MeV 3=19848
 Be⁹, photoneutrons 2=14074
 Bi, elastic scatt. at 24 MeV 3=6255
 Bi(γ ,n), 0.4-16 MeV 4=22119
 C, elastic scatt. of polarized neutrons, asymmetry 0=455
 C, elastic scatt. at 24 MeV 3=6255
 C¹³(d,n)N¹³ 1=719
 C¹²(d, n)N¹³ 1=19521
 C¹²(d, n)N¹³ 3=4666
 C¹²(d,n)N¹³, 6.5 MeV 3=22417
 C¹²(p,n)N¹²*, neutron polarization, calc. using impulse approx. 1=13793
 C¹², scatt. at 15°, polarized beam production 0=11182
 C¹³ scattering ang. distrib. 3=19857
 C¹³(γ , n); below giant res. 1=19440
 Co(d, n) 3=24963
 Co, elastic, 2 MeV, ang. distrib. meas. 4=25404
 by Co films, mag. props. and structure, atomic, var. with electrolysis conditions 3=23509
 by Co-Fe crystals, precision cutting 3=20821
 Cu(d, n) 3=24963
 Cu, polarization strength for 3.4 MeV neutrons 2=20632
 by Cu, scatt. of 3.4 MeV neutrons 3=22392
 D-D, angular and energy dependence, 275-450 keV deuterons 4=9307
 D-D neutrons, meas. with solenoid 0=17346
 D-D reactions, energy dependence 0=9376
 D(d, n)He³ 3=24807
 D(d, n)He³, at 1.9-11 MeV 2=1732
 D(d, n)He³, 5-30 MeV neutrons 2=482
 D(d, n)He³, at 8.2 MeV 0=443
 in D(d, n)He³ reaction 4=16978
 in D(d, n)He³ reaction below 200 keV 4=19604
 in D(d, n)He³ reaction, energy depend. 4=25204
 D(d, n)He³, 70-153 keV 4=16977
 D(d, n)He³, at 2-4.5 MeV 0=17589
 D(p,n), 143 MeV 3=10349
 Fe(d, n) 3=24963
 Fe, elastic scatt. at 24 MeV 3=6255
 Fe, elastic, 2 MeV, ang. distrib. meas. 4=25404
 Fe scatt., 2.6 MeV 4=9520
 Ho¹⁶⁵ + n, oriented, spin-spin interaction \ll spin-orbit interaction 4=25413
 Li(p,n), 143 MeV 3=10349
 Li⁶, scattering at 40, 90, 156 MeV 2=16414
 Li⁷(p,n)Be⁷, ang. distrib., E_p = 4.5 MeV 3=17462

scattering—contd

CH₄, liq., spectrum rel. to mol. interaction 2=5002
 CH₃SH, study of hindered rotation potential barrier 0=5912
 C₆H₆, 0.2-2.7 × 10⁻³ eV, -100° to +200°C 1=13429
 Ca, elastic, above 6 MeV, optical model 3=672
 Ca, elastic, at 14.6 MeV 0=7609
 by Ca, elastic, 3-4 MeV 3=19856
 Ca, elastic, 220 MeV 0=5738
 Ca, elastic, at 900 keV, cross-section 2=18327
 Ca, fast neutrons, elastic scatt., ang. distrib. 2=12197
 Ca, 14 MeV, n, γ coincidences 3=17476
 Ca, total cross-section, 1.25-2.1 MeV 4=17161
 Ca(OH)₂, lattice vibrations study 3=17643
 Cd atom, coherent scatt. 2=15011
 Cd, coherent scatt. amplitude 2=2385
 on Cd, elastic, at 14.6 MeV 0=7609
 Cd, elastic, 0.3 MeV meas. 4=12231
 Cd, elastic at 96 MeV, cross-sections 1=697
 Cd, elastic at 96 MeV, optical model 1=698
 Cd, at 14 MeV, cross-section 2=22806
 Cd mirrors, total reflection 2=20352
 Cd, 0.275-0.85 keV, optical-model analysis 4=9521
 on Cd sheet, generalized albedo 1=2267
 Ce, elastic, Wigner cusp obs. near threshold 3=22394
 Ce, inelastic, 3.0 MeV, rel. to zero spin identification 4=3536
 Ce¹⁴⁰, near threshold 3=6212
 Cm²⁴⁴, total cross-section, 0.01-900 eV meas. 4=22161
 Co, cross-section 1=19483
 Co, effect of domain walls 2=21333
 Co, elastic, at 14 MeV 0=457
 Co, elastic, 2 MeV, ang. distrib. meas. 4=25404
 Co, elastic, 3.25 MeV, polarization 4=17148
 Co, mag. order, high temp., thermal neutrons 4=28794
 Co, potential scattering 1=2218
 Co, by spin waves 2=8648
 Co⁵⁹, thermal, spin depend. 3=15213
 Co-Fe alloy, det. of spin-wave dispersion curve 1=1228
 Co-Fe, mag. scattering, polarized neutrons 0=4492
 Cr, differential cross-sections, for elastic scatt., 300-800 keV 4=25405
 Cr, inelastic, at 0.98-3.31 MeV, γ-ray spectra 3=2466
 Cr, at 2.9 MeV spectra and cross-section 2=5924
 Cr, at 2.35 MeV, ang. distrib. 0=7607
 Cr⁵², inelastic, and excitation, 1-4 MeV 4=17042
 Cu, cross-section 1=19483
 Cu, at 8.3 BeV 2=16416
 Cu, at 8.3 BeV 3=6257
 Cu, elastic, at 96 MeV, cross-sections 1=697
 Cu, elastic at 96 MeV, optical model 1=698
 Cu, elastic, polarized neutrons at 2.8 MeV 2=3582
 Cu, elastic, back-angle, at 14.6 MeV 0=458
 Cu, elastic, 3.25 MeV, polarization 4=17148
 Cu, inelastic, γ-ray spectrum 0=9679
 Cu mirrors, total reflection 2=20352
 by Cu, polarizing power for 3.4 MeV neutrons 3=22392
 Cu, potential scattering 1=2218
 Cu single crystal, slow-neutron scatt. by phonons 1=9970-1
 Cu, small-angle, at 2.8 MeV 2=460
 Cu, small-angle, due to vacancy clusters 4=10009
 Cu, U, Th, at 0.8 and 2.8 MeV, small angle 3=4646
 D atoms, upper bounds on scatt. length 0=5863
 D(n, p)2n, n-n, length 2=1729
 D, neutron elastic scattering, rel. to slowing-down lengths 1=16811
 D₂ molecule, slow, excitation calc. 4=25645
 D₂, quantum states transition 3=25074
 D₂O, energy distrib., meas. 4=16092
 D₂O, liquid and solid, vibrational props. 2=10321
 D₂O, scatt. low expt. 2=22526
 D₂O, 22° and 150° C 4=21862
 Dy, natural, resonance integrals 4=17150
 Er¹⁶⁶⁻⁸, low-energy resonances 1=17123
 Eu atom, coherent scatt. 2=15011
 Eu, coherent scatt. amplitude 2=2385
 Eu^{151,152}, resonances, spin states meas. 4=15165
 F¹⁹, inelastic, at 2.56 MeV, γ-ray ang. distrib. 0=7605
 F²⁰, 1-300 MeV, nuclear levels meas. 4=9395
 Fe, critical scattering 0=16137
 Fe, cross-section 1=19483

Neutrons and antineutrons—contd
scattering—contd

Fe, on d- and f-electrons, in crystalline fields, outer electron config. 0=12028
 Fe, elastic, 0.3 MeV meas. 4=12231
 Fe, elastic, 2 MeV, ang. distrib. meas. 4=25404
 Fe, elastic, 3.25 MeV, polarization 4=17148
 Fe, elastic, at 24 MeV, ang. distrib. 2=3580
 Fe, elastic, 24 MeV, polarization 3=6255
 Fe, elastic, Wigner cusp obs. near threshold 3=22394
 Fe, inelastic, critical 3=3120
 Fe, inelastic, γ-ray spectrum 0=9679, 20502
 Fe, inelastic, spatial distrib. at 4 and 14.9 MeV 0=3971
 Fe, inelastic, 3.4 to 4.6 MeV 1=12203
 Fe, inelastic, at 3.7-4.7 MeV, nonelastic at 15.2 MeV, ang. distrib. 0=9667
 Fe, inelastic, to 3.8 MeV, γ-rays prod. cross-section 2=5923
 in Fe layers, secondary spectrum 1=19482
 in Fe, mag. scattering, polarized neutrons 0=4492
 Fe mirrors, total reflection 2=20352
 Fe, ne·r crit. mag. temp. 4=13187
 Fe nonelastic cross-sections, by pulsed neutron technique 4=3676
 Fe, polarized neutrons, spin wave theory 3=6717
 Fe, total cross-section, meas. rel. to temp. 2=11945
 Fe, at 2.35 MeV, ang. distrib. 0=7607
 Fe, 2.6 MeV, polarization 4=9520
 Fe, Zn, Zr, Cd, Sn, Ba, Hg, Bi, U, 0.5, 0.8 MeV, 30-140° 4=19787
 Fe⁵⁶, energy level anal. 4=1018
 Fe⁵⁶, first excited level, ang. distrib. 1=13808
 Fe⁵⁶, inelastic, diff. cross-sections 2=459
 Fe⁵⁶, inelastic, for 0.84 MeV γ-ray meas. 2=18330
 Fe⁵⁶, inelastic, at 1.0-3.3 MeV, cross-sections 1=8734
 Fe⁵⁶, inelastic, at 2.0 MeV, n-γ ang. correl. 2=20641
 Fe⁵⁶, inelastic, at 2.56 MeV, γ-ray ang. distrib. 0=7605
 Fe⁵⁶, inelastic, at 3 MeV, direct-interaction contrib. 1=8735
 Fe⁵⁶(n, n'γ)_{0.845} at 2.0 MeV, n'-γ ang. correl. 4=6347
 Fe⁵⁶(n, n'γ) 4=12232
 Fe₃Al, polarized neutron study of magnetic-form factor 0=11828
 α-Fe₂O₃, spin fluctuations 1=20118
 Fe₃O₄, mag. scattering, polarized neutrons 0=4492
 Fe₃O₄ (magnetite), mag. scattering 1=20117
 Fe₃O₄, rel. to spin-wave dispersion curves 3=1152
 Fe₃O₄, spin waves, rel. to neutron polarization 2=10667
 Ga, coherent scatt. amplitude 3=25201
 Ga⁷¹, Ga⁶⁹, strength fn., spin var., calc. 4=28036
 Gd^{155,157}, low-energy resonances 1=17123
 Gd^{155,157}, resonances, spin states meas. 4=15165
 H, bound in benzene and diphenyl, total neutron cross-section meas. 4=28238
 H-containing media, fast neutron spectra calc. 2=18116
 by H liq. 1=15841
 H, neutron elastic scattering, rel. to slowing-down lengths 1=16811
 H₂ molecule, slow, excitation calc. 4=25645
 H₂, para and ortho, cross-sections 0=2548
 H₂, quantum states transition 3=25074
 H³, elastic, 3.72-10.72 MeV, diff. cross-sections, calc. 1=556
 by He⁴, 1.79 MeV, ang. distrib. 3=17281
 by He⁴, phase shift analysis 3=15205
 HF-H₂O soln., distrib., meas. 4=16092
 H₂O, energy distrib., meas. 4=16092
 H₂O, 0.2-2.7 × 10⁻³ eV, -100° to +200°C 1=13429
 H₂O, scatt. law expt. 2=22526
 H₂O, 22°, 150°C 4=15072
 H₂S, gaseous, total cross-section 3=4733
 H₂S, liq., 0.0058-0.187 eV meas. 3=14141
 H₂S, liquid state 0=15360
 He, double scatt., 15 MeV, right-left asymm. 4=9211
 He, liquid, atomic motions det. 1=4525
 in He liquid at λ-transition, rel. to zero-point energy 4=8543
 He, liquid, inelastic, rel. to thermodynamic functions, theory 0=8872
 He liquid, statistical mechanics application 4=24081
 He II, elementary excitations, energy spectrum 1=254
 He II, idealized expt., calc. 2=19467

Neutrons and antineutrons — contd
scattering — contd

HeII, liquid, rotating 1=18687
 HeII, using time-depend. Green's functions 2=7488
 He³, elastic, ang. distrib. 0=9367
 He³, elastic, 0.05-17.5 MeV, cross-section 1=9779
 He³, elastic, 1-6 MeV, diff. cross-sections 0=17435
 He³, 5-20 MeV, elastic scatt. calc. 0=9352
 He³, low-energy elastic 2=9931
 He³, 0.0003-11 eV cross-section 4=12083
 He⁴, low-energy, doublet splitting, rel. to tensor force of pion-theoretical potential 0=20311
 He⁴, at 90 MeV, calc. using impulse approx. 0=20247
 Hf, slow 4=29111
 Hf¹⁷⁸, spin of levels by resonant scattering 2=371
 on Hg, differential elastic cross-section 1=19425
 on Hg, elastic cross-sections, 2 MeV 1=12201
 Hg, elastic, 0.3 MeV meas. 4=12231
 Hg, elastic, 0.65 MeV meas. 4=12230
 Hg, inelastic, energy spectrum 2=3583
 Ho¹⁶⁵, polarized, 1 MeV, azimuthal asym. calc. 4=12234
 Ho-In alloy, det. of nuclear polarization 2=18511
 by I¹²⁷, 800 keV, inelastic 4=17149
 I¹²⁷, first excited level, ang. distrib. 1=13808
 I¹²⁷, inelastic, asymmetry in ang. distrib. 0=9677
 I¹²⁷, inelastic, 2.95 MeV, γ -ray spectra 3=8106
 I^{127,129}, fission prod., total cross-section meas. 4=17173
 In, coherent scatt. amplitude 3=25201
 In elastic, at 6.7 MeV, diff. cross-sections 2=22821
 In¹¹⁵, d-wave strength functions, determ. 4=6345
 In¹¹⁵, resonance, apparatus and method 3=6012
 In¹¹⁵, thermal activation cross-sections and reson. integrals meas. 4=17169
 In¹¹⁶, spin of levels by resonant scattering 2=371
 K, elastic, 0.3 MeV meas. 4=12231
 K, total cross-section, 0.9-2.1 MeV 4=17161
 K⁺ + n \rightarrow K⁰ + p 1=16899
 KBr, lattice dynamics, Green's function calc. 4=9824
 by KH₂PO₄, low freq. H vibs. 3=20384
 Kr, fast 4=12233
 La¹³⁹, inelastic, 2.95 MeV, γ -ray spectra 3=8106
 La¹³⁹, 2.95 MeV 2=10111
 Li, elastic, at 96 MeV, cross-sections 1=697
 Li, elastic at 96 MeV, optical model 1=698
 Li, elastic, Wigner cusp obs. near threshold 3=22394
 Li isotopes, elastic, inelastic, 14 MeV 2=18328
 Li⁶, impulse approx. 2=16414
 Li⁶(n, γ)Li⁶ 1=8866
 Li^{6,7}, 14 MeV, elastic, rel. to ang. and energy distrib. 4=17142
 Li^{6,7}, inelastic, 8.1-14.1 MeV 3=12683
 Li^{6,7}, inelastic, at 14 MeV 0=11445
 Li^{6,7}, polarization, resonances 2=10101
 Li⁷, cross-section, partial and total, 0.001 eV to 15 MeV 4=25408
 Li⁷, inelastic, at 14 MeV, distorted-wave Born approx. 1=8736
 Li⁶ and Li⁷, optical model for 1.5-14 MeV 3=2469
 Lu, slow-neutron cross-section 1=2219
 90 MeV, analysis, rel. to π -meson field theory 0=12930
 128 MeV, triple scatt. parameter 2=18122
 Mg, elastic, at 14.6 MeV 0=7609
 Mg, elastic, 0.3 MeV meas. 4=12231
 Mg, elastic, polarized neutrons at 2.8 MeV 2=3582
 Mg, inelastic, and excitation, 1-4 MeV 4=17042
 Mg, inelastic, γ -ray spectrum 0=9679, 20502
 Mg, inelastic lattice dynamics det. 2=18524
 Mg rel. to optical model and compound nuclei 2=10112
 Mg, polarization, resonances 2=10101
 Mg, scattering length, coherent 3=25708
 Mg²⁴, elastic and inelastic, 14.1 MeV 4=19789
 Mg²⁴, 14 MeV, first excited level excitation 4=6346
 Mg²⁴, inelastic, with Coulomb interaction 0=9629
 Mg²⁴, inelastic, diff. cross-sections 2=459
 Mg²⁴, inelastic, direct interaction theory 0=11443
 Mg²⁴, inelastic, at 3.25 MeV, n- γ correl. 2=5940
 Mg²⁴(n, γ), medium energy 2=14103
 Mg(OH)₂, lattice vibrations study 3=17643
 Mn, total cross-section, 0.1 eV-50 keV 4=19797
 Mn⁵⁵, γ -ray emission 0=5798
 Mn⁵⁵, inelastic, diff. cross-sections 2=459
 MnF₂, inelastic, by spin waves, cross-section calc. 1=14762

Neutrons and antineutrons—contd
scattering—contd

Mn⁵⁵ and Ho¹⁶⁵, 2, 5, 14 MeV, elastic 3=19828
 Mo, elastic, ang. distrib. and polarization 2=14102
 Mo, elastic, inelastic, 14 MeV, rel. to optical model calc. 3=673
 Mo, elastic, 3.25 MeV, polarization 4=17148
 Mo, at 14 MeV cross-sections 1=17094
 Mo, at 14 MeV, cross-sections 2=22806
 Mo, 0.275-0.85 keV, optical-model analysis 4=9521
 Mo, 2.5 MeV, inelastic 4=12235
 on N, in first-excited state 2=461, 22822
 N, at 14 MeV cross-sections 1=17094
 N, at 14 MeV, cross-sections 2=22806
 N₂, quantum states transition 3=25074
 N¹⁴, at 4.7-8.1 MeV, γ -ray prod. 0=4116
 N¹⁴, 14 MeV, elastic, cross-sections 3=24945
 N¹⁵, elastic, 440 to 1960 keV 4=22146
 N¹⁵, elastic, at 1.9-3.5 MeV, levels in N¹⁶ 1=8625
 N¹⁵, elastic, states in N¹⁶ 1=8590
 N¹⁵, elastic, up to 10 MeV, shell model calc. 4=17146
 N¹⁵(n,n)N¹⁵, elastic, 1.9-3.5 MeV 2=14106
 NH₃, liq., mol. rotation hindrance det. 3=14140
 NH₃, liquid state 0=15360
 NH₃ halides, slow-neutron cross-sections, proton motion study 1=2308
 NH₃K₂I₄·x, rotation of NH₄⁺ meas. 3=15418
 NH₄PF₆, rotation of NH₄⁺ meas. 3=15418
 (NH₄)₂S₂O₈, rotation of NH₄⁺ 3=15418
 NH₄SO₄F, rotation of NH₄⁺ meas. 3=15418
 by Na crystals, inelastic, force consts. 3=15422
 Na, elastic, 0.3 MeV meas. 4=12231
 Na, lattice dynamics study at 90°K 3=2709
 Na, liquid, dynamics, vibrational modes 3=1675
 Na, liquid, slow inelastic, meas. 4=18176
 Na, total cross-section, 0.9-2.1 MeV 4=17161
 by Na, total cross-sections, 2-10 MeV 4=17147
 Na, 2.5 MeV, inelastic 4=12235
 Na²³, diff. cross-sections, 1-350 keV 0=9534
 Na²³, diff. cross-sections, 200-800 keV 0=9681
 Na²³, elastic, 350-630 keV, levels in Na²⁴ 1=8626
 Na²³, 0.5-4 MeV cross-sections 2=14107
 NaI, lattice dynamics, Green's function calc. 4=9824
 Nb, crystal lattice dynamics obs., anomalies 4=3979
 Nb, 0.275-0.85 keV, optical-model analysis 4=9521
 Nb, 0.3-1.5 MeV, differential cross-section 4=6348
 Nb⁹³, inelastic 0=4121
 Nb⁹³, inelastic, calc. and meas., and energy levels 3=15110
 Nb⁹³, inelastic, and excitation, 1-4 MeV 4=17042
 Nd, cross-section using modified neutron spectrometer 0=9380
 Nd, total cross-section, 3.3-5 MeV meas. 4=22158
 Ne, cross-sections for slow neutrons 0=20504
 Ne, natural, thermal neutrons 1=13823
 by Ne²⁰, elastic, 1.6-3.2 MeV resonances 2=16395
 Ng²⁴(n, γ) 4=12232
 Ni-base alloys, magnetic theory 3=12964
 Ni, cross-section 1=19483
 Ni, on d- and f-electrons, in crystalline fields, outer electron config. 0=12028
 Ni, elastic, 0.3 MeV meas. 4=12231
 Ni, elastic, 0.65 MeV meas. 4=12230
 Ni, elastic polarized neutrons at 2.8 MeV 2=3582
 Ni, elastic, 3-25 MeV, polarization 4=17148
 Ni, 14 MeV, elastic large-angle rel. to optical-model calcs. 4=3665
 Ni, inelastic cold neutron scatt., phonon spectrum study 3=25185
 Ni, inelastic, critical 3=3120
 Ni, mag. scattering, polarized neutrons 0=4492
 Ni, 900 keV, elastic 3=2463
 Ni, polarized neutrons, spin wave theory 3=6717
 Ni, potential scattering 1=2218
 Ni²⁺ mag. scatt. cross-section, calc. 1=14667
 Ni^{58,60}, inelastic, and excitation, 1-4 MeV 4=17042
 Ni-Pd alloy, magnetic, rel. to absorbed H 3=5020
 Np²³⁷, total cross-section 1=19492
 O, 14 MeV, n, γ coincidences 3=17476
 O, 900 keV, elastic 3=2463
 by O, 1 MeV, elastic, polarization 3=12680
 O, at 2.9 MeV, spectra and cross-section 2=5924
 O₂, quantum states transition 3=25074

Neutrons and antineutrons—contd

scattering—contd

- by O^{16} , calc. of partial phases 4=6180
 O^{16} , differential cross-section 2-4.11 MeV 2=20633

Neutrons and antineutrons—contd

scattering—contd

- Se, inelastic, 3.4 to 4.6 MeV 1=12203
Se, potential scattering 1=2218
Se, $(2.7-10.0) \times 10^{-3}$ eV, total effective cross-section 2=20630
 Se^{77} , low-energy, width of observed levels 3=4645
 Se^{77} , strength fn., spin var., calc. 4=28036
Si, differential cross-sections, for elastic scatt., 300-800 keV 4=25405
Si, elastic, 2 MeV, ang. distrib. meas. 4=25404
Si, 900 keV, elastic 3=2463
Si, S, Ca, Ti, Fe, Ba, Pb, U, total and differ. cross-sect. calc. from optical potentials 4=28035
 Si^{28} , elastic and inelastic, 14.1 MeV 4=19789
 Si^{28} , inelastic, with Coulomb interaction 0=9629
 Si^{28} , polarization rel. to differential cross-section 2=12198
 Sm^{149} , spin assignments of low-energy resonances, using polarized neutrons and nuclei 3=2468
 Sm^{151} , fission prod., total cross-section meas. 4=17173
 Sm^{152} , resonances, total cross-sections 2=5926
Sn, at 8.3 BeV 2=16416
Sn, at 8.3 BeV 3=6257
Sn, elastic, at 14 MeV, diff. cross-section 0=4127
Sn, elastic, 0.3 MeV meas. 4=12231
Sn, elastic, 0.65 MeV meas. 4=12230
Sn, elastic, at 24 MeV, ang. distrib. 2=3580
Sn, elastic, 24 MeV, polarization 3=6255
Sn, inelastic, γ -ray spectrum 0=9679
Sr, 2.5 MeV, inelastic 4=12235
 $SrTiO_3$, slow inelastic, transverse optic mode study 2=23496
T, elastic, 1-6 MeV, diff. cross-sections 0=17435
T, 5-20 MeV, elastic scatt. calc. 0=9352
by Ta backings to Li targets, background effect 3=2472
Ta, elastic, at 14.6 MeV 0=7609
Ta, elastic, at 15.2 MeV, ang. distrib. 3=2467
Ta, slow-neutron resonance parameters 1=700
 Ta^{181} , inelastic, Hauer-Fleshback model calc. 4=28039
 $Ta^{181}(n, \gamma)$ at 2.95 MeV 2=10114
 $Ta^{181}(n, \gamma)$ at 2.95 MeV 3=6256
Tb, neutron resonances 4=25406
Tb, slow-neutron cross-section 1=2219
Te, elastic, 0.3 MeV meas. 4=12231
Te, elastic, 0.65 MeV meas. 4=12230
Te, at 14 MeV cross-sections 1=17094
Te, at 14 MeV, cross-sections 2=22806
Te, $(2.7-10.0) \times 10^{-3}$ eV total effective cross-section 2=20630
Th, elastic, at 15.2 MeV, ang. distrib. 3=2467
Th, elastic low-angle, at 14.2 MeV 3=22398
Th, small-angle, at 0.8 MeV 2=460
Th, 3.5-13.5 MeV calc. 2=20639
 Th^{232} , average transmission and p-wave strength functions 4=6344
 Th^{232} , fast neutrons, elastic and inelast. 2=10113
 Th^{232} , inelastic, Hauer-Fleshback model calc. 4=28039
 Th^{232} , 0.1-4 keV, total cross-section 4=19802
Ti, diff. cross-section and polarization 0=15569
Ti, elastic, at 14 MeV 0=457
Ti, elastic, at 900 keV, cross-section 2=18327
Ti, inelastic, 3.4 to 4.6 MeV 1=12203
 Ti^{46-50} , slow-neutron scatt. amplitudes 0=9684
 TiH_2 , H_2 conc., temp. effect, meas. 4=29146
Ti-Zr, disordered 3=17644
U, elastic, at 15.2 MeV, ang. distrib. 3=2467
U, elastic low-angle, at 14.2 MeV 3=22398
U, inelastic 0=5801
U, inelastic, energy spectrum 2=3583
U, inelastic, rel. to slowing-down time in water 3=2275
U, inelastic, 13-19 MeV 2=3584
in U layers, secondary spectrum 1=19482
U, natural, 0.3-1.5 MeV 4=3667
on U, scattered-neutron spectrum 1=17160-1
by U, small angle, elastic, 18-120 MeV 3=8105
U, small-angle, at 0.8 MeV 2=460
U, 3.5-13.5 MeV, calc. 2=20639
by U, total cross sections, 2-10 MeV 4=17147
by U^{233} , below 20 eV, elastic cross-section 2=14104
 U^{233} , inelastic, and excitation functions 3=6184
 U^{233} , total cross-section meas., 0.07-10 000 eV 4=17174
 U^{238} , fission energies and 0.9 MeV, inelastic 4=12237

Neutrons and antineutrons — contd

scattering — contd

- U^{238} , inelastic, and excitation functions 3=6184
 $U^{235,238}$, elastic, and transport cross-sections 0=13272
 $U^{235,238}$, inelastic, 8.1-14.1 MeV 3=12683
 $U^{235,238}$, inelastic, at 14 MeV 0=11181
 $U^{235,238}$, 1 keV - 15 MeV, cross-sections 4=12252
 U^{238} , cross-sections, partial and total, 1 keV to 15 MeV 4=25415
 U^{238} , average transmission and p-wave strength function 4=6344
 by U^{238} , below 1 MeV, inelastic 2=5927
 U^{238} , elastic, 0.001-5.6 eV, cross-section calc. 4=17175
 U^{238} , 14.7 MeV, inelastic 3=8104
 U^{238} , 40 keV-16 MeV, optical model calc. 3=4650
 U^{238} , inelastic, cross-sections for low-lying levels 0=13276
 U^{238} , inelastic, energy spectra 0=7621
 U^{238} , inelastic, 14 MeV, rel. to nucleus temp. 2=5925
 U^{238} , inelastic, Hauer-Fleshback model calc. 4=28039
 U^{238} , 0.1-4 keV, total cross-section 4=19802
 U^{238} , rotational-optical model anal. 4=28038
 V, crystals rel. to electron and nuclear polarization 3=18057
 V, differential cross-section and polarization 0=15569
 V, elastic, at 96 MeV, cross-sections 1=697
 V, elastic at 96 MeV, optical model 1=698
 V, inelastic, rel. to phonon spectrum 3=17641
 V, phonon freq. distrib. at several temp. 2=18523
 V, total cross-section 1=17132
 Va, lattice, vibr., and specific heat calc. 4=1400
 W, elastic low-angle, at 14.2 MeV 3=22398
 W^{184} , inelastic, Hauer-Fleshback model calc. 4=28039
 W^{184} , 0.3-1.5 MeV, elastic and inelastic 3=22399
 Y, from Y_2O_3 diff. 3=22391
 Y, inelastic at 3.7-4.7 MeV, nonelastic at 15.2 MeV, ang. distrib. 0=9667
 Y^{89} , low-energy, width of observed levels 3=4645
 Yb, slow-neutron cross-section 1=2219
 YbFe garnet, exchange field splitting 2=23679
 Zn, anisotropic system, dispersion relns. meas. 4=1381
 Zn, cross-section 1=19483
 Zr, differential cross-sections, for elastic scatt., 300-800 keV 4=25405
 Zr, elastic, back-angle, at 14.6 MeV 0=458
 Zr, elastic, at 14 MeV, diff. cross-section 0=4127
 Zr, elastic, 0.3 MeV meas. 4=12231
 Zr, elastic, 0.65 MeV meas. 4=12230
 Zr, elastic, 0.65 MeV meas. 4=12230
 Zr, elastic, 3.25 MeV, polarization 4=17148
 Zr, elastic, Wigner cusp obs. near threshold 3=22394
 Zr, inelastic, 3.4 to 4.6 MeV 1=12203
 Zr, potential scattering 1=2218
 Zr, inelastic at 3.7-4.7 MeV, nonelastic at 15.2 MeV, ang. distrib. 0=9667
 Zr, 0.275-0.85 keV, optical-model analysis 4=9521
 Zr, 0.3-1.5 MeV, differential cross-section 4=6348
 Zr, polarization calc., 3.4 MeV 4=28037
 Zr, total cross-sections 4=19790
 $Zr^{90}(n,n')Zr^{90m}$, to 5 MeV 3=15208
 by Zr, polarizing power for 3.4 MeV neutrons 3=22392

scattering, proton-neutron

- amplitude meas. by mirror refl. 2=9853
 ang. distrib., π -nucleon coupling const., calc. 0=1297
 backward narrow peak, due to $T=1$ and $T=0$ differences 4=9210
 backward peak, narrow, 2-3 GeV, explanation 3=12464
 below 20 MeV, non-S wave effects 3=14986
 charge-exchange cross-section rel. to π -N coupling const. 1=7247
 charge-exchange cross-section, upper limit, at 8.5 BeV 1=16777
 charge exchange, high-energy, ρ -meson Regge trajectory 3=22190
 charge exchange peak, obs. poss. in p-p or n-p elastic scatt. 4=25080
 charge exchange, role of ρ -meson 4=9261
 cross-section meas. in scintillation counter 4=30228
 cross-sections, Chew-Low extrapolation method 3=22129
 cross-sections, 600-1000 MeV, rel. to isotopic spin 1=16770
 and d form factor 3=19712
 deuteron Regge trajectory rel. to n-p scatt. 4=9302

Neutrons and antineutrons—contd

scattering, proton-neutron—contd

- difference from p-p cross-section, rel. to p-n charge exchange 4=16821
 dispersion reln. study at 10 MeV 3=10116
 dynamical effects of molecular electrons 3=1618
 elastic, high energy, backward peak 4=9209
 elastic, obs. poss. of n-p charge exchange peak 4=25080
 elastic, phase-shift analysis near 140 MeV 4=25079
 electron excitation effects, compensation 0=1278
 emulsion nuclei, at 9 GeV, slow pion prod. 3=596
 5 BeV, cross-section 1=12206
 14 MeV 2=3343
 Gelfand-Levitan eqn. 2=16198
 hydrogenous liquids, proton motion, neutron scatt. meas. 4=27165
 rel. to n-d interaction at 90 MeV 0=17340
 9 BeV, inelastic, interpretation 0=11168
 90-630 MeV, elastic, analysis, π -nucleon coupling const. 1=19246
 nucleon current operators, nuclear interact. effect 4=27908
 0.005-0.05 eV by protons in benzene mols., cross sections 4=12011
 below 100 MeV, rel. to polarization 2=1691
 100-300 MeV, evaluated for charge independ. interaction 2=13789
 140 MeV, polarization 2=5655
 phase-shift analysis, evidence for two-pion exchange interaction 1=4807
 phase-shift analysis at 95 MeV 1=13427
 phase shift analysis, test of charge independence 0=11157
 phase-shift analysis, 210 MeV 3=2257
 phase shift calc. 0=17251
 π^0 prod. at 600 MeV 3=15006
 and polarization of Dirac particle, theory 0=5565
 polarization meas. at 126 MeV, 33^0-82^0 c.m. 4=16900
 polarization, rel. to p-p phase shifts 1=4793
 polarization at 23.1 MeV 3=10121
 potential, fit, simple 4=6035
 on protons, π -meson pair doublet 1=13428
 on protons, two-body bound state model 4=16974
 quantum potential approach 1=13360
 "quasi-elastic diffraction" at high energy 1=13413
 quasi-elastic, in p-He interaction at 970 MeV 0=20139
 quasifree, impulse approx. interpret. 3=22128
 quasifree, 140 MeV, R and A parameters 3=22126
 scatt. length in triplet state, rel. to π -nucleon coupling const. 0=15395
 scatter pot. for slow neutrons 2=16198
 semiphenomenological $T=0$ potential 1=12085
 77 MeV, polarization effects 0=7353
 16 and 24 MeV, polarization 2=18120-1
 total cross-section, cold neutrons hydrogeneous cpds 4=9754
 total cross-section at 0.4926 and 3.205 MeV 3=4399
 triple scatt., D_t meas. at 170^0 4=16893
 triplet-even potentials, rel. to one-pion exchange 2=13787
 virtual particles in S-wave state 2=13744
 Wigner's condition 1=5699
 zero-energy parameters computed for different potentials 1=10889
 2.04, 2.85 GeV, ang. distrib. 3=17285
 3.3-7.8 GeV, total cross-sections 2=20331
 10 MeV, rel. to π - π resonances, calc. 4=19504
 10-28 GeV/c, total cross-sections 1=3185
 13.7-350 MeV, phase-parameter representation 1=8461
 13.7-350 MeV, phase-parameter representation 3=585
 22.5 MeV, diff. cross-section 3=2268
 22.5-110 MeV, ang. distrib. 3=10120
 30 GeV cross-section, inelastic 2=18123
 128 MeV, polarization and diff. cross-section 1=501
 142 MeV, phase shifts analysis 3=12454
 143 MeV, asymmetry 1=3182
 200 MeV, cross-section, π -nucleon interaction const. 2=23120
 200 MeV, cross-section π -nucleon interaction const. 3=7866
 210 MeV, P-wave phase shifts, rel. to deuteron photo-disintegration 1=2103
 212 MeV, quasi-elastic, depolarization 2=3335
 217 MeV, proton polarization 2=289
 350 MeV, π -N coupling constant det. 2=18118
 630 MeV, elastic 0=7352

Neutrons and antineutrons—contd**scattering, proton-neutron—contd**

- 630 MeV, π -N coupling const. 0=9407
to 665 MeV, $p\pi \rightarrow p\pi\pi^0$ reaction 0=12934
970 MeV, partial cross-section, from p-d interaction 0=9356

Nickel

- adsorption of Cl 1=20688
adhesion to Cr, at high temperatures 0=4699
adsorption of Cs ion, linear var. of adsorption energy with work function of Ni 4=29196
adsorption of CO and its interaction with O₂ 4=20820
adsorption of CO, meas. using radioactive tracer 0=14152
adsorption of foreign atoms, rel. to surface reconstruction 2=21558
adsorption of H, catalytic, var. with pressure 4=2128
adsorption of H on (110) surface, formation of (2 × 1) structure 2=23922
adsorption of O₂, O-Ni structures on (110) face 2=23921
adsorption of oxygen, contact potential variation 0=2303
adsorption of TiCl₄ 2=19120
adsorption of Xe and H₂, effect on sintering 2=10946
alloys, vaporization, 760°-980°C, 5×10^{-7} to 10^{-9} torr 4=18500
amorphous films, elastic constants 1=5078
annealing, in moist H₂, removal of anomalous mech. props. 3=20722
annealing, X-ray and stored energy investigation 0=21124
atomic mag. moment and elec. resistance, effect of press. 0=11831
atomic scattering factor, in metallic state and in NiO 3=25704
atoms, by cathode sputtering with Hg ions, energy distrib. 4=14770
atoms, electron radial distrib. 3=19934
atoms, isotope shift in arc spectrum 1=5974
atoms, mesic, μ^- decay anomaly 3=15312
atoms, neutral, oscillator strengths 0=20590
atoms, Ni II spectrum, relative osc. strengths 3=10460
in austenite, diffusion, effect on internal friction 3=20695
band structure, effect of spin-orbit coupling 4=28412
band structure, versus Fe. mag. props. effect 4=30543
Barkhausen discontinuities for thermal idealization 4=26292
Barkhausen effect, temp. depend. meas. 4=20537
Barkhausen noise, power spectrum 4=4347
Barkhausen pulses duration in wire 4=13198
bicrystal growth, seed orientation technique 4=23301
bicrystal, in liq. Ni-S, grain boundary grooving 4=15483
Bloch wall energies 0=4491
Bloch wall motion, in mag. and ultrasonic fields 0=16136
Bloch wall stability, effect of divacancies 2=16908
bombard. with Cs⁺ and Rb⁺, ang. distrib. of scattered secondary ions 4=8856
bombarded by A⁺, 10-110 keV, secondary electron emission 2=1494
bombarded with Na⁺, K⁺, Rb⁺, Cs⁺, backscatter rel. to temp. 4=8854
catalysts, oxidation, electron diffraction study 0=4764
cathode Ni, Mg diffusion, heated in reducing atmos. 1=3686
cathode, sintered, Ba evaporation and diffusion rates 0=7132
cathodes, crystal phases, relation to adhesion and emission 3=19131
cathodes, matrix, sintered, elec. and surface props. 0=19715
chemical treatment and boiling, on wire nucleation and heat transfer 4=11422
chemisorption of CO and CO₂, mechanism 2=10980
chemisorption of gases 1=5110
chemisorption of H₂ 1=1480
chemisorption of H₂ and CO, work function, bond 0=18452
chemisorption of N 1=6563
chemisorption of O₂, mechanism 1=20687
coercive force and magnetoresist., cold-rolled strips 0=1786
coercive force, temp. variation after heat treatment 2=737
coercivity, influence of plastic deformation 0=6224
cold-deformed, stacking faults 1=6106
cold welding, structural changes 2=8734
cold-worked and electron irradiated, electrical resistivity recovery 0=15883

Nickel—contd

- cold working and annealing, rel. to elastic limit, hardness, and elec. resistivity 4=13431
cold working, effect on hardness and conductivity, electrical 3=13373
conductivity change in mag. field, elec. and thermal 1=9034
creep, effect of polygonization, 550°, 700° and 900°C 3=20715
creep, effect of substructure 2=21433
creep and fracture 2=10760
creep and fracture at 500°C, prestrain effects 3=13361
creep and fracture, 500°-600°C, impurity effects 3=25631
creep and fracture, role of voids 1=20357
creep, at high temp. 2=18999
creep kinetics, high-temp. of single crystals 4=7440
creep mechanism, structural changes 1=14895
creep, part not revealed structurally, mech. 3=18194
creep resistance after low temp. deformation 2=16959, 21432
creep, rupture, effect of prior strain and polygonization 4=7441
creep, 700°C, effect of previous deformation at 4.2° and 300°K 4=13429
creep in single crystals, meas. 3=20716
creep, temp. and stress effects on deformation components 4=23182
creep tested after deformations at 4.2°, 300°K 2=16960
creep, and time to rupture under load, high temps. 4=7439
cross-section in Ge 1=8942
crystal anisotropy rel. to magnetostriction 2=16917
crystal dislocations, deformed Ni, structure changes on heating 3=17747
crystal electron Fermi surface, from magnetoelec., high field 4=12694
crystal Fermi surface, exchange splittings, one-electron band model 4=9908
crystal Fermi surface, from de Haas-van Alphen effect 4=9907
crystal field splittings of ions 2=3812
crystal growth 4=7537
crystal growth, grain, with boundaries saturated with Ni-S liquid 4=10564
crystal interstitials in films, ion beam prod. at low energies 4=6833
crystallites, in silica gel. Curie temp. reduction 0=10107
crystallization, on Si, hexagonal 3=25666-7
crystallographic substructure of undercooled Ni 4=13652
crystals, coercive force rel. to temp. 2=10653
crystals, deformed, neutron irradiated, mag. props. 2=10652
crystals grown from melt, substructures 3=1271
crystals, mag. stray fields above 71° walls, meas. 3=6707
Curie pt. thermodynamics 3=13244
Curie point of thin films by electrical method of meas. 1=2477
damping capacity, mag. field effects 2=23740
defects distrib., under deformation, thermo-e.m.f. study 1=14247-8
defects, due to cold rolling and quenching investigation 2=12421
deformation ageing, effect on compressive yield stress 1=10216
deformation ageing, theory 3=5072
deformation degree, rel. to cell size of polycrystalline Ni 4=26522
deformation, latent energy, with slight Sn impurities 4=13436
deformation, macroscopic strength inhomogeneity 0=6307
deformation, oriented, mechanism 2=21424
deformation, tensile, crystal geometry 4=26521
deformed, vacancies and dislocations, thermo e.m.f. study 1=14254
degassing props. 2=5088
demagnetization under stress-induced uniaxial anisotropy, wall shift field strength theory 4=30713
dendrite growth velocity in undercooled melts 2=23816
density, liquid and solid 4=18184
deposited layer, epitaxy 1=15012
desorption energy of Ag 3=23521
detection in low-alloy steels 2=10923
diffusion, in Ag 2=3942, 23209
diffusion in Ag 3=22814
diffusion in Ag, poss. surface effects 4=12800-1

Nickel—contd

diffusion in Ag, rel. to solubility 3=13006
 diffusion of Ag, surface 3=20232
 diffusion of CO 970-1320°C 4=22622
 diffusion of Ce vapour, surface ionization 4=30576
 diffusion in Co-Ni alloys, mag. effects, near Curie temp. 3=15514
 diffusion in Cr, 600-900°C 4=15492
 diffusion in Cu and Fe, X-ray det. using thin double layers 2=21053
 diffusion into Cu bicrystal grain boundaries 1=11224
 diffusion in Cu in Cu-Ni powder compact 3=2823
 diffusion of Fe, influence of pores, impurities 2=12462
 diffusion of H, mag. saturation obs. 4=22623
 diffusion of H₂, effect of plastic deformation 0=15869
 diffusion of H₂, meas. from elec. cond. 2=21067
 diffusion of H₂ 970-1320°C 4=22622
 diffusion in liquid Cu, rel. to rate of soln., expt. 4=8194
 diffusion in liquid tin 1=141
 diffusion in MgO, grain boundary, 1350°C 4=20299
 diffusion and mobility of Sb¹²⁴ 3=15511
 diffusion in Ni-Cr alloys rel. to Cr content 4=20302
 diffusion in Ni-Mo alloy 2=6372
 diffusion of Ni⁶³, grain-boundary, meas. 4=20301
 diffusion in NiO, meas. and theory 3=2828
 diffusion in pure Au, meas. 3=8449
 diffusion reaction with S vapour, mechanism 3=1387
 dislocation density, after deformation 1=11206
 dislocation density, in strain, from microhardness data 1=11209
 dislocation distribution after fatigue 2=6335
 dislocation prod. by low-energy ions 3=17723
 dislocation structure, effect of alloying 3=10658
 dislocations, edge, fast moving 2=12433
 dislocations, rel. to stacking-fault energy 3=17744
 distribution in Ge-Pb system and interaction with structural defects 1=17517
 domain magnetization, intrinsic, anisotropy, calc. 0=16133
 domain structure 0=13798
 domain structure in epitaxial films 3=15830
 domain structure, from magnetoelec. data 4=26317
 doping in Ge, generation-recombination noise (350°-100°K) 1=8942
 drawn, texture conditioned surface effect 1=9089
 e.m. wave propagation, in sheets 0=17102
 e.s.r. of Ni²⁺ in irradi. LiF; Ni and NaF; Ni, and complexes 4=28885
 e.s.r. of Ni³⁺ in Al₂O₃, SrTiO₃, Jahn-Teller splitting 4=28879
 effect type II distortions in strengthening 0=18262
 effective charge, in NiAl 2=8839
 elastic modulus variation with mag. field strength 0=11872
 elasticity modules, anomalous, domain structure 2=4309
 elasticity modulus, anomalous, and domain structure 1=20304
 elec. props., rel. to density of states 3=6488
 elec. resistance at low temp., effect of domain structure 4=28529
 elec. resistivity, temp. var. 1=17601
 electric and mag. props., rel. to adsorbed H 4=6929
 electric conductivity, spin-wave scatt. process 4=1553
 electrical breakdown between Ni surfaces in vacuum 4=24724
 electrical resistance of wire, effect of N₂ gas press. 2=10433
 electrode, adsorption of thiourea 2=4499
 electrodeposited, effect of annealing on microstructure and hardness 4=30870
 electrodeposited, growth habits 4=23346
 electrodeposited, mag. props. 2=16916
 electrodeposited, surface texture study 2=17063
 electrodeposition on Au, electron microscope study 1=2554
 electrolytic, crystallite size calc. from X-ray diffraction data 1=12636
 electrolytic films, structure 4=30879
 electron band theory, ferromag. 4=12682
 electron beams, energy rel. to atomic displacements 2=12476
 electron density in 3d-shell 1=20116
 electron density in 3d-shell 2=3866
 electron diff. rings, intensities rel. to wavelength 2=2378
 electron emission charac. in gases 3=418
 electron emission due to Ar⁺ bombardment 3=9843
 electron emission by H⁺ ions at 1-30 keV 3=24347
 electron emission, secondary 2=15948

Nickel—contd

electron emission, secondary, due to Hg ions 4=8625
 electron emission, secondary, from (100) faces, ang. distrib. 0=12633
 electron emission, secondary, on ion bomb., var. mass number 4=24736
 electron emission, secondary, by relativ. primaries 3=16979
 electron range, kilovolt, meas. interpretation 2=12409
 electron secondary emission 2=3077
 electron specific heat and energy bands 0=4267
 electron spin resonance, use in masers 0=2436
 electron states, 3d, two-centre integrals 2=3862
 electronic structure of impurity atom 3=12964
 emissive power, thermal 3=286
 energy band structure, 3d-electrons 3=25234
 epitaxial growth on NaCl cleaved in vac. 4=29070
 equations of state at high pressure 0=11549
 evaporated films, electron diff. study 2=4508
 evolution and diffusion of various gases at 800-900°C 0=12120
 exo- and photoemission of electrons 1=16374
 experimental g' and g values 1=6332
 (100) face, interaction with O₂, struct. 4=23556
 faces, Auger-type interaction with low energy ion beam 4=19093
 fatigue fracture, crack propagation 2=23789
 fatigue, low-temp., and cross-slip 2=6756
 Fermi surface, multiple connectivity 3=4842
 ferromag. band structure, Fermi surface, Green's fn. calc. 4=28417
 ferromag. and Curie temp., crystal lattice size effects 4=26322
 ferromag. domain structure 3=20591
 ferromag. props. rel. to band structure 3=8665
 ferromag. scattering 0=13803
 ferromagnetic anisotropy, 1-electron model 0=4478
 ferromagnetic anisotropy, second const. 3=13246
 ferromagnetic drag bands, on neutron irradi., 28°K 4=13196
 ferromagnetic, Fermi surface evaluation 4=9905
 ferromagnetic initial suscept., var. deformation, temp. 4=22996
 ferromagnetic permeability, stress angle effects 4=13185
 ferromagnetic relax. in films, phonon generation at 9 kMc/s 4°K 4=23035
 ferromagnetic, remanence/saturation mag. ratio, wire, -180 to +100°C 3=23160
 ferromagnetic reson., effect of surface condition and defects 3=1172
 ferromagnetic resonance 3=23203
 ferromagnetic resonance of cold worked Ni sheet 2=12811
 ferromagnetic resonance, effect of H₂ sorption 1=12551
 ferromagnetic resonance absorption of thin films 1=14770
 ferromagnetic resonance, exchange integral 2=4241
 ferromagnetic saturation in deformed f.c.c. crystals 1=20079
 ferromagnetic saturation moment, pressure effect temp. var. 4=7257
 ferromagnetic viscosity, neutron irradi., relaxation time 0=18185
 ferromagnetism, rel. to atomic electron correl. 4=1839
 ferromagnetism, theory 1=3890
 field emission, surface migration processes 3=7629
 filings, structure rel. to deform. stacking faults 2=17014
 film, abnormal optical absorpt. 4=22866
 film on amorphous support, microstructure examination 2=10951
 film, charged with hydrogen, saturation magnetization meas. 2=6670
 films from chemical plating, mag. props. 2=18910
 film, coercive force 0=16139
 film on Cu substrate, electron interference study 1=10263
 film, f.c.c. metals deposited, structure of layer 1=20671
 film on monocryst. Cu layers, dislocation struct. and lattice const. assimilation 4=23589
 film, O₂ chemisorpt. effect on work function 4=23657
 film orientation on Cu substrate, orientation 1=10282
 film on oriented Ag, Pd, Ni, structure 3=1371
 film, structure, evaporated in inert gas, rel. to catalysis 3=20929
 films, absorption, light, oxidation and wavelength effects 3=17991

Nickel—contd

films, adsorption, of CO, var. thickness, temp., from elec. cond. 4=17847
 films, aggregate structure obs. 3=1373
 films, anisotropic shape effects 3=15815
 films, annealing and oxidation, X-ray reflection studies 0=14089
 films, brightness and structure 0=4393
 films, charging with H in presence of catalytic poisons 0=8311
 films, chem. precipitated, structure and mag. props. 3=5013
 films, chemically prepared, mag. structure 2=14791
 films, CO₂ adsorption, -80° to 100°C 2=15103
 films, coercive force during evaporation 2=2286
 films, coercivity, frequency dependence 0=4496
 films, columnar structure, internal microstresses 4=26696
 films, crystal structure 1=7864
 films on Cu substrate, diffusion 2=6373
 films on Cu substrate, mag. props. at low temp. 0=13811
 films, Curie temp. 2=21289
 films, Curie temp. from elec. resist. 4=26320
 films, Curie temp. and Hall effect 0=673
 films, current noise, 77°-400°K 4=439
 films, domain boundary electron optical observation 1=10154
 films, domain structure and imperfections 3=8676
 films, effect of deformation on elec. resistance 2=14494
 films, effect of neutron irradiation on structure and mag. props. 1=19822
 films, elec. cond., chemisorption depend. 0=4313
 films, elec. conductivity 2=6415
 films, elec. resist., effect of O₂ and BaO adsorption 3=20271
 films, electrodeposited, structure 2=10939
 films, electron scatt. at <10 keV, transmission, ang. distrib. and energy spectrum 1=1922
 films, epitaxially grown, mag. props. 1=1231
 films, evap., mag. and structure props., effect of substrate temp. 0=21046
 films, evaporated, bridging phenomenon 4=20743
 films, evaporated, elec. resistance rel. to thickness 4=17477
 films, evaporated on Mo, rotatable anisotropy 2=12676
 films, evaporated, optical absorpt. and polariz. 2=23514
 films, evaporated, single-crystal, internal stresses, effect on mag. props. 3=13344
 films, external structure rel. to annealing 4=10612-13
 films, ferromag. resonance 3=23205
 films, ferromag. resonance and stresses in films 2=12678
 films formed in magnetic field, mag. anisotropy 1=2480
 films, H-loaded, saturation mag. 2=14785
 films, H₂ absorption, temp. depend. 0=6426
 films, H₂ adsorption rel. to electrical resistance 1=11599
 films, ~ 100A, conductivity, electrical up to 300°C, and activation energy 3=15538
 films, induced magnetic anisotropy 4=7273
 films, longitudinal Kerr magneto-optical effect 3=13157
 films, mag. analysis by electron diffraction 3=5014
 films, mag. anisotropy 1=6319
 films, mag. anisotropy 2=12780
 films, mag. domain orientation, thickness depend. 1=10155
 films, mag. domain structure, magneto-resist. data 2=12777
 films, mag. domains, evaporated on cleaved NaCl 3=20931
 films, mag. props., effect of deposited H 2=14787
 films, mag. props., thermal fluctuations 1=7757
 films, mag. structures, electron microscope obs. 2=12784
 films, magnetic anisotropy, rel. to annealing and thickness 4=7272
 films, magnetic coercive force 4=7277-8
 films, magnetic properties rel. to thickness and structure 3=15823
 films, magnetization 0=6235
 films, magnetization measurement 3=17020
 films, magnetization, saturation, effect of electrolytic H 3=20606
 films, magnetization rel. to temperature 3=15821
 films, magnetized, electron diffraction study 0=1799, 4493
 films, magnetoelastic energy 4=22971
 films, magnetoresistance 3=17825
 films, magnetoresistance and coercive force 1=7619
 films, magnetoresistance, Hall effect, room and liquid N temps 4=12862

Nickel—contd

films, magnetoresistance, perpendicular effect 0=15889
 films, monocrystal, growth and mag. props. 1=6318
 films, monocrystal, superlattice structure 3=8835
 films, monocrystalline, mag. anisotropy 1=12530
 films, neutron irradiation effects 3=22869
 films, optical absorpt. 2=11488
 films, optical consts. rel. to wavelength 3=10902
 films, optical Faraday effect 4=22879
 films, orientation and ordering 0=11861
 films, porosity, effects of heating and load 1=20670
 films, preparation and structure 1=12664
 films, resistor thermometer element 0=7005
 films, saturation magnetization, at 3-200 A thickness 0=3062
 films, separated isotopes, by vacuum evaporation 4=10606
 films, single-crystal, Bitter patterns 2=12657
 films, single-crystal, Faraday rotation 2=8489
 films, single-crystal, mag. anisotropy 0=10115
 films, single crystal, stress effects on mag. props. 2=12673
 films, single and polycrystalline, domain structure obs. 3=18089
 films, spin-wave resonance, 15-300°K 4=7306
 films, spin-wave resonance, using microwave phonons 2=18913
 films, sputtered, mag. coercivity and anisotropy, and nitride presence 4=1836
 films, stress, mag. anisotropy 2=10660
 films, stressed, magnetization curves 0=3025
 films, structr. by electron diffraction 3=1369
 films, structure, temp. and environmental effects 4=23585
 films, temp. depend. of saturation magnetization 0=10159
 films, at 10⁻⁵ mm Hg, superparamag. below 20 A 2=8602
 films, thickness, composition, uniformity, by X-ray microanalysis 4=2122
 films, thin, electrical resistivity, rel. to thickness 3=17823
 films, thin, formation 0=8283
 films 20-150A thick, Curie temperatures 1=10160
 films, ultrathin, saturation magnetization and anisotropy 3=15822
 films, uniaxial anisotropy, temp. depend. 2=4227
 films, uniaxial mag. anisotropy 1=3895
 films, uniaxial magnetic anisotropy, time depend. 0=6234
 films, vacuum-deposited, electrical and magnetic properties rel. to annealing 1=10027
 films, vapour deposited, strength rel. to thickness 4=13435
 films, work function 2=9612
 fluctuations, electrical 4=438
 foil, recrystallization, X-ray scattering study 1=5107
 foil, secondary electron emission, energy distrib. 0=5342
 foils prep. as isotope targets 2=17978
 fracture and creep comparison with Ni-Au and Ni-Ag at 500° and 600°C 4=23184
 Frenkel defects annealing after α and d-irrad. 4=22564
 in friction with Ni, Cu and Ag, effect of chemical affinity on adhesion 4=10369
 as Geiger-Müller cathode, work function 0=5438
 gettering effect on Si p-n junctions 0=18032
 "ghost" grain boundaries, use as markers 4=7675
 glowing surfaces, optical pyrometer meas. 0=12537
 grain boundary cracking 0=18278
 grain boundary cracking in creep failure 3=18195
 grain boundary diffusion in impure metal, ridge formation 0=21224
 grain growth kinetics 3=20904
 grain structure, strength, effect of thermomechanical treatment 2=23777
 grain structure, strength, effect of thermomechanical treatment 3=3234
 Grüneisen constant by X-ray methods 4=25866
 gyromagnetic ratio, weakly magnetized sample 0=11924
 Hall coeff., temp. depend. 2=21103
 Hall effect 1=1265
 Hall effect anisotropy, crystal symmetry 3=841
 Hall effect in films 1=7618
 Hall effect and magnetoresistance, anomalous, localized d-electron model 3=827
 Hall effect in single cryst. and polycryst. 3=2853
 Hall effect, temp. dependence to 4.2°K 0=6075
 Hall resistivity, residual 4=20324
 hardening curve, deduction from mag. props. 3=3231
 hardness, effect of crystal props. and grain substructure 2=23791
 hardness, effect of electrolytic H 3=3245

Nickel—contd

- heat fatigue, and grain struct. and dislocations 4=23179
 heat treatment of laminations, variation of anisotropic coercive force 1=6315
 heat treatment, tempering, temp. between cylinder centre and surface 3=9641
 i.r. resonance absorption 0=10046
 initial magnetization, effect of tension and pressure 1=20106
 interdiffusion with Cu and Co, meas. analysis 4=12789
 internal field, rel. to Ni^{61} mag. moment. 2=13970
 internal friction, in alternating magn. field 0=13814
 internal friction, cold-worked metal 2=21407
 internal friction, crystal interstitial rot. effects on peak 4=28968
 internal friction, heat treatment effects 4=23178
 internal friction peaks in stage III recovery 4=26523
 internal friction, sintered and plastically deformed spec., temp. depend. 1=9084-5
 internal friction, temp. depend. 1=3962
 interstitial atoms, rel. to internal friction and mag. susceptibility 1=3659
 interstitial in Si distrib. rel. to elec. cond. var. 4=28453
 intrinsic magnetization under high pressures 2=14771
 ion beam, energy loss in metal foils 0=3814
 ion bombardment at oblique incidence, etch effects 1=4672
 ions, Ni^{17} , confirmation of existence 0=2320
 ions, Ni^{2+} , e.s.r. in $\alpha-Al_2O_3$ 2=4263
 ions, Ni^{2+} , e.s.r. in MgO , pressure effects 1=7786
 ions, Ni^{17} , e.s.r. in NaF 0=21076
 ions, Ni^{2+} and Ni^{3+} , e.s.r. in TiO_2 2=8672
 ions, Ni^{2+} , spin polarized, electron densities and mag. form factors, unrestricted Hartree-Fock method 0=20769-70
 ions, Ni^{3+} , in corundum, spectra 2=14677
 ions, paramagnetic resonance in double-nitrate crystals 3=6749
 ions $Z = 2$ to 13, range 2=7674
 irradiation damage by Kossel line studies 2=10429
 irradiation effects, study using mag. props. 2=21084
 irradiation hardening 1=1004
 isotopes, pairing correlations, wave functions, simplified, and moments of inertia 4=21987
 K-absorption spectrum of irradiated Ni 0=13471
 K-edge position, X-ray meas. 2=17030
 K-shell fluorescent yield 0=15652
 "Kanigen" phase, atomic structure, X-ray study 4=7674
 laminated, intense sound generation by magnetostriction 1=9444
 lattice distortion and particle size, X-ray diffr. data 0=6354
 lattice dynamics, neutron diffn. by phonons 4=28359
 lattice extension meas. by X-ray method, anisotropy effects 1=10256
 lattice isotopic effect, temp. dependence 2=16612
 lattice isotopic effects, temp. dependence 3=6482
 layer, separated from Al, tunnelling current 3=6489
 layers, electrodeposited, gauging method 1=12839
 layers, electrolytically-deposited, orientation and morphology 3=18234
 layers of Se on Ni, phase transformations $20^\circ - 400^\circ C$ 2=12879, 19027
 light emission on H^+ bombardment 2=3970
 liquid dilute solutions in Pb, density measurement 1=18388
 liquid, pure, solubility of H_2 4=5157
 liquid, viscosity 3=14115
 liquid, X-ray investig., intensity curve 4=21096
 low-temp. pyromagnetic measurements 1=6275
 mag. anisotropy and losses of thin layers 1=6276
 mag. Curie pt. lowering by added Ge 2=734
 mag. domains, made visible by magneto-optical Kerr effect 1=1224
 mag. films, anisotropy, temp. var. 4=7275
 mag. props., at low temp., effect of chemisorbed H_2 0=3070
 mag. props. rel. to plastic deformation 3=3231
 mag. resonance, temp. depend, wires, annealed 3=15793
 magnetic anisotropy constant, temp. and magnetization depend. 4=28821
 magnetic anisotropy, temp. variation 0=13838
 magnetic anisotropy of wires under small torsion 3=20577
 magnetic coercive force, rel. to temp., orient. and plastic deform. 2=18904
 magnetic coercivity of films, frequ. and temp. depend. 4=7280

Nickel—contd

- magnetic coercivity, plastically deformed 1=2471
 magnetic contrib. to elastic constants 0=3065
 magnetic domain wall thickness 2=13648
 magnetic domains, temp. var. magneto-optical obs. 3=23165
 magnetic field, local, at impurity Fe^{57} nuclei, using Mössbauer effect 0=11826
 magnetic film anisotropy, domain rotation obs 4=26321
 magnetic films, intensity temp. var., depending on deposition 4=22997
 magnetic internal field, Au^{197} Mössbauer data 3=6458
 magnetic moment distrib. 3=1110
 magnetic props., effect of absorbed H 1=14720
 magnetic properties 1=14692
 magnetic saturation, high pulsed fields 4=19154
 magnetic saturation moment decrease by H chemisorption 4=22949
 magnetic scattering, of polarized neutrons 0=4492
 magnetic sp. ht., effect of elastic modulus relaxation 4=25856
 magnetic stray field over (110) faces 4=1835
 magnetic, stray fields above Bloch walls, meas. method 3=19402
 magnetic susceptibility, electronic sp. ht. 3=23143
 magnetic susceptibility at γ/d and melting point 3=8654
 magnetic susceptibility, recovery after cold working 1=11442
 magnetic susceptibility, var. with adsorption of H, catalytic 4=2128
 magnetism, electronic model 1=20039
 magnetism of small particle, electron beam meas. 1=10755
 magnetism of thin film 2=6662
 magnetization curves, calc. 1=10145
 magnetization, deviations from $T^{3/2}$ law, meas. and spin-wave theory 4=7274
 magnetization distribution, domain boundary layers 3=25530
 magnetization, effect of chemisorbed H 1=11432
 magnetization, effect of quenched-in vacancies 2=2274
 magnetization, exchange parameters, $4.2-70^\circ K$ 4=20545
 magnetization of films, effect of uniaxial anisotropy 4=26319
 magnetization, influence of electrolytic charging of H 2=738
 magnetization, intrinsic, press. depend. 3=6700
 magnetization at low temp. 1=1208
 magnetization reversal on cold rolling of tapes 4=13208
 magnetization, spontaneous, action of conduction electrons 2=10647
 magnetization spontaneous moment, rel. to temp., 1.4° to $5^\circ K$ 3=15792
 magnetization, spontaneous, pyromag. test of spin wave theory 2=12684
 magnetization rel. to stress & temp. compared with Permalloy (94%Ni) 3=1142
 magnetization, temp. hysteresis 3=3101
 magnetization of wire and effect of torsion 1=6282
 magneto-acoustic props., u.s. 2=12379
 magnetocrystalline anisotropy rel. to field strength 3=20581
 magnetoelastic consts., calc. 1=17969
 magnetoelastic coupling, static, analysis 3=6701
 magnetolectric effects, high-field meas. 3=25330
 magneto-optical const., u.v., i.r. and visible regions 0=6171-3
 magneto-optical effects rel. to optical consts. 3=10918
 magneto-optical and optical props., i.r. 3=10919
 magneto-optical reflectivity change on magnetization reversal 4=22871
 magnetomechanical effects, heat treatment effects 4=23180
 magneto-optical resonance, in u.v. 2=23533
 magnetoresistance, dynamic loops, cold worked, low temp. 4=12861
 magnetoresistance, high-field, in single crystals 3=15553
 magnetoresistance of plastically deformed Ni 4=28533
 magnetostriction, anisotropy of ΔE effect 2=4230
 magnetostriction constant, influence of plastic deformation 1=14727
 magnetostriction, effect of elastic deform. 2=16915
 magnetostriction and magnetization jumps 3=8664
 magnetostriction meas. up to 10^4 atm 3=1150
 magnetostriction, -196 to $365^\circ C$ 1=1225
 magnetostriction, plastic deformation 0=1800

Nickel—contd

magnetostriction, saturation, after low-temp.
anneal 2=23671
magnetostriction, temp. hysteresis 3=3101
magnetostriction of thin films 4=30714
magnetostriction, var. with plastic deformation 4=1837
magnetostrictor, resonance under compression 2=2847
mass stopping power to α -rays 0=19039
mech. props. below 4.2°K, effect of preliminary plastic deformation 0=21122
mechanical props., effect of H₂ 4=13430
mechanical props., 1.6-4.2°K 0=18241
mechanical props. of single crystals rel. to neutron irradi. 3=8467
metal-insulator-metal, press. transformation, due to electronic level shifts 4=6928
microstresses due to plastic deformation 0=10263
molten, viscosity 0=14580
monatomic adsorbed layer, detection 2=6852
Mössbauer effect in embedded Au¹⁹⁷ 1=11147
Mössbauer effect with Ni⁶¹ 1=5830
Mössbauer effect, velo. var., mag. field effects, Ni⁶¹ 4=12582
n.m. relax. rate theory and internal mag. field 4=23062
n.m.r. and Bloch wall thermal movements 2=10716
n.m.r., longitudinal, model and expt. 3=3197
n.m.r. of Ni⁶¹, saturation behaviour 3=25592
negative ΔG effect and magnetic damping capacity 4=4476
neutron bombarded, strengthening 4=23165
neutron critical scattering 3=1117
neutron form factors, spin density distrib., Hartree-Fock calc. 3=1103
neutron irradi. effects on films, phase change and mag. props. variations 0=10338
neutron irradi. effects on physical properties 1=10021
neutron irradi., structure 0=1917
neutron radiation damage effect on mag. props. 1=14730
neutron scatt., inelastic, critical 3=3120
neutron scatt., polarized, spin wave theory 3=6717
nickel tube diffusion leak for hydrogen purification 1=12405
99.95% pure, enthalpy 1120°-1919°C 3=8359
nodules, superparamagnetic, particle size determ. with Guinier high-resolution camera 4=4651
nuclear mag. resonance of Ni⁶¹, internal field meas. 1=1281
nuclear polarization of Mn⁵⁴, temp. var. 4=3967
nuclear Zeeman effect of Au¹⁹⁷ rel. to mag. field 4=9811
nucleation of whiskers 0=16274
(100) faces, bombard. by Ar⁺, Ne⁺ 3=13020
optical constants meas. 2=16802
optical props. and Fermi surface model 3=25331
outer electrons, in crystalline field, X-ray and neutron scatt. on 0=12028
oxidation by ion bombardment 0=10988
oxidation mechanism 4=13710
oxidation and reduction, using gas reactor for transmission electron microscopy 4=29220
oxidation, study by secondary electron emission 2=11700
paramag. resonance of Ni²⁺ in MgO, Ni⁶¹ nuclear moment det. 0=15513
paramagnetic props. up to 1500°K in polycryst. 4=1804
paramagnetic resonance linewidth above Curie pt., theory 2=4259
paramagnetic, super, spontaneous mag., grains, temp. var., 77-600°K 4=4332
paramagnetic susceptibility, effects of s-d exchange 1=14674
peak electron density, curvature 1=15064
permeation, diffusion and solubility of H and D 1=6114
permeation, diffusion and solubility of H and D 1=11227
permeation of H₂, 400° to 900°C 2=12457
phase transform., neutron effects 4=23282
phonon spectrum, from cold neutron scatt. data 3=25185
photoelec. emission, effect of oxygen 0=19720
photoelec. emission in extreme u.v. 4=3032
photoelectric emission, temp. var., anomalous near Curie point 4=3031
photoelectric yield, 3000-250 Å 3=21865
photoelectron yield from soft X-rays 1=2990
plastic deform. and annealing, intercrystal slip 4=13432
plastic deform. of tubes, anisotropy due to earlier loading 1=20331

Nickel—contd

plastic deformation, effect on diffusion rate in Ni-S system 1=983
plastic deformation and slip-line studies 4=4478
plastic deformation, mag. and electron micr. studies 4=4477
plastic yield stress, effect of strain rate 4=4481
plastically deformed, abrasive wear 4=7438
plastically deformed at low temp., crystal lattice distortions, kinetics of relief 4=6847
plastically deformed, neutron irradi. effect, ferromag. meas. 4=10394
plastically deformed, substructure, expt. 4=10587
plated deposits, structure 3=13450
point defect clustering 3=22721
polycrystalline characteristic temperature, 20°-600°C 3=17661
polycrystalline, magnetization meas. near saturation 0=13807
polycrystalline specimens, plastic deformation 2=12853, 14881
polycrystalline wires, var. of remanence with stress 0=6238
polycrystals, Cottrell-Stokes flow stress law validity 4=23203
porous, dynamic compression 2=14876
porous, dynamic compression 3=6787
Portevin-Le Chatelier effect in H₂ charged Ni 4=15711
positron annihilation with electrons in plastically deformed and annealed Ni 4=28434
powder, adsorption isotherms of H⁺ and OH⁻ aqueous ions 4=4674
powder, annealed, and block, cold-worked, X-ray line broadening, rel. to variance 4=23382
powder, X-ray line broadening 1=7889
powdered, Bloch wall suppression, n.m.r. study 3=15805
precipitation from Ge 2=19099
precipitation in Si 3=6537
radiation effects on mag. props. 0=2994
Raney, diaphragm resistance of porous layers 4=26758
range-energy rel. for heavy ions in foil 0=17051
reaction with Cl₂ at high temp. 4=13723
recovery from cold working, elec. resist. study 2=23774
recovery after irradi., plastic deformation or quenching 2=14898
recovery and recryst. after deformation 2=10765
recrystallization centres, growth kinetics 3=20794
recrystallization, electron-microscope study 0=21258
recrystallization, grain growth and self-diffusion activ. energy 1=9108
recrystallization of ground powder, X-ray meas. 4=10575
recrystallization after plastic deform., time var., microscopic obs. 4=26604
recrystallization temp. lowering, by zone refining 3=18263
reflectivity, time var. 0=7998
removal from Ge 0=12231
removal from Ge by Pb "gettering" action 0=12231
resistance to deformation, time-dependence 1=1337
resistance, elec., effect of ambient gas pressure 1=7613
resistance, electrical, and work function, effect of adsorption of electropositive atoms 3=13040
resolidified drops, voids 1=20631
rotational hysteresis, rel. to cold rolling and recrystallization 3=18076
in sapphire, paramagnetic resonance absorption 0=11948
secondary electron emission, due to Xe⁺, Ar⁺, Ne⁺ and He⁺, theory 0=1152
secondary electron yield, due to Xe⁺, Ar⁺, Ne⁺, He⁺ 0=1153
secondary emission, Zn and Cd ion bombard. 0=12632
self diffusion 0=2826-7
self-diffusion in NiS, expt. and theory 4=12798-9
self-diffusion, 929-1303°C 4=12797
self-diffusion, on surface 1=19804
shear modulus and damping, effect of a magnetic field 4=4476
shear modulus, rel. to deform. amplitude 3=6779
shear modulus and internal friction, temp. var. 3=3209
shock compression up to 9×10^6 atm. 2=6728
shock compression up to 9×10^6 atm. 3=6786
single crystal magnetic moment meas. 0=2985
single crystals, Bragg reflection of neutrons 2=19069

Nickel—contd

- single crystals, reversible susceptibility, rel. to magnetizing field and crystal orientation 3=20572
 single crystals, sputtering by 27eV A ions 1=10745
 single crystals, sputtering by 27eV A ions 1=11985
 single crystals, sub-structure 2=6859
 sintered, U.T.S., temp. depend. 0=1866
 sintering of Ni-Cu mixtures, effect of grain surfaces 4=10593
 skin effect, i.r. data 0=6078
 in solar corona, relative abundance 4=29458
 solid solubility in Si 4=4497
 solubility in Be, X-ray diffract. study 3=20908
 solubility in liquid Na, Ni⁶³ tracer technique 2=5008
 sound effects in pulse magnetization 4=10264
 specific heat, magnetic, const. coupling approx. 4=30522
 specific heat, 180-1160°C 0=9853
 specific heats, normal and supercond. 2=19817
 spectrochemical anal. 2=19177
 spherical crystals, growth nickel oxide 0=1894
 spin-lattice relaxation time, calc. 0=13865
 spin-spin relaxation time 1=12553
 spin-wave resonances in films 1=14771
 sputtered by Hg⁺, ang. distrib. 0=1174
 sputtered magnetic films, props. 1=6325
 sputtering, under Cs ion bombard., cathode sputtering ratio 4=24753
 sputtering, ejected atom distrib. 2=13608
 sputtering by inert gas ions 1=18950
 sputtering by inert gas ions rel. to mass ratio 4=19124
 sputtering, by Ne⁺, Ar⁺, Kr⁺, Xe⁺ ions, 100-1000 eV 3=4216
 stacking faults, prod. by plastic deform. 3=20206
 stored energy after cold working at liquid N₂ temp. 1=14906
 strain-ageing meas. on stress-strain curves 4=13433
 strain ageing, rel. to temperature 3=13350
 strain relaxation by irradiation 2=23768
 strength, long-term, effect of thermomech. treatment 3=8778
 stress/strain discontinuities, temp. rate, var. 4=20675
 stress/strain at 1.4-77°K 1=12594
 stresses, residual, in electrodeposited coatings, X-ray determ. 4=23181
 stresses, residual, rel. to surface flow stress 2=8730
 structural changes during deformation at high temp. and strain rates 2=2320
 structural changes on heating cold-worked metal 1=978
 structure, influence of N impurity 1=19770
 sub-microstructure, effect of plastic deformation 0=16253
 substrate, for electrodeposition of Permalloy films 4=7283
 substructure formation, during high temp. high strain rate deformation 4=26492
 supercond. films, crit. current, var. temp., mag. field 4=21422
 superconducting energy gap, tunnelling meas. 4=16374
 superconductive two-component diffusion films containing Sn 4=5527
 superconductivity and ferromagnetization 0=14932
 superparamagnetic, temp. depend. of spontaneous magnetization 1=6307
 surface atoms vibr. and electron diffr. 2=19127
 surface, catalytic action in atomic beam recombination 2=4522
 surface diffusion of Sn 2=21068
 surface diffusion of Sn 3=6539
 surface energy and self-diffusion activation energy 1=15171
 surface exam., groove walls—poorly defined (100) facets, by optical-goniometer meas. 4=30813
 surface interaction of O₂ with (111) face 4=7702
 surface, (110), clean and slightly contaminated, study 1=20658
 surface oxidation temp. effects on water boiling on wire 4=11423
 surface tension, rel. to crystallographic orientation 2=4485
 surface tension, effect of Ti and TiC 4=8190
 surface texture, effect on emissivity, thermal, and accommodation 4=2126
 surfaces, catalysis of H₂-D₂ exchange 2=6871
 surfaces, contact potential, treated with electrolyte solutions 4=26008
 surfaces, interaction with N 2=8894

Nickel—contd

- temp. change at boundary with superfluid He 3=5570
 temperature change at boundary with superfluid He 2=15838
 temperature dependence of elastic constants 1=10202
 tensile strength of whiskers 2=23778
 thermal conductivity, impurity concentration effect 1=9987
 thermal diffusivity, capacity and conductivity, meas. by flash method 1=13006
 thermal and elec. cond. in mag. field, low temp. 3=8489
 thermal expansion 3=4825
 thermal expansion, effect of annealing 2=20938
 thermal expansion, lattice const. changes, from Bradburn-Fürth eqn. of state 4=20219
 thermal expansion, 20-500°C 3=2735
 thermionic emission, in CCl₄ and Freon 0=10936
 thermionic emission of ions, effect of ambient gas 3=14663
 thermionic emission of positive mol. ions 3=3086
 thermionic emission, in vacuo 0=10972
 thermoelectricity meas. below 1°K 0=18076
 thermo-magnetic analysis, electron diffraction method 1=18973
 thick films, mag. props. of layers electrodeposited in magnetic field 0=21043
 thin film saturation induction meas. 0=3061
 thin film, slow magnetization process 1=1230
 thin films, anisotropy rel. to magnetic annealing 2=8641
 thin films, elec. resist. rel. to temps. and Hall e.m. force, 2° to 300°K 3=832
 thin films, electrical props. at 300°K 2=3985
 thin films, electrical props. at 300°K 3=4905
 thin films, lattice const. 1=20669
 thin films, mag. props. 0=13813
 thin films, mag. props. rel. to cathodic hydrogen 3=1075
 thin films, mag. props. rel. to pressure during evaporation 3=1072
 thin films, spin-wave res. 3=1169
 thin layers in alternating mag. field, inner attenuation 0=4495
 thin layers, ferromag. Curie point 3=1077
 transducers, magnetostrictive-stack, radiation resistance 0=19289
 triton range, 0.2-2.7 MeV 3=10180
 tubes, deviations from plasticity laws 1=5082
 tubes, deviations from plasticity laws 1=10211
 tubes, strength under various loads 1=6467
 twinned cubes, by high temp. reduction by NiCl₂ in KC1 3=5078
 twinning, mechanical 3=25621
 two magnon spin-spin relax., model 3=1193
 u.s. damping meas. 2=13418
 u.s. propag., at high mag. field 4=20202
 u.v. and visible radiation, by H ion bombardment, 200 keV 3=7657
 valence band emission spectra, M_{2,3} band shape 1=1173
 vaporization, heat of, at 298°K 3=1876
 vapour, interdiffusivity with Ar at high temp. 4=24266
 vapour pressure and evap. coeff. meas. 2=19784
 vibration, normal modes, freq. distrib., meas. using neutron scattering 4=28360
 wall motions, reversible, distrib. functions of activation fields 0=6230
 whiskers, field emission, elec. meas. 2=8799
 whiskers, tensile rupture tests 3=6801
 whiskers, by vapour deposition 2=8798
 wire, anomalous magnetic susceptibility 1=20077
 wire, elastic moduli, effect of 60 c/s mag. field 3=15970
 wire, time decrease of reversible permeability 4=26318
 wires, hydrogen supersat., elec. cond. 2=23236
 wires, stressed, magnetization in a.c. fields 0=679
 wires, thermal relax., rel. to current and surrounding gas pressures 2=14398
 wires, thin, magnetization process and domain struct. 3=1087
 work function ψ , ferromagnetic anomaly 1=14693
 work function, photoelectric, cathode fall, in Ar, Ne 4=568
 work function, 720-1025°K 0=19709
 work function, temp. depend. 1=8340
 work function temp. dependence 0=9063
 work function, temperature coefficient 0=19708
 work function, var. O press. and temp. 4=19076

Nickel—contd

- work hardening meas. by torsion to large strains 4=7389
 work-hardening of polycryst. Ni, meas. 4=28969
 X-ray absorption edge 2=6587
 X-ray emission spectrum, $M_{ii,iii}$ intensity distrib. 1=3514
 X-ray K-absorption edge, proton irradiation effect 2=14698
 X-ray K-absorption spectrum meas. 4=17562
 X-ray M bands from Cu-Ni system 3=23087
 X-ray scatt. factor, and electronic charge distrib. 4=25506
 X-ray, soft, emission, critical potentials 1=20001
 X-ray spectrum, emission, K edge Kronig struct., H diffusion effects 4=17577
 X-ray spectrum structure at short wavelength limit 1=6217
 yield point, rel. to ageing 2=4325
 yield point, temp. dependence rel. to purity 3=5066
 Young's mod. and internal friction 0=11971
 Young's modulus, ultimate strength, meas. 2=18975
 Young's modulus, variation during heat treatment 0=6292
 Young's modulus data, rel. to temp. 4=30788
 zone structure, rel. to mag. and thermoelec. props. 1=19914
 zone structure, rel. to mag. and thermoelec. props. 2=6506
 Ba-coated, reversed thermionic emission 3=21860
 Ba-coated, thermionic emission, theory and expt. 3=21859
 Br surface reaction, press. and temp. var. 4=10636
 Cu-Ni powder compacts, interdiffusion, X-ray diffraction study 1=11225
 Ni on NiO, magnetic exchange anisotropy interactions 4=13209
 Ni^{81} in Al_2O_3 , electron nuclear double resonance 4=7334
 Ni^{63} , diffusion in PbS 3=17785
 Ni^{+} e. s. r. in CaO, Jahn-Teller effect 4=13327
 Ni II, d^8 p config. 1=806
 Ni^{2+} , in AgBr, AgCl, paramag. reson. and relax., liquid H temps. 3=13307
 Ni^{2+} , in aqueous solutions, proton spin-lattice relaxation 1=15908
 Ni^{2+} , e. s. r. in CaO 3=3181
 Ni^{2+} , e. s. r. in $NiSiF_6$, temp. depend. 4=13328
 Ni^{2+} , grain-boundary diffusion in MgO 4=20300
 Ni^{2+} ions in methanol, proton relaxation and methanol exchange rate of solvation sphere 4=18219
 Ni^{2+} , line broadening of P^{31} n.m.r. absorpt. in H_2PO_4 3=13316
 Ni^{2+} , mag. suscept. in ZnO and CdS 4=17616
 Ni^{2+} in MgO, u.s. pulse interaction with spin resonance 4=26415
 Ni^{2+} n.m.r. in methanol and methanol-water mixtures 4=14190
 Ni^{2+} in organic solvents, NaCl and KCl, optical props. 3=10923
 Ni^{2+} , spectrum in $KNiF_3$, and $KMgF_3$ analysis 4=12574
 Ni^{2+} , spin level splitting, Jahn-Teller effect 3=10452
 Ni^{3+} , e. s. r. in $SrTiO_3$ 4=26417
 Ni_2 vapour dissociation energy, and heat of sublimation for $2Ni(solid) = Ni_2(gas)$ 4=28272
 O and H absorption on (110) face, elec. diffraction study 3=1378

Nickel compounds

- alloys, binary, with Al, Cu, Co, grain shift and boundary migration 3=2815
 alloys, high, elastic consts., from u.s. velo., wedge method 3=23277
 alloys, internal field rel. to Ni^{61} mag. moment 2=13970
 alloys, magnetism, electronic model 1=20039
 alloys, superconductivity 3=16873
 Alumei, magnetic hysteresis loops, eddy-current broadening 3=15790
 arsenide type, mag. anisotropy energy 2=2278
 boride and carbide, anomalous thermionic emission, theory 0=2377
 carbides, ternary, with Sn, Zn, structure 0=16324
 chelate, e. s. r., Ni^{2+} splitting in crystal field 0=3135
 constantan, torsional elastic modulus 2=8698
 dihalides, linear symmetrical, mean amplitudes of vibr. and Bastiansen-Morino shrinkage effect of $T = 1000^\circ K$, $1250^\circ K$ and $1500^\circ K$ 4=30441
 EI-437A alloy, precipitation 3=8913
 EI-437A, precipitation by anodic dissoc. 3=8913
 EI-437A, thermal expansion, $20-500^\circ C$ 3=2735
 EI-437B, effect of liq. Na adsorpt. on deform. 4=23185
 Evanohm, cond., elec., $10-380^\circ K$, wires 4=12849

Nickel compounds—contd

- ferrite aluminate, ferromagnetic resonance 0=10197
 ferrite, anisotropy prod. by rotary field tempering 3=15892
 ferrite, atomic displacement due to thermal agitation and local distortions 2=3913
 ferrite-chromites, ferrimagnetic resonance 0=6254
 ferrite, Co-substit., field-induced anisotropy 2=12791
 ferrite, effective anisotropy constant 2=8653
 ferrite, elec. resistivity 0=7945
 ferrite, polycryst., ferrimag. resonance 2=10690
 ferrite, res. curve width rel. to Co and Cu ions 2=760
 ferrites, induced magnetic anisotropy, rel. to composition 4=13243
 ferrites, mixed, permittivity, a.c. fields rel. to temp. 1=10081
 ferrites, mixed, permittivity in a.c. fields rel. to temp. 1=11329
 fluoride, molten, absorption spectra 0=19155
 fluorosilicate, paramag. resonance line shape, temp. depend. 0=16156
 fluosilicate, paramag. relaxation, $4.2-1.8^\circ K$ 0=10234
 gersdorffite, $NiAsS$, mag. susceptibility and elec. cond. 4=7220
 halides, vaporization, dimer formation 0=3566
 hexamine halides, low-temp. magnetic transitions 1=7775
 Hipersil cores, permeability, loss meas. 2=14795
 hydride, structure 2=15028
 Inconel, oxidized, emissivity, $1.5-15\mu$ 0=16917
 Inconel, oxidized, heated to $1000^\circ C$, spectral emittance 4=14443
 Inconel, total hemispherical emittance 3=289
 Inconel-X, electron microscope obs. 3=20872
 Invar, internal friction, temp., C-content and magnetization depend. 3=3217
 Invar, isothermal holding, internal friction, magneto-diffusion effect 3=3216
 Invar, mag. anisotropy energy, temp. and field depend. 2=23648
 ions, Ni^{2+} in oxides, paramag. suscept. 2=18892
 mag. form factor of Ni^{2+} , orbital contrib., neutron scatt. cross-section 1=14667
 Monel, Curie point, by simple balance method 3=8636
 Mumetal, heated in air, surface structural irregularities 0=18394
 Mumetal, ferromagnetic after-effect 0=8042
 Nicaloi, ferromagnetic permeability, stress angle effects 4=13185
 Nichrome, cold-deformed, stacking faults 1=6106
 nichrome, deformed, crystal dislocations, structure changes on heating 3=17747
 Nichrome films, vacuum dep., strain sensitivity 3=23514
 Nichrome (Kh20 N80), plastic deformation, "relay race" transmission 2=23759
 Nichrome, phase transform. volume changes 3=20885
 Nichrome, recrystallization nuclei formation process 4=13474
 Nichrome, tensile strength, in K-state 1=12584
 nichrome, thermal expansion meas. 4=17367
 Nichrome thin films, electrical props. rel. to crystal structure 4=10030
 nichrome wire, in centre of glass pipe, water cooled, burnout 3=9661
 nickel oxide layers on nickel, structure 1=1458
 Nimonic 80A, creep cracking 1=141
 Nimonic 80A, relaxation creep 4=23190
 Nimonic-type alloys, ageing, rel. to structure changes 3=16113
 nitrate hexahydrate, optical props and unit cell parameters 0=7991
 nitrides, mag. and crystallographic props. 0=11830
 nitrides, phase transformation by N insertion 3=1322
 oxidation mechanism 4=13710
 oxide, photoelec. emission, effect of hydrogen 0=19720
 permalloy, anisotropic, torque, angular dependence 1=14723
 permalloy with Au, for high-speed magnetic switching 1=10166
 Permalloy C, Barkhausen noise, power spectrum 4=4347
 Permalloy, electron interference in domains 2=15962
 Permalloy, ferromag. films, comments 4=23564
 permalloy, ferromagnetic anisotropy, uniaxial 1=17962
 Permalloy film, longitudinal Kerr effect 4=4265
 Permalloy films 3=15819
 Permalloy films, ang. dispersion of easy mag. axis 2=12654

Nickel compounds—contd

- Permalloy films, anisotropy 0=3054-8
 Permalloy films, anisotropy 4=17658
 Permalloy films, anisotropy and inversion 0=11869
 Permalloy films, annealing behaviour, temp. dependence of mag. props. 1=6320
 Permalloy films, annealing, effect on mag. props. 1=7755
 Permalloy films, Barkhausen pulses duration 4=13198
 Permalloy films, cathode-sputtered, props. 1=6324
 Permalloy films, by cathode sputtering, micromag. structure 2=15094
 Permalloy, films, coercivity and conductivity, electrical 3=13041
 Permalloy films, computer elements 0=7190
 Permalloy, films, conductivity, electrical, and coercivity 3=13041
 Permalloy films, domain structure and preferred-axis dispersion 3=15812
 Permalloy films, domain structure changes 3=18088
 Permalloy films, domain study 0=3049-50
 Permalloy films, domain-wall storage and logic 2=13636
 permalloy films, domain walls, observation by Faraday effect 1=10151
 Permalloy films, domains, reversed, nucleation and growth, study using partial switching 4=23003
 Permalloy films, e. m. wave absorpt. by spin interaction with stripe domains 4=28697
 Permalloy films, effective magnetization, anisotropy 3=20596
 Permalloy films, electrodeposited, anisotropy sources 2=12655
 Permalloy films, evap. at oblique incidence, mag. anisotropy 0=18183
 Permalloy films, evap., roughness 2=12658
 Permalloy films, evaporation, microbalance meas. 4=5263
 Permalloy films, ferromag. reson. at 36 kMc/s 4=7307
 Permalloy films, ferromag. resonance 2=10685
 Permalloy films, ferromag. resonance 3=20633
 Permalloy films, ferromag. resonance 3=20633
 Permalloy films, ferromag. resonances 2=12672
 Permalloy films, ferromagnetic relaxation, u.h.f. absorpt. in l.f. field 4=1827
 Permalloy films, ferromagnetic reson., standing modes, k^2 field spacing var. 4=13280
 Permalloy, films, ferromagnetic resonance 3=15917
 Permalloy films, flux reversal by Néel wall motion 3=15845
 Permalloy films, free oscillation of magnetization 1=6323
 Permalloy films, hard-direction hysteresis loops, constriction 2=12656
 Permalloy films, impulsive magnetization 3=15848
 Permalloy films, initial susceptibility spectra 0=10160
 Permalloy films, isotropic, mag. props. 3=23169
 Permalloy films, isotropic stress meas. 2=12679
 Permalloy films, longitudinal Kerr magneto-optical effect 3=13157
 Permalloy films, mag. anisotropy 1=20101
 Permalloy films, mag. anisotropy 3=11057
 Permalloy, films, mag. anisotropy dispersion 4=26326
 Permalloy, films, mag. anisotropy and hysteresis 3=15837
 Permalloy films, mag. anisotropy meas. 2=12775
 Permalloy films, mag. annealing 4=20549
 Permalloy films, mag. and crystallite structure rel. to contrast of electron microscope image 4=30715
 Permalloy films, mag. domain structure, dense-banded 4=7281
 Permalloy films, mag. domains, evaporated on cleaved NaCl 3=20931
 Permalloy films, mag. domains, fine structure 0=21045
 Permalloy films, mag. fluctuation props., theory 4=7284
 Permalloy films, mag. props., effect of substrate cleanliness 2=12651
 Permalloy films, mag. props., Kerr effect study 0=18195
 Permalloy films, mag. props. and substrate surface 1=20672
 Permalloy films, mag. ripple calc. 4=23000
 Permalloy films, magnetic anisotropy 1=7756
 Permalloy films, magnetic anisotropy dispersion and error function 3=20601
 Permalloy films, magnetic properties rel. to added Cu and Co 3=15816

Nickel compounds—contd

- Permalloy, films, magnetic props., effect of surface roughness 3=15840
 Permalloy films, magnetization 2=12652
 Permalloy films, magnetization, cross-tie walls, theory 0=18191
 Permalloy films, magnetization, free and forced oscillations 0=18194
 Permalloy films, magnetization, incoherent rotation, switching signals and domain pictures 4=28799
 Permalloy films, magnetization process, rel. to dispersed anisotropy 3=15811
 Permalloy films, magnetization reversal and partial rotation 1=14721
 Permalloy films, magnetization reversal process 4=23002
 Permalloy films, magnetoelastic sensitivity 3=15842
 Permalloy films, magnetoelastic effect in magnetization reversal 1=14722
 Permalloy films, magnetoelasticity and magnetic switching 1=6329
 Permalloy films, meas. of anisotropy dispersion 4=1817
 Permalloy films, microwave resonance 0=13860
 Permalloy, films, monocrystal, growth and mag. props. 1=6318
 Permalloy films, nanosecond switching 0=10157
 Permalloy films, Néel walls 0=8053
 Permalloy films, on Ni mag. props. 4=7283
 Permalloy films, partial switching 0=3051
 Permalloy, films, quasistatic magnetization 2=23666
 Permalloy films, regional variation of anisotropy in ferromagnetic resonance 3=25556
 Permalloy films, reverse magnetization 2=8637
 Permalloy films with rot. initial susceptibility, mag. props. 4=23006
 Permalloy films, rotatable anisotropy 1=6321-2
 Permalloy films, spin pinning at surface 3=15839
 Permalloy films, spin-wave resonance 1=6397
 Permalloy films, spin-wave resonance 3=15920
 Permalloy films, spin-wave resonance 3=15922
 Permalloy films, spin-wave resonance, dynamic pinning 2=23695
 Permalloy films, spin-wave spectra 4=7304
 Permalloy films, sputtered, coercive force variations 2=12660
 Permalloy films, standing spin-wave excitation by inhomogeneous a.c. field 2=21300
 Permalloy films, stratification 2=12674
 Permalloy films, structure, effect of growth conditions 3=16047
 Permalloy films, use in transmission delay line 3=14732
 Permalloy films transverse magnetization 3=18087
 Permalloy films, twinning 2=10783
 Permalloy films, uniaxial anisotropy 2=6669
 permalloy, films, uniaxial mag. anisotropy 1=3895
 Permalloy films, uniaxial, mag. ripple domain splitting and dispersion of easy axis 4=20550
 Permalloy films, uniaxial magnetic anisotropy, time depend. 0=6234
 Permalloy films, unidirectional hysteresis 2=12677
 permalloy, films, vacuum-deposited in mag. field, mag. anisotropy, field orientation depend. 4=26325
 Permalloy, with 5% Mo, mag. props., effects of proton bomb. 3=15863
 Permalloy, 5-79 Mo, magnetic props., proton irradiation effects, recovery 4=17643
 Permalloy, 4-79 Mo, initial permeability, cooling rate effects 2=12708
 Permalloy, gold additions, age hardened 2=12734
 Permalloy, heat treatment in mag. field 0=10330
 permalloy, inhomogeneous internal structure, theory 1=15119
 Permalloy, initial permeability, γ -ray effects 2=8617
 Permalloy layers, electrolytically prepared, mag. props. 2=14790
 Permalloy, longit. permeability of films 3=15831
 Permalloy, mag. domain wall thickness 2=13648
 permalloy, mag. easy axis, max. dispersion 3=15808
 Permalloy, mag. initial susceptibility and elec. cond., stress and heat treatment effects 4=7282
 78-Permalloy, mag. ordering and elec. props. 1=6533
 permalloy, mag. permeability, rel. to demag. method 1=6283
 Permalloy, mag. props. of very thin films 3=15832

Nickel compounds—contd

- Permalloy magnetic film flux reversal at low temps. 4=13218
 Permalloy, magnetic films, aging and stabilization 4=13212
 Permalloy magnetic films, hysteresis, anisotropy, n, He³ effects 4=13216
 Permalloy magnetic films, stress effects 4=13211
 Permalloy, magnetization, 4. 2-100°K, and spin wave theory 4=13210
 Permalloy (94%Ni), magnetization rel. to stress & temp. compared with pure Ni 3=1142
 Permalloy, magnetostriction, effect of prep. 2=14793
 Permalloy, magnetostriction, var. with plastic deformation 4=1837
 Permalloy—Mo, 81. 3-6, hysteresis, square loop 4=13214
 Permalloy—Mo magnetic film props. 4=13213
 Permalloy—Mo, 79-5, hysteresis squareness increase on electron irradi. 4=13217
 Permalloy—Mo, 79-4, hysteresis squareness, and crystal struct. 4=13215
 Permalloy, neutron irradi., elec. and mag. props. 2=23233
 Permalloy, neutron irradiation, hysteresis changes 0=3007
 Permalloy (95% Ni), mag. stripe domain obs. 4=23005
 Permalloy (78,83) films, mag. anisotropy, 1 Mc/s 3=15828
 Permalloy 78, sheets, coercive force, thickness depend. 1=5066
 Permalloy-sheet transfluxor-array memory 2=13635
 Permalloy 66, internal friction, due to ordering 3=11137
 Permalloy, spin-wave pinning, expt. rel. to theory 4=17638
 Permalloy, spin wave res. obs. in films 0=3115
 Permalloy, stacking faults 4=25952
 Permalloy strained wires as logic elements 2=13639
 Permalloy, structure and mag. props. 0=3052
 Permalloy, study evap. films 0=3277
 Permalloy, switching, effect of pulsed mag. fields rise time 4=23004
 Permalloy tape, rolled, anisotropy 2=12702
 Permalloy, thermomagnetic treatment, influencing factors 0=18187
 permalloy thin films, chain wall 1=15175
 Permalloy thin films, ferromag. resonance 2=14817
 permalloy, thin films, ferromagnetic resonance 1=7777
 Permalloy, thin films, homogeneity, by ferromagnetic resonance 3=18393
 Permalloy thin films, mag. props., temp. dependence 1=10162
 Permalloy, thin films, magnetic hysteresis 2=10662
 Permalloy thin films, nucleation processes 1=6330
 Permalloy thin films, spiral domain walls 1=6326
 Permalloy, various types of mag. film, props. 3=15836
 Permalloys, long-range ordering, diffractometer study 3=18337
 Permendur, in a. c. solenoid, dynamic mag. props. 0=21050
 Permendur, e. m. wave propagation, in sheets 0=17102
 Permendur 2V, mag. annealing method 2=12704
 Permendur 2V, magnetostrictive resonance under compression 2=2847
 Perminvar, domain-wall energy, meas. 0=4488
 Perminvar, ferromag. domains 0=13799
 Perminvar, mag. domain patterns, in thin films 1=10156
 Perminvar, mag. ordering and elec. props. 1=6533
 Perminvar, magnetization mechanism 0=13782
 phosphates, substituted, spectra, 6-30μ 3=15686
 solutions, aq., Ni²⁺ ion hydration 0=14123
 Supermalloy, Einstein-de Hass effect, gyromag. ratio 0=18198
 Supermalloy, mag. props. at 375-448°C 0=8074
 Supermendur cores, permeability, loss meas. 2=14795
 Supermendur, mag. props. at 500°C 0=10109
 Udimet 700 Ni base alloy, solute distrib. near grain boundaries 4=13464
 Udimet 700, solute distrib. near grain boundaries and mechanical props. 4=13464
 ullmannite, NiSbS, mag. susceptibility and elec. cond. 4=7220
 Mn₂Mn, antiferromagnetism and atomic ordering 2=16926, 18925
 Ni acetate, hydrated, mag. susceptibility at liq. He temp. 1=6258
 Ni alloy Ei -437B, thermal cycling effects 2=21447
 Ni alloy laminations, coercivity variation with thickness 1=6316

Nickel compounds—contd

- Ni alloys, with Ce, Pr and Cd, coercive force, deformation and annealing effects 3=23159
 Ni alloys with Cu, Zn, Al, Si and Sb, low-temp. specific heat 4=9852
 Ni alloys, dilute, mag. moment distrib., neutron scatt. study 3=15858
 Ni alloys, effect of alloying element on thermal conductivity 1=9987
 Ni alloys, impure, d-band structure 3=10622
 Ni alloys, magnetoresistance and Hall effect, rel. to ferromagnetism 3=15551
 Ni-ammine complexes, NH₃ exchange with NH₄OH 2=4525
 Ni ammonium salts, thermal recovery after n-irrad. 3=8472
 Ni arsenides, atomic moments and magnetic coupling 3=15738
 Ni austenite, damping capacity 4=23183
 Ni-base alloys, K state and binding forces 3=5114
 Ni-base alloys, neutron mag. scatt. theory 3=12964
 Ni-based, for acoustic transducers 1=10564
 Ni, binary, mag. moments and electron transfer 0=21037
 Ni binary, residual resistance, short-range order effects 1=15128
 Ni carbides, films, preparation and lattice structure 4=13600
 Ni chromite, mag. props. and crystal chemistry 3=1011
 Ni dimethylglyoxime, structure of K-absorption edge 2=18851
 Ni, dislocation density, after deformation 1=12386
 Ni ferrite, as acoustic pickup 1=2487
 Ni ferrite, elastic modulus and internal damping rel. to mag. fld. and frequency 4=23186
 Ni ferrite, elec. cond., effect of Mn content 4=6982
 Ni ferrite-Fe₃O₄, mag. cryst. anisotropy 2=18920
 Ni ferrite, ferromag. resonance 2=10686
 Ni ferrite, ferrimag. resonance, rel. to ionic rearrangement 4=1861
 Ni ferrite, ferromag. resonance linewidths 4=7305
 Ni ferrite, fine-grained, prep. and props. 1=6356
 Ni ferrite, growth orientation 1=6494
 Ni ferrite, growth and props. of single crystals 3=3270
 Ni ferrite, Hall effect 1=11265
 Ni ferrite, initial permeability, effect of wall dimensions 3=3123
 Ni ferrite, mag. anisotropy prod. by thermomechanical treatment 1=20140
 Ni-ferrite, mag. moment and anisotropy consts. rel. to temp. 4=15655
 Ni ferrite-magnetite, mag. cryst. anisotropy 2=12789
 Ni ferrite-magnetite system, mag. anisotropy 1=20141
 Ni ferrite, magnetostrictive displacement of O ions 4=13246
 Ni ferrite, memory core, switching properties 3=15874
 Ni ferrite, n. m. r. of Fe⁵⁷, pulsed method meas. 4=4426
 Ni ferrite, permeability peaks due to vacancy diffusion 1=20137
 Ni ferrite, reaction kinetics of Ni formation 1=7902
 Ni ferrite, resistivity, change on mag., anisotropy 3=17927
 Ni ferrite, single crystals prep., mag. props. 3=13274
 Ni ferrite, wall effect in ferrimag. resonance 1=1254
 Ni ferrites for acoustic transducers, props. 1=5323
 Ni ferrites, ferri- and paramagnetic resonances 1=20189
 Ni ferrites, polycryst., spin waves 3=3126
 Ni ferromag. alloys, spin-orbit effect on transport processes 4=22679
 Ni, halide complexes, tetrahedral, spectra 3=15354
 Ni, Hall effect 1=11265
 Ni hydride, f. c. c. lattice, H atom positions 3=25709
 Ni hydride, neutron scattering meas. 4=29124
 Ni-lanthanide cpds., magnetic and structural props. 4=28776
 Ni-lanthanone compounds, mag. moments in ferromag. phase 4=1795
 Ni-liquid Pb system, interfacial tensions, effect of temp. and press. 4=15724
 Ni, magnetoresistance 0=9943, 13583
 Ni nitrides, rel. to Ni deposit structure 1=19770
 Ni-nonferromagnetic, Curie temp. 0=13761
 Ni orthosilicates, mag. props. 77°-300°K 3=23142
 Ni oxide, interstitial defect meas. by emanation method 5=22568
 Ni phthalocyanine, structure of K-absorption edge 2=18851

Nickel compounds—contd

- Ni porous ferrites, effect of CoO at v.h.f. 1=6370
 Ni(II) pyridine complexes, i.r. spectrum of thiocyanate group 3=22581
 Ni-rich solid solutions with Sn, Ge and Si, prep. 2=23890
 6 Ni salts, proton resonance, low-temp. anomalies 0=535
 Ni-span C-type alloys, mechanical Q-factor rel. to heat treatment 2=12844
 Ni telluride, Hall effect measurement 1=12418
 Ni, twinning and fatigue due to plastic deform. 0=6302
 Ni zinc fluosilicate, alignment of nuclei of divalent ions 0=8963
 Ni²⁺ complexes, ionic radii, spin-orbit coupling and geometrical stability 1=3554
 Ni²⁺, e.s.r. in ZnF₂ 0=10233
 Ni-Ag alloy, undercooled, crystallographic sub-structure 4=13652
 Ni-Ag, fracture and creep comparison with Ni and Ni-Au at 500° and 600°C 4=23184
 Ni-Al alloys, β -phase, Al²⁷ n.m.r. Knight shift 4=7343
 Ni-Al alloys, elastic consts., rel. to temp., comp., heat treatment 2=23735
 Ni-Al alloys, time-to-rupture tests 4=28933
 Ni-Al bronze, β - α reaction, segregation 3=18352
 Ni-(Al, Co), mechanism of plastic deformation 3=23332
 Ni-Al, contrast phenomena at dislocation pairs 4=12765
 NiAl, electron distrib., X-ray meas. 3=16092
 NiAl, n.m.r. of Al²⁷, Knight shift and line intensity 3=23270
 NiAl, ordering rel. to composition 3=16104
 NiAl, "pest" degradation 4=29169
 Ni-Al, principal K absorpt. edge of Ni 2=21259
 Ni-Al solid soln., quenching defects 2=18574
 NiAl₃, hot-hardness 2=2337
 Ni₃Al, crystal structure, influence of Cr, Ti, Mo and W additions 4=23459
 Ni₃Al, paramag. susceptibility rel. to temp. 4=17626
 Ni₃Al, thermal expansion, effect of Cr, Ti, Mn, V, Zr and Ta additions, 300°, 600° and 900°C 4=25864
 Ni₂Al₃, hot-hardness 2=2337
 NiAlGa spinels, microwave power handling capacity improvements 4=13245
 NiAs, magnetic spin coupling in NiAs type compounds 4=4326
 NiAs-type crystals, exchange-inversion magnetization, theory 0=18206
 NiAs₂, electrical conductivity and magnetism 0=7934
 Ni₅As₂ vapour grown single crystals, space group, lattice constants 4=10543
 Ni-0.1% Au alloy, effect of cold work on creep and fracture 2=16962
 Ni-Au, fracture and creep comparison with Ni and Ni-Ag at 500° and 600°C 4=23184
 Ni-Au, internal friction, meas. rel. to temp. 3=1217
 NiB, crystal structure, rel. to similar types 3=18338
 NiB, paramag. props. 1=20063
 NiB, paramag. props. (150-800°K) and thermo-electricity 3=1124
 Ni-B system, crystal structure, two new Ni₄B₃ phases 0=18346
 Ni-B system, struct. 300-550°C 4=15742
 Ni₃(BO₃)₂, crystal structure, atomic, space group, unit cell 4=2083
 Ni-Be, aged, orientations of new phases 3=16099
 Ni-Be, ageing, crystal structure changes 3=13507
 Ni-Be alloy, "hot" ageing and recovery 4=2112
 Ni in Bi soln., 800°C, density, var. conc., and interstitial occupation 4=14137
 NiBr, emission spectrum, band heads, 4000 to 4500 Å 3=10512
 NiBr, visible molec. emission spectrum 0=5944
 NiBr₂, growth spirals on platelets 4=26615
 NiBr₂ magnetic susceptibility rel. to temp. 1=20169
 NiBr₂, nuclear fission product track enlargement by moisture 4=22650
 NiBr₂ platelets, deformation 2=10746
 NiBr₂. 6H₂O, antiferromagnetic space group, from p.m.r. 4=13262
 Ni-C, C diffusion rel. to temp. 4=20285
 Ni-C, crystallization, effect of Bi, Ca, Li impurities 3=18115
 Ni-C, effect of sulphur on surface props. and structure 1=5265
 Ni₃C, cryst. struct., by electron diffraction 3=1324

Nickel compounds—contd

- Ni-C-Fe crystals, martensite formation on surface 4=15805
 NiCl, five new band systems in photographic i.r. 2=6160
 NiCl, visible molec. emission spectrum 0=5944
 NiCl₂, adsorption on NH₄Cl, rel. to crystal habit change of NH₄Cl 4=29027
 NiCl₂, antiferromagnetic ordering 3=20625
 NiCl₂, antiferromagnetic properties 3=20626
 NiCl₂, crystal structure 4=4616
 NiCl₂ film on Ni, elec. props. 2=23913
 NiCl₂ in LiCl-KCl, e.s.r. 4=10315
 NiCl₂, mag. meas. 0=13759
 NiCl₂, mag. props., theory 0=13848
 NiCl₂ magnetic susceptibility (1.5°-20.4°K) 1=14765
 NiCl₂, nuclear fission product track enlargement by moisture 4=22650
 NiCl₂, paramag. susceptibility in 0.5 MOe fields 2=23632
 NiCl₂. 6H₂O, antiferromagnetic space group, from p.m.r. 4=13262
 NiCl₂. 6H₂O antiferromagnetic state, proton resonance 1=3951
 NiCl₂. 6H₂O, crystal structure 1=20564
 NiCl₂. 6H₂O, mag. susceptibility, at low temp. 0=11921, 21028
 NiCl₂. 6H₂O, specific heat, 1.4-20°K 0=4266
 NiCl₂. 6NH₃ crystals, e.s.r. meas., co-operative proton tunnelling 4=28880
 NiCl₂, spin waves, semicontinuum model 3=13288
 NiCO₃, antiferromagnetism, observation 3=1115
 NiCO₃, specific heat, 1.6° to 70°K, rel. to antiferromag. transition 3=17659
 Ni(CO)₄, bond length shortening, theory 3=10497
 Ni(CO)₄, i.r. spectrum 2=16530
 Ni(CO)₄, isotope exchange with CO 3=3380
 Ni(CO)₄, liquid and solutions, Raman spectra 0=19156
 Ni(CO)₄, π electron interaction potl. 0=17766
 Ni(CO)₄, Raman spectrum 2=1999
 Ni(CO)₄, vapour, Raman spectrum 0=19218
 NiCd ferrite, ferromagnetic resonance 1=14775
 Ni-Cd system, liquidus curve, crystal struct., atomic 4=16291
 Ni_{1-x}Cd_xFe₂O₄, ferromagnetic resonance at 9.7-24 kMc/s 1=3923
 Ni-Co alloys, dislocations, rel. to stacking-fault energy 3=17744
 Ni-Co alloys, ferromagnetic relaxation and related phenomena 3=8681
 Ni-Co alloys, stacking faults 1=19797
 Ni-Co alloys, stacking faults, prod. by plastic deform. 3=20206
 Ni-Co, anneal-induced mag. anisotropy 1=17951-2
 Ni-Co, cold rolled, mag. anisotropy 2=23651
 Ni-Co, crystal imperfections, stacking, electron microscope obs. 4=6861
 Ni-Co crystals, work hardening 4=4479
 Ni-Co, electronic spec. heat and energy bands 0=4267
 Ni-Co f.c.c. solid soln., induced magnetic anisotropy 3=1041
 NiCo ferrite, as acoustic pickup 1=2487
 Ni and Co ferrite-chromite series, anomalous mag. moment 3=25544
 Ni-Co ferrites, Fe-deficient, induced anisotropy at low temp. 4=20558
 Ni-Co, ferromag. anisotropy, ordering theory 3=18073
 Ni-Co, ferromag. domain patterns 3=18079
 Ni-Co, ferromagnetic saturation in deformed f.c.c. crystals 1=20079
 Ni-Co, internal fields, by n.m.r. 2=12649
 Ni-Co, plastic deformation, mechanism 2=2327
 Ni-Co, rolling texture 2=15054
 Ni-Co single crystals, plastic props. 2=16958
 Ni₃Co, Debye characteristic temp., ordering effects 4=1982
 Ni₃Co, ordering at 773°C 0=16355
 Ni-Co-Cr, magnetostriction, temp. depend. 4=4366
 Ni_{1-x}Co_xFe₂O₄, microwave props., high power 4=13244
 Ni_{1-x}Co_xFe₂O₄, vol. dependence of ferrimag. resonance 0=10207
 Ni_{1-x}Co_xFe₂O₄-BeO.Fe₂O₃, constricted hysteresis loop 3=1085
 Ni_{1-x}Co_xFe₂O₄-Fe₂O₃, constricted hysteresis loop 3=1085
 Ni_{1-x}Co_xFe₂O₄, mag. anisotropy 3=1033
 Ni-Co-Mn ferrite, (E1), magnetomechanical coupling, rel. to polarizing field 4=7289

Nickel compounds — contd

- Ni-Co-Mn ferrite, magnetomechanical properties in magnetostrictive type E1 ferrite 4=4369
 Ni²⁺Co₂O₄, spinel, superexchange 4=13274
 Ni-Co-P films, ferromag. shape anisotropy 3=20602
 Ni-Cr alloy, irregular deformation, regular features 4=7379
 Ni-Cr alloy, short-range order, room temp.-600°C 4=1998
 Ni-Cr alloys, antiferromagnetism 4=23032
 Ni-Cr alloys, elastic consts. rel. to temp., comp., heat treatment 2=23735
 Ni-Cr alloys, formation of K-state 2=10909, 15058
 Ni-Cr alloys, ion diffusion in elec. fields 2=10407
 Ni-Cr alloys, Ni and Cr diffusion rel. to Cr content 4=20302
 Ni-Cr alloys, tensile strength increase, by low-temp. annealing 3=25637
 Ni-Cr, anomalous ageing, internal friction peaks 0=1933
 Ni-Cr, Barkhausen pulses duration in wire 4=13198
 Ni-Cr base alloy, fine structure and mech. props., heat effects 3=18351
 Ni-Cr base alloys, grain-boundary precipitation 4=2111
 Ni-Cr basis polycrystalline alloy, Fe diffusion, 1050°-1250°C 3=20231
 Ni-Cr, creep fracture 3=3239
 Ni-Cr, effects of high-temp. absorption of C 3=3347
 Ni-Cr, enthalpy and specific heat at high temps. 2=4445
 Ni-Cr, films, prep. of resistors 0=8287
 Ni-Cr films, vacuum deposited on glass, thickness and composition 4=20809
 Ni-Cr films, vacuum deposited, structure changes rel. to annealing temp. 4=26562
 Ni-Cr, irradi., structural transformation 4=1996
 Ni-Cr, K_α lines, X-ray intensity curves 2=5379
 Ni-Cr (18.3%), K-state, deformation resistance, rate and temp. dep. 2=23751
 Ni-Cr, mag. moments, neutron diffr. study 3=20608
 Ni-Cr, magnetization up to 15 kOe, 0°-300°K 3=5010
 Ni-Cr, magnetostriction and crystal anisotropy 1=12535
 Ni-Cr ordering, by neutron diffr. 4=2000
 Ni-Cr, precipitation on dislocations 1=20606
 Ni-Cr system, partial and total mass transfer 4=12788
 Ni-Cr with Ti, specific resistance 2=18634
 Ni-Cr thin film resistances 1=6441
 Ni-Cr (13%), plastic deform. and annealing, intercrystal. slip 4=13432
 Ni-Cr (21.4 wt%), phase transform., K, neutron effects 4=23282
 Ni-21% Cr, X-ray thermal scattering, anomalies 0=16317
 Ni₃Cr, anomalous elec. resist. 1=7612
 Ni₃Cr, neutron irradi., elec. and mag. props. 2=23233
 Ni-Cr-Al alloys, elastic consts. rel. to temp., comp., heat treatment 2=23735
 Ni-Cr-Al, structure 2=21531
 Ni-Cr-Fe alloys, thermophysical props. 4=15424
 Ni-Cr-Fe, Cr diffusion, 1294°C 3=20231
 Ni-Cr-Fe, effects of high-temp. absorpt. of C 3=3347
 Ni-Cr-Mo steel with epoxy-resin layers, photoelasticity 4=8125
 NiCr₂O₄, crystal structure 1=6519
 Ni-Cr-Ti alloys, elastic consts. rel. to temp., comp., heat treatment 2=23735
 Ni-Cr-Ti, precipitation obs. 4=7504
 Ni-Cr-Ti-Al, ageing, fine crystalline structure change 2=8854
 Ni-Cr-Ti-Al, structure 2=21531
 Ni-Cr-Ti-W-Al, structure 2=21531
 Ni-Cr-Ti-W-Mo-Al, structure 2=21531
 Ni-Cr-Ti-W-Mo-Nb-Al, structure 2=21531
 Ni-Cu alloy, elastic constants, meas., 1-5 Mc/s 4=29676
 Ni-Cu alloys 1=7740
 Ni-Cu alloys, creep and fracture 2=10760
 Ni-Cu alloys, creep kinetics high-temp., of single crystals 4=7440
 Ni-Cu alloys, shear and diffusion plastic deformation 2=23760
 Ni-Cu alloys, stacking faults, prod. by plastic deform. 3=20206
 Ni-Cu alloys, thermoelectric power variation in magnetic fields 3=20427
 Ni-Cu, anomalous Righi-Leduc effect 1=9020
 Ni-Cu (30%), domain wall velo., effect of plastic deformation and irradiation 3=11068
 Ni-Cu, effect of magnetic clusters on specific heat 1=7536

Nickel compounds—contd

- Ni-Cu, effect of press. on atomic mag. moment and elec. resistance 0=11831
 Ni-Cu, elec. resistance and magnetization 0=6074
 Ni-Cu, ferromag. resonance, exchange integral 2=4241
 Ni-Cu, forced magnetoresistance 3=13042
 Ni-Cu, interatomic bond strength, elasticity data 0=728
 Ni-Cu, mag. susceptibility, electronic sp. ht. 3=23143
 Ni-Cu, magnetization up to 15 kOe, 0°-300°K 3=5010
 Ni-Cu, molten, viscosity 0=14580
 Ni-Cu multiple layers, magnetic coercive force 2=736
 Ni-Cu, Righi-Leduc effect, rel. to two-band theory 2=6416
 Ni-Cu thin films, spin-wave res. 3=1169
 Ni_{1-x-y}Cu_xCo_yFe₂O₄, line width and anisotropy constant 1=20075
 Ni-Cu-Fe alloys, Hall effects and magnetoresist. 4=10031
 Ni-Cu-Fe, Hall effect and number of cond. electrons 1=14363
 Ni_{0.2}Cu_{0.8}Fe_{1.9}Mn_{0.2}O₄ d.c. resistivity and Seebeck voltage 4=26055
 Ni₂Er, mag. structure, neutron diffr. meas. 4=28822
 NiF₂, antiferromagnetic reson., far i.r., var. field temp. 4=13302
 NiF₂, antiferromagnetic resonance in far i.r. 3=15930
 NiF₂, antiferromagnetism 0=13852
 NiF₂ crystals, i.r. spectra of lattice vibrs. 4=26208
 NiF₂ crystals, spectrum 2=16583
 NiF₂, ferromag. resonance lineshape calc. 4=13283
 NiF₂, geometry and bonding, from deflection in elec. field 4=22378
 NiF₂ in LiF-NaF-KF liquid eutectic, spectrum and struct. 4=14170
 NiF₂, mag. ordering, n.m.r. study, 4.2-258°K 1=1282
 NiF₂, mag. props., theory 0=4502
 NiF₂, n.m.r. in domain walls 1=6435
 NiF₂, optical absorpt. spectrum for paramag. and antiferromag. states 4=17578
 NiF₂ parasitic ferromagnetism 1=20037
 NiF₂, magnetic domains, optical absorption 4=7269
 NiF₂, spin waves and n.m.r. in domain walls 3=18114
 NiF_{2-t}Cr_tO₄ (t>1), atomic magnetic moments, screw arrangements 1=20037
 Ni cyanide-NH₃ complexes, X-ray powder patterns 3=1406
 NiF₂O₄, ferrimagnetic resonance, narrow line 4=7311
 Ni-Fe alloy, cubically aligned, rolling textures 4=26698
 Ni-Fe alloy, domain obs. 2=14780
 Ni-Fe alloy, elastic consts., 1-5 Mc/s 4=20676
 Ni-Fe alloy films, mag. props. 2=8639
 Ni-50% Fe alloy, irradiation effects, magnetic study 2=21084
 Ni-Fe alloy, partial dislocations in b.c.c. lattice and transition f.c.c.→b.c.c. 4=9954
 Ni-Fe alloy, plastically deformed, heat treatment effects 4=26524
 Ni-Fe alloy, thin films, torque, angular dependence 3=1071
 Ni-Fe alloy, transformation by N atom insertion 3=1323
 Ni-Fe alloys, ferromag. spin-wave energies, neutron diffr. meas. 4=13199
 Ni-Fe alloys ferromagnetic resonance 3=23203
 Ni-Fe alloys, plastic deformation and work hardening 4=20669
 Ni-Fe alloys, plastically deformed and annealed, positron annihilation with electrons 4=28434
 Ni-Fe alloys, resistivity, rel. to deformation and tempering 4=7437
 Ni-Fe, anneal-induced mag. anisotropy 1=17951-2
 Ni-Fe, austenite decomp. in 50-50 tape 0=3274
 Ni-Fe in chondrites 3=9186
 Ni-Fe, coercive force during evaporation 2=2286
 Ni-Fe crystal, reversible magnetic susceptibility 1=12532
 48% Ni-Fe cubic face-centred, mag. props., -130°C, and diffusion, H 3=15853
 Ni-Fe, d.c. and a.c. props. 0=8037
 Ni-Fe dilute alloys, Hall effect at low temp. 2=6420
 Ni-Fe, domain structures and strain 2=8634
 Ni-Fe f.c.c. solid soln., induced anisotropy 3=1041
 NiFe ferrite, mag. anisotropy, influence of empty cation sites, 200-300°C 3=6726
 Ni-Fe ferrite, mag. anisotropy rel. to vacant cation sites 2=10673
 NiFe ferrite, magnetocrystalline anisotropy, 4.2-300°K 4=13247
 Ni-Fe ferrite, natural ferromag. res. 3=3156

Nickel compounds—contd

- Ni-Fe ferrite, relaxation loss 3=8691
 Ni-Fe ferrite, structure and mag. anisotropy 2=749
 Ni-Fe ferrites, mag. fld. induced anisotropy rel. to Ni conc. 4=13250
 Ni-Fe ferrites, with small Co-substitution, induced anisotropy 3=1035
 Ni-Fe, ferromag. alloy, elastic consts. meas. 4=7442
 Ni-Fe ferromag. anisotropy, ordering theory 3=18073
 Ni-Fe, ferromag. Barkhausen noise freq. spectrum 4=22999
 Ni-Fe ferromag. exchange const. 2=14794
 Ni-Fe, ferromag. resonance in colloidal state 1=1252
 Ni-Fe, 50%, permeability 20°-400°C 2=10649
 Ni-Fe, 50-50%, effect of tension on mag. domains 1=6297
 Ni-Fe films, anisotropic, susceptibility meas. 4=7279
 Ni-Fe films, anomalous, mag. props. 2=23663
 Ni-Fe films, deposition and mag. domain walls 1=14715
 Ni-Fe films, domain behaviour rel. to anisotropy 3=15818
 Ni-Fe films, domain rotation and wall development 1=6328
 Ni-Fe films, domain structure 2=21317
 Ni-Fe films, domain wall creeping 2=14781
 Ni-Fe films, domain wall generation and migration 2=16910
 Ni-Fe films, domain walls 3=15629
 Ni-Fe films, dynamic behaviour rel. to frequ. 4=10266
 Ni-Fe films, electrodeposited, mag. props. 3=25537
 Ni-Fe films, evap., induced mag. anisotropy 2=12653
 Ni-Fe films, ferromagnetic resonance 4=20546
 Ni-Fe films, field induced and incidence angle anisotropy 1=10158
 Ni-Fe films, Hall effect and spontaneous mag. 3=22907
 Ni-Fe, films, induced magnetic anisotropy 1=11438
 Ni-Fe, films, internal stresses rel. to domain structure 3=20595
 Ni-Fe, films, mag. anisotropy 0=11838
 Ni-Fe films, mag. anisotropy, positive and negative 3=1067
 Ni-Fe films, mag. props. rel. to anisotropy dispersion 3=18083
 Ni-Fe films, mag. process 2=16913
 Ni-Fe films, mag. regions 2=8640
 Ni-Fe films, magnetic hysteresis 4=26323
 Ni-Fe films, magnetic and optical anisotropies 1=6317
 Ni(80%)-Fe(20%) films, magnetization reversal 3=1082
 Ni-Fe, films, magnetization reversal, static 3=13236
 Ni-Fe films, magnetoelasticity rel. to composition 2=12681
 Ni-Fe films, magnetoresistance, Hall effect, room and liquid N temps. 4=12862
 Ni-Fe films, magnetoresistance meas. 3=14470
 Ni-Fe films as memory systems, props. 2=13630
 Ni-Fe, films, microtwinning 0=21170
 Ni-Fe films, negative magnetic anisotropy 3=15807
 Ni(80%)-Fe(20%), films, noncoherent switching 2=10661
 Ni-Fe films, preparation and structure 1=12664
 Ni-Fe films, rotatable mag. anisotropy, rel. to magnetostriction 3=15843
 Ni-Fe films, shape-sensitive mag. domains 2=16914
 Ni-Fe films, spiral and concentric domain walls 3=15846
 Ni-Fe films, stress, mag. anisotropy 2=10660
 Ni-Fe films, stripe magnetic domains 4=28824
 Ni-Fe, films and strips, magnetoresistance meas. 4=28534
 Ni-Fe films, switching behaviour 4=4367
 Ni-Fe (80/20%) films, u.s. switching of magnetization vector 3=15826
 Ni(40-100%)-Fe films, uniaxial anisotropy, torque meas. 3=15814
 Ni-Fe films of very low coercivity 2=21326
 Ni-Fe films, use in weak mag. field meas. 3=14722
 Ni-Fe films, wall movement, field strength 3=18090
 Ni-Fe, forced magnetoresistance 3=13042
 NiFe garnet, fine grain, ferrimagnetic reson., dielectric loss, microwave meas. 4=13299
 NiFe garnet, initial permeability, var. only with wall dimensions, and not density or porosity 4=4386
 NiFe garnet, magnetostrictive displacement of O ions 4=13246
 Ni-Fe, grain oriented, mag. anisotropy meas. 4=10282
 Ni-Fe, high resistivity with rect. hysteresis loops 0=6227
 Ni-Fe, K-absorption edge, proton irradiation effect 2=14698

Nickel compounds—contd

- Ni-Fe layers, domain wall interactions 2=12768
 Ni-Fe layers, evaporated, composition 3=18377
 Ni(40-100%)-Fe, mag. anisotropy 3=1069
 Ni-Fe mag. films, effects of thickness, composition and electrodeposition conditions 4=7271
 NiFe, mag. memory devices, SiO undercoating 2=14784
 Ni-Fe, mag. props., effects of Cu, Si, Cr and Mo 4=13197
 Ni-Fe, mag. props. rel. to prep. method 3=1073
 Ni-Fe, mag. small-signal behaviour, domain wall model 3=25528
 Ni-Fe (5%), mag. stripe domain obs. 4=23005
 Ni-Fe, magnetic anisotropy, heat treatment effects, ordering 4=13205
 Ni-Fe (50/50), magnetic anisotropy, and ordering, due to neutron irradiation 4=13207
 Ni-Fe magnetic cores, flux reversal model 1=7751
 Ni-Fe magnetic films, anisotropy inhomogeneity 4=13200
 Ni-Fe, magnetic films, anisotropy, negative, var. with composition and deposition temp. 4=13202
 Ni-Fe magnetic films, anisotropy with double evap. source 4=7270
 Ni-Fe magnetic films, domain wall creep, temp. var. 4=13201
 Ni-Fe magnetic films, ferromag. reson. line width and anisotropy dispersion 4=13288
 NiFe magnetic films, field var. effects 4=22973
 Ni-Fe magnetic films, narrow, domains 4=13203
 Ni-Fe mag. films, new domain type 4=22998
 Ni-Fe, magnetic sheets, eddy-current losses meas. 4=13164
 Ni-Fe magnetic tape, domain wall area-mobility product 1=6302
 Ni-Fe, magnetoelastic, anisotropy, single crystals, temp. depend. 3=18075
 Ni-Fe, magneto-optical Kerr effect in films 1=11357-8
 Ni₃Fe, magneto-optical res. rel. to d-electron Stark transits 3=6645
 Ni-Fe, magnetostriction, anisotropy of ΔE effect 2=4230
 Ni-Fe, motion of magnetic Bloch walls 1=14712
 Ni-Fe, neutron irradiation, elec. and mag. props. 2=23233
 Ni-Fe nitrides, mag. and crystallographic props. 0=11830
 Ni-Fe, ordering, magnetic anisotropy 0=1781
 Ni-Fe, ordering, strain ageing 3=8775
 Ni-Fe, origin and growth of annealing twins 3=25756
 Ni-Fe, residual Hall resistivity 4=20324
 Ni-Fe, sintered, U.T.S., temp. depend. 0=1866
 Ni-Fe (64%), crystal stacking fault prob., plastic deformation temp. var. 4=20286
 Ni-Fe(66:34), internal friction, effect of heat treatment with mag. fields 4=23187
 Ni-Fe spinels, structure, props., under high oxygen pressures 2=12698
 Ni-Fe, switching by non-coherent rotation 3=1081
 Ni-Fe, tape-wound cores, hysteresis loop meas. 0=10130
 Ni₃Fe, tensile characteristics, rel. to order 3=23352
 Ni-Fe thin films, domain struct. and magnetization reversible rotation by Faraday effect 3=1079
 Ni-Fe, thin films, magnetic anisotropy 1=11439
 Ni-Fe thin films, magnetic anisotropy 3=1068
 Ni-Fe thin films, magnetization, electron microscope study 1=10163-4
 Ni-Fe thin films, thickness, composition meas. 2=7162
 Ni (80%)-Fe (20%) thin films, oxide layer surf. spin pinning 3=1168
 Ni-Fe, thin films structure and anisotropy rel. to minor constituents 3=1074
 Ni-Fe, volume magnetostriction 3=6713
 Ni-Fe wires at 400 cycles, grain size effects 2=12706
 Ni-Fe wires, motion of Bloch walls 1=14708
 NiFe₂ films, optical Faraday effect 4=22879
 Ni₃Fe, antiferromag. props. in relation to ordered state 0=21062
 Ni₃Fe, coercive force, effect of plastic deformation 2=23657
 Ni₃Fe, creep, anomaly, explanation 3=23336
 Ni₃Fe, Debye characteristic temp., ordering effects 4=1982
 Ni₃Fe dislocation pairs electron microscope photographs 4=25944
 Ni₃Fe, effect of impurity atoms on mag. props. and neutron irradiation resist. 4=7276
 Ni₃Fe, ferromag. anisotropy, rel. to directional order 2=8850
 Ni₃Fe, ferromag. anisotropy, rel. to ordering 3=18072

Nickel compounds—contd

- Ni₃Fe, ferromagnetic anisotropy, ordering, on annealing 3=23155
 Ni₃Fe, long-range order, entropy 0=16346
 Ni₃Fe, mag. ordering in mag. annealing process 2=16909
 Ni₃Fe, magneto-optical res. rel. to d-electron Stark transitions 2=16807
 Ni₃Fe, neutron irradi., elec. and mag. props. 2=23233
 Ni₃Fe, paramag. susceptibility rel. to temp. 4=17626
 Ni₃Fe, short-range order, rel. to heat treatment and plastic deformation 4=23285
 Ni₃Fe, work function rel. to temp. 2=17860
 Ni₃Fe, work hardening rel. to plastic deformation and dislocations 4=4448
 Ni80Fe17Co3 alloy, films, varn. of dispersion angle with thickness 3=8675
 Ni-Fe-Co alloys, mag. wall-wall interaction between films 3=15833
 Ni-Fe-Co film memory devices, effect of skew 3=14734
 Ni-Fe-Co films, mag. reversal behaviour 3=23171
 Ni80Fe17Co3, films, varn. of dispersion angle with thickness 3=8675
 Ni-Fe-Cr ferrite, Faraday effect rel. to permittivity 3=1050
 NiFe₂₋₄Cr₂O₄, high-field magnetization study 1=20146
 Ni-Fe-Cr magnetic film props. 4=13204
 Ni_{0.75}Fe_{0.25}Fe₃O₄, energy anisotropy, temp. and mag. field depend 4=26338
 (Ni, Fe)₂Mn, exchange anisotropy 1=7742
 NiFe-Mn-NiFeCo, NiFe-Mn films, mag. coupling types 4=20547
 Ni-Fe-Mo alloys, domain struct. by Kerr magneto-optical effects 2=21321
 Ni-Fe-Mo alloys, domain walls, magnetization vectors 2=21319
 Ni-Fe-Mo, domain structure, coercivity 2=16912
 Ni-Fe-Mo films, mag. anisotropy 2=12781
 Ni-Fe-Mo films, mag. process 2=16913
 Ni₃Fe-(3%)Mo, rel. to K-state formation, rel. to excess vacancies 3=13531
 Ni(79%)-Fe(17%)-Mo(4%), ferromagnetic permeability, stress angle effects 4=13185
 (80%)Ni-(17%)Fe-(3%)Mo films, mag. props. rel. to u.s. vibrations 4=22978
 50 or 79% Ni-Fe, 4-5% Mo, tapes, 3-30μ in thick, mag. reversal, h.f. and impulse 3=15794
 Ni-Fe and Ni-Fe-Co layers separated by cond. layers, mag. coupling 4=17657
 NiFe₂O₄, Fe⁵⁷ Mössbauer effect, internal fields 1=9037
 (Ni_{0.98}Fe_{0.02})Fe₂O₄, ferrimag. line width 3=1160
 NiFe₂O₄-Fe₃O₄, ferromagnetic crystalline anisotropy 1=14696
 NiFeO₄-Fe₂O₃ lattice dimensions and α-Fe₂O₃ precipitation 1=12641
 NiFe₂O₄ ferrite films, structure 4=23586
 NiFe₂O₄ films, optical Faraday effect 4=22879
 (NiFe₂O₄)_{1-y}(Fe₃O₄)_y, electrical conductivity 1=12425
 NiFe₂O₄-ZnFe₂O₄ system, mag. structure meas. 4=7291
 Ni₂Fe₂O₄ films, Faraday rotation and mag. hysteresis 3=15655
 NiFe₂O₄, flux growth by Czochralski method 3=16043
 Ni_{1-x}Fe_{2-x}O₄, elec. cond. rel. to temp. 2=10445
 NiFe₂O₄, ferrite, elec. conductivity meas. 2=14506
 Ni_xFe_{3-x}O₄, ferromag. cryst. anisotropy 2=2277
 Ni_xFe_{3-x}O₄, ferromag. resonance, anisotropy and g-value 2=18933
 NiFe₂O₄ specific heat, 1.8-20°K 2=571
 NiFe₂O₄, Ni²⁺ contrib. to lattice distortion 3=1012
 Ni_{1-x}Fe_{3-x}O₄, magnetic after-effect 3=1036
 NiFe_{2-x}V_xO₄ spinel, sat. magnetization and susceptibility rel. to temp. 3=1008
 NiGa, grain boundary hardening, O₂-induced 4=17740
 Ni-Ga phases, mag. props., temp. var. 4=4327
 NiGa₂O₄ spinel structure 1=15093
 Ni₂GeO₄, i.r. spectrum 2=12603
 NiH chemical desorption enthalpy of H 4=23649
 NiH, conductivity, elec., 78-273°K 4=17466
 NiHf, crystal structure 2=10879
 NiH₂, crystal structure 2=10879
 Ni₁₀Hf, crystal structure of intermediate phases 2=21528
 Ni(H₂O)₆SO₃, crystal structure 3=1339
 Ni²⁺.6H₂O complex, orthorhombic crystalline field theory 3=20053

Nickel compounds—contd

- Ni²⁺.6H₂O, optical absorption spectra, e.s.r., mag. anisotropy in cryst. salts 4=25830
 [Ni(H₂O)₆]²⁺ complex, cryst. field, symmetry 4=6683
 Ni(H₂O)₆SiF₆, n.m.r., 0.15°-4.2°K 4=23072
 Ni(IO₃)₂.2H₂O, sp. ht. at low temps., meas. 4=28371
 Ni(IO₃)₂.2H₂O, susceptibility meas. and mag. props. 4=28823
 Ni-In phases, mag. props., temp. var. 4=4327
 Ni-In type, covalent bond and spin schemes 2=6833
 NiI₂.6NH₃, paramag. resonance anomalies at low temp. 1=10178
 Ni(IO₃)₂.2H₂O, antiferromagnetism, nucl. quadrupole resonance study 1=7807
 NiK Tutton salt, mag. susceptibility, 1.4-20.4°K 0=21028
 Ni_(1-x)Li_xO, resistance, room temp. to 700°C 4=12907
 NiMg ferrite, susceptibility, anomalous, near Suhl threshold 4=28844
 NiMg Fe₂O₄ ferrite, prep. from oxalates 2=14798
 Ni-Mn alloys, Mn⁵⁵ n.m.r. and moment 4=7353
 Ni-Mn alloys, paramag. susceptibility rel. to temp. 4=17626
 Ni-(6.0-27 wt %) Mn alloys, density meas. 4=1968
 Ni-Mn alloys, saturation magnetization, rel. to volumetric compression 3=8668
 Ni-Mn, antiferromag. structure 0=11922
 Ni-Mn, disordered, exchange anisotropy 0=11841
 Ni-Mn, effect of elastic deform. on magnetostriction 1=3906
 NiMn ferrite, thermoelec., 100-500°C 4=30670
 Ni-Mn magnetostriction 3=23177
 Ni-Mn, magnetostriction rel. to comp. and ordering 2=14792
 Ni-Mn, ordering, effect of plastic deform. 3=5133
 Ni-Mn(25, 30 at.%), specific heat, 13-1300°K 4=22493
 Ni-Mn, X-ray emission spectra 2=705, 8540
 Ni₃Mn alloy, saturation magnetization, effect of ordering 4=28825
 Ni₃Mn, anisotropy of magnetization at low temp. 0=13774
 Ni₃Mn atomic ordering temp. and mag. moment 3=20623
 Ni₃Mn, coercive force, effect of plastic deformation 2=23657
 Ni₃Mn, Debye characteristic temp., ordering effects 4=1982
 Ni₃Mn, dislocations, rel. to ordering 1=17538
 Ni₃Mn, disorder to order transformation 1=6535
 Ni₃Mn, disordered, exchange anisotropy 0=2996
 Ni₃Mn, disordered, mag. props. below 110°K 0=3017
 Ni₃Mn, disordered, specific heat, temp. dependence 0=17890
 Ni₃Mn, electron pair annihilation radiation ang. distrib. 3=17694
 Ni₃Mn, Hall consts., effect of order 2=6422
 Ni₃Mn, Hall effect, temperature dependence 0=18393
 Ni₃Mn mag. moment and atomic ordering temp. 3=20623
 Ni₃Mn mag. structure rel. to order 3=18080
 Ni-Mn, magnetization up to 15 kOe, 0°-300°K 3=5010
 Ni₃Mn, magnetization, temp. depend., antiferromag. exchange interaction 3=20583
 Ni₃Mn, magneto-optical res. rel. to d-electron Stark transits 3=6645
 Ni₃Mn, magneto-optical res. rel. to d-electron Stark transitions 2=16807
 Ni₃Mn, neutron irradi., elec. and mag. props. 2=23233
 Ni₃Mn, ordering kinetics 4=1997
 Ni₃Mn, ordering kinetics, elec. and mag. props. 3=3329
 Ni₃Mn, residual elec. resistance 1=12653
 Ni₃Mn, slip 0=21112
 Ni₃Mn, transformation, order-disorder, from Mössbauer effect 3=13528
 Ni₃Mn, volume changes during ordering 1=10271
 Ni_{0.253}Mn_{0.022}Co_{0.027}Fe₂O₄, mechanical resonance frequency rel. to mag. polarization and temp. 4=7290
 Ni₂MnGa, structure, mag. props. 0=12048
 Ni₂MnIn, structure, mag. props. 0=12048
 NiMnO₃ ferrimag. and antiferromag. props., 1.3-300°K 0=13839
 Ni_{1-x}Mn_{2+x}O₄, prep., semicond. and ferrimag. props 3=13078
 Ni-Mo alloy, grain growth kinetics 3=20904
 Ni-Mo alloys, effect of atomic defects on K-state formation 4=23283
 Ni-Mo alloys, elastic consts., rel. to temp., comp., heat treatment 2=23735
 Ni-10 at % Mo, close-range order (K-state) formation 4=23284

Nickel compounds—contd

- Ni—Mo solid solutions, X-ray spectra fine struct. rel. to binding forces 3=5141
 Ni—Mo, superconductivity below 1°K 2=1338
 Ni—Mo—Fe permalloys, magnetic properties rel. to annealing 1=11447
 NiMoO₄, crystal structure 3=5110
 Ni₃N, tetragonal form 1=7869
 Ni(NH₃)₆-halides, thermal props. below 1°K 4=22494
 Ni(NH₃)₆Br₂, specific heat below 4°K 2=3841
 Ni(NH₃)₆Cl₂, anomalous, paramagnetic res. 2=774
 Ni(NH₃)₆Cl₂, magnetic susceptibility (1.5°-20.4°K) 1=14765
 Ni(NH₃)₆Cl₂, magnetic susceptibility (1.5°-20.4°K) 1=14765
 Ni(NH₃)₆Cl₂, magnetic susceptibility (1.5°-20.4°K) 1=14765
 Ni(NH₃)₆Cl₂, proton resonance 1=9073
 Ni(NH₃)₆Cl₂, specific heat below 4°K 2=3841

 NiO powder, elec. cond., freq. depend. 4=30625
 NiO, proton diffusion, electrochem. meas. 2=14462
 NiO, re-orientation rel. to abrasion 2=19033
 NiO, reproducible ferromagnetism 0=4476
 NiO, semiconducting properties 1=17755
 NiO, semiconductor carrier mobilities, var. with Li impurity 3=20337
 NiO single crystals, twin walls meas. 4=20783
 NiO, sorption of H₂, 20-400°C 3=13603
 NiO, sorption of O₂, 20-400°C 3=13603
 NiO, spin-dependent i. r. absorption band model 4=10182
 NiO, superexchange interaction, spin-dependent energy 0=11920
 NiO, thermal cond., rel. to phonon-spin interactions 2=23082
 NiO, thermal etch pits 2=21471
 NiO, thermoelectricity, var. with Li impurity 3=20337
 NiO-type semiconductors, carrier mobility, low, polaron theory 3=8526
 NiO ultra fine particles, antiferromag., susceptibility meas. 3=1095
 NiO, vaporization 1=11864
 NiO, visible radiation emitted by electron bombard., spectral distrib., intensity distrib., polarization 4=13080
 NiO, work function, effect of oxide additions 0=11710
 NiO₂ crystal lattice structure 1=10259
 NiO—CoO system, magnetothermal props. 1=20045
 NiO—CoO—O₂ semiconducting mixtures, elec. props. 0=15950
 NiO₂Cu preparation and crystal structure 3=8856
 NiO—CuO—Li₂O system, semicond. props. 2=6465
 NiO, Fe₂O₃, gyromagnetic ratio 1=11461
 NiO—α-Fe₂O₃ mixtures, spinel formation investig. by differential thermal analysis 4=1971
 NiO(Fe₂O₃)_{0.98}, semiconducting props. 1=1082
 NiO.(1-x)Fe₂O₃.xAl₂O₃, ferrimag. compensation pts. 3=13268
 NiO₂Na preparation and crystal structure 3=8856
 Ni_{1-x}O, powdered, electrical resistivity rel. to temp. and Ni content 3=13077
 Ni₂O₃ crystal lattice structure 1=10259
 Ni₂O₃ crystal formation on Ni surfaces 3=18264
 Ni₂O₃·H₂O, paramagnetism 4=4333
 Ni₂O₃·H₂O, semiconducting, thermoelectricity 4=4333
 NiO—Mn₂O₃, crystal structure 0=14019
 NiO—Al₂O₃ system, structure 4=23242
 NiO, Ni²⁺ aspherical 3d electron distrib. 1=6103
 NiO—O system, antiferromag. behaviour 2=10681
 Ni—P films, prep., elec. cond. props. 2=14497
 NiP₃, crystal structure 0=18347
 Ni₂P, crystal structure 0=18360
 Ni₂P₂, space gp., lattice parameters, relationship to Pd₂As₂ 4=26664
 Ni₁₂P₅, crystal structure 0=18347
 Ni—P solid solutions, acid deposited, atomic structure 3=20875
 Ni—P solid solutions, acid deposited, on heating, X-ray diffr. obs. 3=20876
 Ni—Pd with adsorbed H, magnetized, single transmission effect with slow neutrons 2=6672
 Ni—Pd alloys, heat capacity meas. at liq. He temp. for band structure determ. 4=15428
 Ni—Pd, elec. and mag. props., effect of H 3=20269
 Ni—Pd, 4-300°K, Hall effect and resistivity 0=20869
 Ni—Pd, ferromag. resonance, exchange integral 2=4241
 Ni—Pd, inter-diffusion at large temperature gradients 1=7599

Nickel compounds—contd

- Ni—Pd, mag. neutron scatt., rel. to H content 3=5020
 Ni—Pd, magneto-optical rotation 0=4400
 Ni—Pd thin films, spin-wave res. 3=1169
 Ni—Pt alloys, short-range order, effect of plastic deformation 4=13499
 Ni—Pt group metal alloys, mechanical props. 4=23188
 Ni₃Pt, effect of short-range order and annealing on micro hardness and charact. temp. 3=8906
 Ni₃Pt, paramag. susceptibility rel. to temp. 4=17626
 Ni₃Pt, short-range order, characteristic X-ray diffraction temp. 1=4066
 Ni₃Pt, short-range order, effect of preliminary treatment 4=1999
 NiRh₂O₄, antiferromagnetism, crystal transformation 3=23196
 NiRh₂O₄, crystal struct., atomic, tetragonal distortion, phase transformation 4=23460
 Ni²⁺Rh₂O₄, spinel, superexchange 4=13274
 NiS, formation at Ni surface, diffusion process 3=1387
 NiS, K X-ray spectra rel. to structure 2=21258
 NiS layers on Ni, Ni—S diffusion, effect of plastic deformation 1=983
 NiS, mag. structure, neutron diffn. meas. 4=28762
 NiS, para—antiferromag. transition, neutron diffn. study 3=15748
 Ni—S, phase diagrams and electrical conductivity 3=25734
 NiS, self-diffusion of Ni in polycrystals 3=20221
 NiS, self diffusion of S³⁻, 820-885° C, Ni³⁺, 750-880°C 3=8451
 NiS₂, electrical conductivity and magnetism 0=7934
 Ni—S liquid, immersed Ni bicrystal grain boundary grooving 4=15483
 NiS, Ni and S self-diffusion, expt. and theory 4=12798-9
 NiS₂, S—S distance 0=16322
 NiSO₄, antiferromag. structure 2=6679
 NiSO₄·H₂O, crystal structure 3=18327
 NiSO₄, irradi. by Au¹⁹⁸, catalytic H-currents by radiolysis 4=7775
 NiSO₄·6H₂O, double refraction 3=20446
 α-NiSO₄·6H₂O, heat capacity, 1 to 20°K 4=12648
 NiSO₄·6H₂O, use in filter for u. v. spectrometry 4=27304
 NiSO₄·6H₂O and NiSO₄·7H₂O, absorption spectra, down to 1.7°K 1=3835
 NiSO₄·6H₂O, NiSO₄·7H₂O, absorption spectrum, 2400-9100 Å, at -205 and 18°C 0=20985
 α-NiSO₄·6H₂O, NiSO₄·7H₂O, low temp. mag. props. 3=8644
 NiSO₄·6H₂O, NiSO₄·7H₂O, Raman spectra 0=2947
 NiSO₄·7H₂O, ionic susceptibilities, principal, meas. method 4=26268
 NiSO₄·7H₂[D₂]O, i.r. absorption spectra, 350-4000 cm⁻¹ 4=22880
 NiSO₄·7H₂O, SO₄²⁻ i.r. absorption bands 2=4155
 NiSO₄·7H₂O, u.s. velocities, elastic consts., and structure 3=20690
 NiSO₄, solid and molten spectra 2=17463
 NiSb, diamag. susceptibility 1=6271
 Ni—Se, heated to 600°C, electron diffn. study 3=25788
 Ni—Se layers, phase formation and transformations 4=7505
 Ni—Se, phase diagrams and electrical conductivity 3=25734
 Ni—Si alloys, oxidation, 1000°-1200°C 4=23642
 Ni₅Si₂, space gp., lattice parameters, relationship to Pd₅As₂ 4=26664
 Ni₅Si₂B, crystal structure 0=18360
 NiSiF₆, e. s. r. of Ni²⁺, temp. depend. 4=13328
 NiSiF₆·6H₂O, mag. sp. ht. 0=10214
 Ni₂SiO₄, i.r. spectrum 2=12603
 Ni₂SiO₄, phase transform., high press. 4=30798
 Ni—Sn phases, mag. props., temp. var. 4=4327
 Ni_{1-x}Sn, mag. moment rel. to sublattice metallic and covalent nature 3=1005
 Ni—Sn, tertiary creep, rel. to stress conc. 2=12857
 Ni—Ta alloy, grain growth kinetics 3=20904
 Ni—Ta alloys, paramagnetism, elec. resist., lattice parameters 4=26273
 Ni—Ta base cathode, emission currents 1=10729
 Ni—ThO₂ (2%), structure stability at 2000°F 4=13648
 Ni—Ti, ageing, phase growth and coagulation, kinetics 2=8855
 Ni—Ti alloys, elastic consts., rel. to temp., comp., heat treatment 2=23735
 Ni—Ti, elastic props., effect of temp. and composition 1=20305

Nickel compounds—contd

- Ni—Ti, plastic deformation, magnetic study 4=23189
 Ni—10.1 at. % Ti, precipitation of Ti, rel. to ferromagnetic Curie temp. 3=25755
 NiTiO₃, antiferromag., crystal structure 0=21200
 NiTiO₃, antiferromagnetism 3=15906
 Ni₂TiX, CsCl-type structure 3=1344
 Ni—U, Ni diffusion 2=14455
 Ni—V, magnetostriction and crystal anisotropy 1=12535
 Ni—8% V, X-ray thermal scattering, anomalies 0=16317
 Ni—W, sintered, U.T.S., temp. depend. 0=1866
 Ni—W, sintering 0=12070
 Ni—X (X = Rh, Ir, Os), magnetic props. 1=1207
 NiX₂NH₃ (X = Cl, Br, I) f.c.c., e.s.r. linewidths 3=1188
 Ni—Zn alloys, α-f.c.c., thermodynamic properties 3=25746
 Ni—Zn, disaccommodation mech. rel. to Fe²⁺ ion 2=16921
 NiZn ferrite, as acoustic pickup 1=2487
 Ni—Zn ferrite, with Co, temp. depend. 2=12790
 Ni—Zn ferrite with CoO inclusions, magnetic spectrum, temp.-dep. 2=12793
 Ni—Zn ferrite, complex permeability 2=8629
 NiZn ferrite, ferromagnetic reson., 4.2 and 293°K, 3.2cm 3=6740
 Ni—Zn ferrite, growth, rel. to porosity 3=3269
 NiZn ferrite, Hall effect and semicond. props. 0=7935
 Ni—Zn ferrite, hollow cylinders, magnetization, effect of twisting moment 4=13249
 Ni—Zn ferrite, hysteresis loops meas. 2=15981
 Ni—Zn ferrite, initial permeability, γ-ray effects 2=8617
 NiZn ferrite, irreversible magnetic stress effects in Raleigh region 3=8690
 Ni—Zn ferrite, n.m.r. of Fe⁵⁷, pulsed method meas. 4=4426
 NiZn ferrite, permeability and domain walls 1=20139
 Ni—Zn ferrite, polycryst., crystal growth 2=23821
 NiZn ferrite, production and applications 4=28846
 NiZn ferrite, specific heat, 20-350°C 0=7853
 Ni—Zn ferrite, thermal dilatation 2=12391
 Ni—Zn ferrite, u.s. wave propag. vel. and elastic const. 3=17652
 NiZn ferrite, Young's mod. and internal friction 0=11971
 Ni—Zn ferrites, Barkhausen effect 4=1841
 Ni—Zn ferrites for communications techniques 2=16922
 Ni—Zn ferrites, Co-substituted, diffusion after-effect 4=4377
 Ni—Zn ferrites, Co-substituted magnetic props. 4=13248
 NiZn ferrites, cooling after sintering 1=6549
 Ni—Zn ferrites, diffusion aftereffect below 90°K 3=5022
 Ni—Zn ferrites, disaccommodation by small amplitude signals 4=28845
 Ni—Zn ferrites, elec. cond. rel. to porosity 3=4939
 Ni—Zn ferrites, elec. resist., pressure depend. 3=4940
 Ni—Zn ferrites, electric rel. to magnetic properties 3=8684
 Ni—Zn ferrites, electrical props. 3=20336
 NiZn ferrites, Fe-rich, "perminvar" effect 0=10175
 NiZn ferrites, ferromagnetic relaxation 1=17973
 Ni—Zn ferrites, hysteresis loops, effect of Co additions 2=21337
 Ni—Zn ferrites, mag. permeability spectra, temp. depend. 2=23677
 NiZn ferrites, magnetization, meas. using ferromag. resonance 1=1240
 Ni—Zn ferrites, permeability in polarizing fields 4=26341
 Ni—Zn ferrites, polycrystalline, crystals growth 3=6822
 Ni—Zn ferrites, props. at 10 kMc/s 1=14737
 NiZn ferrites, solubility of ferric oxide 0=21232
 Ni—Zn ferrites, thermal cond. meas., 20°-400°C 3=25214
 NiZn ferrites, thermal conductivity 3=17669
 Ni—Zn—Co Fe garnet, complex permeability, freq. var., heat treatment effects 4=4385
 Ni—Zn—Cr ferrite, with CoO, mag. anisotropy, -196° to 300°C 4=30722
 NiZnCo ferrite films, and mag. props. 3=16140
 NiZnCo ferrite, mag. dispersion rel. to sintering temp. and composition 3=18100
 Ni—Zn—Co ferrite, mag. props. and annealing 3=3130
 Ni—Zn—Cr ferrites, magnetic props. rel. to thermal and thermomagnetic treatment 4=10293
 Ni—Zn—Co ferrites, magnetocryst. anisotropy 3=23190
 NiZnCo ferrites, magnetoelastic effect 3=20614
 Ni_{1-x}Zn_xFe₂O₄, prep., mag. and microwave props. 2=12696

Nickel compounds — contd

- 0.2Ni-0.8ZnFe₂O₄, specific heat, 1.8-20°K 2=571
 Ni_{1-x}Zn_xFe₂O₄ thermal conductivity 3=4831
 NiZr, crystal structure 2=10879
 Ni—Zr supercond. solenoid, 10 kG, design 4=8897
 Ni₂ZrAl, Cs Cl-type structure 3=1344
 NiZrH₃, NiZrD₃, space group, atom pos., comp. with X-ray results 4=29125
 NiZr₂, crystal structure 2=10879
 Ni₁₀Zr₇, crystal structure of intermediate phases 2=21528
 XNi₂ (X = yttrium or lanthanide), magnetic props. of Laves phases 3=15746

Niobium

- absorption, acoustic, peaks at var. temps., and dislocation relax. 4=15417
 alloys, superconductivity 3=16873
 anodic film, structure 3=23507
 anodization, radio tracer study by Cl³⁶ and S³⁵ 3=25830
 atomic and electronic heats, 10-273°K 0=20752
 band structure from X-ray spectra 3=4979
 brittle fracture, transition temp. rel. to grain size 1=11506
 brittleness in H₂ atmosphere, rel. to O₂ in solid solution 4=1958
 catalytic reaction with propylene 3=13605
 chemical analysis, in Ta foil, using Nb⁹³(p,n)Mo^{93m} 3=8992
 cleavage fracture 1=20384
 cold worked, dislocation relaxation spectrum 1=7821
 conductivity, thermal and elec., 0°-1000°K 4=25869
 contact potential to tungsten 4=6931
 creep, compressive, 800°-1200°K 3=13362
 creep at low temps. 4=28972
 crystal growth using induction plasma torch 2=2365
 crystal lattice dynamics anomalies 4=3979
 crystal twinning, mechanical, interstitial effects 4=13518
 crystallization from vapour 4=2031
 crystals, glide systems 1400°-2300°K 4=4483
 deformed by cold working, imperfections study, hardness and X-ray diffract. data 0=13529
 de Haas—van Alphen effect 1=17931
 diffusion in bimetal couples at 1100°K 2=3954
 diffusion of Co⁶⁰, Fe⁵⁵ and self-diffusion 2=14463
 diffusion with Cr, Fe, Ni, Mo, stainless steel 2=3943
 diffusion of H₂, degassing, above 1000°K 4=22620
 diffusion, in liquid cast Fe, by electrolysis 3=5431
 diffusion of O₂ 2145-2350°K, degassing 4=22620
 diffusion in Ta, obs. by submicron sectioning technique 4=12804
 diffusion in Zr of Nb⁹⁵ 4=6881
 domain patterns, electron diffraction obs. 4=10578
 ductility at He temps. 4=23191
 elastic constants, for single crystals, 27°K 1=3954
 elastic limit, lower, var. with grain size, heat treatment effects 4=4482
 elastic moduli 4=28977
 elastic moduli, normal to supercond. transition 2=7508
 electrical resistance, high pressures 2=616
 electron scattering, energy loss 3=2040
 embrittlement by surface gas contamination 3=20755
 emissivities, 500-1100°K meas. 2=11533
 emissivity, blackness, 1200-2500°K 4=30687
 emissivity, 0.65 μ 4=16285
 energy band structure by isochromat meas. 3=15468
 evaporated films, prep. and use 0=14086
 Fermi levels, from X-ray emission bands 3=4838
 field emission in normal and supercond. states 1=18910
 field emission patterns 4=21557
 film, hard superconductor, prep. and props. 4=24501
 films, supercond., prod. 2=19816
 films, supercond., prod. by protected sputtering 2=17720
 films, superconducting, from exploding wires 4=8570
 films, superconducting, size effects 4=14538
 films, vapour-deposited, superconductive, use as getter 4=11481
 flow stress rel. to temp., mechanisms 3=13352
 fluorescent L-spectra 2=14694
 fluorescent yield of L-shell 4=3774

Niobium—contd

- internal friction, anelasticity produced by plastic deformation, 4.2-300°K 0=10258
 internal friction, dislocation relaxation 2=21412
 internal friction, effect of Zr impurities 2=23738
 internal friction peaks, deform.-induced 3=23303
 internal friction and dislocations 1=6446
 internal friction, low-temp. peak 1=11504
 interstitial—dislocation interaction 3=23309
 magnetic susceptibilities and electronic specific heat temp. variations 4=7356
 magnetic susceptibility, liq. He to room temp. 0=13736
 magnetization curves, rel. to superconductivity 3=11066
 magnetoresistance, in high-field limit 2=3992
 mechanical props., of irradiated specimens 0=16232
 microstraining in polycrystalline Nb 4=23192
 n.m.r., supercond., Knight shift component separation 4=20625
 neutron effects, recovery at 150°K, vacancy migration 4=12729
 neutron induced lattice defects rel. to resistivity 3=22769
 neutron resonance absorption meas. 3=17484
 optical properties, 1-15 μ, plasma and relax. freq. 4=26209
 oxidation, surface temp. increase 4=23641
 permeability of H₂ 2=10411
 persistent currents, mag. effects 3=3951-2
 phase transformations involving interstitials 4=17766
 physical properties 1=5952
 plastic deformation of single crystals, rel. to orientation 4=20677
 plastic flow and yielding 3=23314
 point defects, recovery meas. 2=23151
 polycrystalline, stress effect on Lüders band velocity 4=23193
 polycrystalline, yield and fracture 0=16231
 recrystallization—centre growth 2=19100
 resolidified drops, voids 1=20631
 single crystals, dislocations 3=22780
 single crystals, supercond., mag., thermal props. 3=5589
 sorption of N₂, ~10⁻¹⁰ torr. temp. var. 4=26718
 spec. heat, lattice, in supercond. and normal state, difference 0=19565
 specific heat, 0.4°-4.2°K, Debye temp. 4=20215
 specific heat, 1200°-2400°K 3=10596
 specific heat, supercond. and normal, meas. 4=18593
 spin-lattice relaxation 2=18957
 sputtering, under Cs ion bombard., cathode sputtering ratio 4=24753
 stacking faults, by electron micrograph observation 2=598
 stress, shear, under pressure, annular specimens 3=6784
 substructure after filing, rel. to plastic and elastic props. 4=23194
 supercond. magnet, use in nuclear orientation studies 0=11299
 supercond. transition temp., effect of Fe in dilute solutions 1=3882
 superconducting, absorption, u.s., shear, 75-225 Mc/s, and 2ε₀ 4=16355
 superconducting, circulating current, shot noise 4=21416
 superconducting, containing dissolved gases, resist. transitions and current density 4=18592
 superconducting, effect of dissolved gases 4=408
 superconducting, effects of dislocation config. 4=27426
 superconducting, electronic sp. ht. 0=8948
 superconducting energy gap, by electron tunnelling 3=333
 superconducting, energy gap, ultrasonic determ. 4=14526
 superconducting, far-i.r. absorption 0=14933
 superconducting films, critical fields, transition temps., meas. deposition method effect 4=29838
 superconducting films, critical mag. fields 4=16354
 superconducting films, energy gaps 4=14530
 superconducting films, getter sputtering for prep. 4=14231
 superconducting films prep. by "protected sputtering" 4=18587
 superconducting, H_{c3}/H_{c2} ratio, Saint-James—de Gennes calc. 4=29839
 superconducting, high field transition 3=19114
 superconducting, mag. behaviour, study by heat pulse ballistic technique 4=16353
 superconducting magnetization curve, crit. field 4=18589

Niobium—contd

- superconducting, negative surface free-energy effects 3=3961
 superconducting, props., effect of plastic deformation and annealing temp. 2=2960
 superconducting, surface electrical losses, in l.f. fields 3=12033
 superconducting, thermal cond., effect of plastic deformation 0=8938
 superconducting transition temp. 3=22662
 superconducting, transverse u. s. atten. for $ql < 1$ 4=6729
 superconducting tunnelling in Nb-NbO-Pb sandwich 1=9514
 superconducting, upper critical field 4=27425
 superconducting, at upper crit. field, discrepancy 4=18573
 superconducting wires, critical current var. with polarity 4=14527
 superconducting wires, quantum interference effects 4=24499
 superconducting wires and ribbons, Nb₃Sn covered, critical currents 4=27431
 superconductive critical current, a.c., freq. var., in wires 4=11478
 superconductive temp. controller, below 1°K 3=1880
 superconductivity, anomalous resistive transitions 2=1337
 superconductivity critical current-critical field values 2=7513
 superconductivity, electron tunnelling study 1=16199
 superconductivity, energy gap, u. s. meas. 4=18588
 superconductivity of films, crit. temp. variation 4=5523
 superconductivity of films, temp.-thickness and aging effects 4=5522
 superconductivity of Nb₃Sn-coated wire 2=13516
 superconductivity, periodic struct., neutron diffr. obs. 4=18591
 superconductivity, surface losses at low freq. 4=2914
 superconductivity, upper crit. field, var. temp., cond. 4=18590
 superconductor, a.c. losses 4=11485
 tensile props. at low temps. 2=10767
 tensile strength, 0°-2300°C 1=20378
 tensile yield stress, effect of strain-rate 3=1237
 thermal cond. meas., 1.6-15°K 3=25215
 thermal cond., normal and supercond. 0=10843
 u. s. attenuation in normal and supercond. Nb 4=11480
 thermal cond., normal, supercond. states 2=6292
 thermal cond., 0.2-4.2°K 2=8183
 thermal expansion, low temps. 2=7439
 vacancy formation 4=1463
 vacuum-arc evaporation 1=6688
 variation of elastic moduli at superconducting transition 1=11884
 wires, supercond., mag. and thermal effects 4=27423
 work hardening, dislocation mechanisms and rate theory 4=7444
 work function 4=6931
 X-ray diffr. from layer faults 2=23840
 X-ray emission spectra 0=15327
 X-ray L_β emission spectrum 2=12608, 16841
 X-ray M-emission spectrum 1=14618
 X-ray spectrum, absorpt. edges, L_{III} L_{II} 3=23095
 yield and flow stress meas., 4.2-373°K, and thermally activated flow mechanism 4=28970
 yield stress at low temps. 1=6454
 yield stress, temp. depend. 4=4480
 Young's modulus, temp. variation 1=2504
 L_β emission band, correction 3=4978
 Nb⁴⁺ ions in ethanol glass, e. s. r. 3=15946
 Nb^m, isomeric state 2=18262

Niobium compounds

- borides and carbides, thermoelec. power with Cu 1=12465
 fluorescent, L-series, with N, Si, H 2=14695
 niobates of Mn, Co or Ni, solid solns., based on BaTiO₃ 0=7979
 oxide films, photovoltage 0=9998
 oxides, structure and transformation, from X-ray and electron diffr. 3=13458
 superconducting Nb-Ta mixed crystals, trapped magnetic flux in 0=7027
 (Fe,Mn)(Nb,Ta)₂O₆, crystal structure 1=11571
 M²⁺ niobates, photoluminescence, self-activated 4=26244

Niobium compounds—contd

- N₂O₆ films, on Nb, mechanical, optical and elec. props. 0=14085
 Nb alloys, physical properties 1=5952
 Nb arsenides and monophosphides, crystal structure 4=4617
 Nb-base binary alloys, lattice parameter, hardness, and elec. resistivity 4=17813
 Nb borides, carbides and nitrides, elec. props. 1=3707
 Nb carbide, supercond. transition, rel. to composition 2=2962
 Nb halides, thermal expansion at low temp., expt. 4=17369
 Nb oxide anodic films, i. r. spectrum 4=23566
 Nb pentoxide, semicond. props. 2=14564
 Nb₂Al, structure, density 0=3221
 Nb₃Al, supercond., critical temp. 2=22120
 Nb₃Al, supercond., evidence for negative surface energy models 3=5591
 NbAl, superconductivity and mag. props. 3=14455
 NbAs, structure, z-parameter and shortest interatomic distances 4=29126
 Nb₃Au-V₃Au, superconducting transition temp., diff. for two crystal struct. 4=14528
 NbB, crystal structure, rel. to similar types 3=18338

 collisions with light element ($Z=2$ to 18) ions, electron
 loss 2=9535
 collisions with light element ($Z=2$ to 18) ions, electron
 loss 3=7448
 compressibility coefficients, law 1=9417
 compressibility, theory rel. to expt. 2=19605
 condensates containing N atoms at 4.2°K, evapora-
 tion 0=3291
 condensation coeff., -146° to 400° 0=6834
 condensed film at low temp., optical props. 0=740
 cooling of adiabatic He liquefier 0=14918
 critical opalescence, X-ray scatt. obs. and
 compressibility 4=29676
 crystal structure of β -N 3=6839
 dielectric const. of gas up to 1000 atm 0=19204
 dielectric constants, audio frequency meas. 4=27227
 diffusion of Ag 2=18608
 diffusion of atomic N in molecular N 1=7913
 diffusion of CO_2 in He- N_2 mixture 0=10688
 diffusion in Cr, anelastic meas. 2=21061
 diffusion and drift of electrons in 0=14973
 diffusion in Fe 2=21074
 diffusion, in He and CO_2 , and intermol. potentials 2=2764
 diffusion of Kr^{85} in dense gas 3=1720
 diffusion, in liq. O_2 , meas. 2=9266
 diffusion in liq. oxygen, gas phase method 4=5168
 diffusion of methane and ethylene, meas. 4=11238
 diffusion, in N_2-SO_2 , 300-480°K 1=15946
 diffusion processes in plasma column 0=15023
 diffusion, solubility and permeability in Vycor glass 0=5051
 diffusion, thermal, in Zr 1=14326
 diffusion in UO_2 , kinetics 4=28493
 discharge, afterglow, pink, not due to $N^+(S)$ atoms 4=14596
 discharge, electric, h.f., afterglow, electron density
 var. with time, and aurora 4=532
 discharge, electric, h.f. torch, electrode erosion,
 lack of for Al 4=8667
 discharge, pinch, linear collapse stage streamers 2=22196
 dispersion, acoustic, light diff. meas., and vibr. relax.,
 press., temp. var. 4=18249
 dispersion, sound, up to 500 atmospheres, 500°C 3=7242
 dissociation energy 0=2760
 dissociating gas, high temp. transport props. 2=13372
 dissociation, by inert gas ion impact 4=29875
 dissociation by neutron bombardment 4=3918
 dissolved in V, mobility, effect of pressure 1=2396
 effect on Al_2O_3 fracture strength 4=28935
 effect on fatigue and creep in Fe and Fe
 alloys 4=28957
 effect on Ta solid films 4=13685
 elec. discharge, spatial expansion 2=3013
 elec. discharge, Townsend type, and in N_2-CH_4 0=12595
 electric discharge, condensed in high vac.,
 appls. 4=27497
 elec. breakdown data 0=2340
 elec. breakdown lag at $pd=1000$ mm Hg cm 0=2356
 elec. breakdown, u.h.f., time-lags 3=7491
 elec. discharge, gas-ionizing radiation 2=17795
 electric discharges, h.f., active N prod. 4=3865
 electric sparks in, channel expansion 1=18790
 electrical breakdown, Paschen curve 4=5579
 electrodeless discharge, electron mobility meas. 0=7094
 electron avalanche development 4=21467
 electron avalanche transition into streamers 3=24237
 electron avalanche transition to streamers 4=24617
 electron avalanches, carrier amplification 3=9761
 electron avalanches, mean energy and drift
 velocities 4=11546
 electron avalanches, in uniform elec. fields, electron
 component 1=272
 electron beam energy losses passing through N_2 0=19764
 electron capture in, by ions with $Z=(2-18)$ 1=18779

Nitrogen—contd

- electron capture in, by multicharged ions of light elements 2=163, 22168
 electron collision frequencies 0=3350
 electron diffusion—mobility coeffs. ratio 3=4023
 electron diffusion, slow, meas. 2=13381
 electron drift speed—diffusion coeff. ratio meas. 4=11254
 electron drift velocity 0=7074-5
 electron drift velocity, avalanche meas. 4=11253
 electron drift velocities meas. 3=12077
 electron drift velocity 3=9729
 electron drift velocity, 77-373°K 1=2300
 electron excitation of second positive system bands 0=1521
 electron irradi., free electron loss 3=14598
 electron mobility in N_2 2=7562
 electron momentum transfer and inelastic collision cross-sections 4=27228
 electron and positron multiple scatt. 3=17248
 electron scatt., elastic and inelast., from electron transport 4=11509
 electron stopping power 0=352
 electron trapping by impurity in liquid argon 3=19175
 emission bands of forbidden systems 0=5955
 energy loss per ion pair for p and He^+ 3=10281
 equilibrium props. behind shock waves 3=21493
 excitation by metastable Ar atoms 4=6572
 excitation of molecule by electron impact, using trapped-electron method 0=2755
 field desorption and corrosion of W and Ir 3=18396
 field emission, emitting area 2=13581
 flame propagation in solid 0=3681
 flame propagation in solid N 1=20737
 flash desorption 1=4100
 flow, two-phase, idealized solutions 4=11152
 forbidden band systems 0=7788
 free—free continuum 1=11069
 fugacity and function $F = H - TS$ 0=14910
 gamma ray absorpt., H Lyman, and atmospheric N content 4=26787
 γ -ray absorption 2=5599
 gas, acoustic isotherms 3=16659
 gas, Aston bands, rel. to ionization 3=4020
 gas, discharge detector 3=8993
 gas, discharge, l.p., "electron" and "vibrational" temps. 3=9763
 gas discharge, positive column, electron energy distrib. 3=4058
 gas, dry, prodn. 4=4996
 gas, electron back diffusion in 3=5693
 gas flow, free-molecular, momentum transfer to metal surfaces 3=5456
 gas, fluorescence and pre-ionization 3=14220
 gas, ionization by H atoms and protons, 10-180 keV 3=5620
 gas, sound velocity and absorption 3=9509
 gas, thermal cond. rel. to viscosity 2=11423
 gas, velocity of sound 3=5497
 gas, viscosity, - 78.5° to 100°C, below 200 atm 3=7223
 gas, Z-pinch discharge, rel. to pressure 3=9762
 gaseous, nucleation temp. 3=303
 gettering, electrical in low-pres. discharge in steel vessel 3=7461
 glow discharge, energy distrib. to electrodes 2=17800
 glow discharges, electron energy distrib. in plasma 1=16317
 heat of adsorption on W 0=3328
 heat-transfer, ionization effects 3=18853
 i.r. absorption, collision-induced 2=2775
 impurity centres in diamonds 1=14258
 impurity in Fe, ageing 1=8905
 influence on Hg atom excited states 2=6090
 infrared continuum, 2-8 μ , at high temp. 4=2732
 interaction with Mo ribbon 1=11600
 intermolecular, Morse potential force consts. from viscosity 4=9787
 intermolecular potential functions, 2nd virial coeff. 1=7503
 interstitial in Fe, effect on recovery and recrystallization 4=22565
 ion-atom interchange in upper atmosphere 0=14200
 ion collision data by ion cyclotron reson. 3=21697
 ion drift velocities in glow discharge 3=24221
 ion drift velocities meas. of $N^+_{1,2,3,4}$ 4=11535
 ion-electron recombination in after glow 2=3008

Nitrogen—contd

- ion emission, field 3=19371
 ion mobilities meas. for N^+ , N_2^+ , N_3^+ and N_4^+ 4=11536
 ion mobility and electron attachment probabilities rel. to O_2 and water vapour 3=5624
 ion, N^{14} , charge distrib. at high velocities 3=7447
 ionization afterglow meas. with 20-30 MeV electrons 4=14579
 ionization ahead of cylindrical shock waves 3=1759
 ionization by α -rays, energy depend. of W 1=8310
 ionization cross-sections near threshold, electron impact 1=16257
 ionization, by electrons and protons, Born approx. 2=9529
 ionization, He atoms and ions, 15-180 keV 4=2944
 ionization by N_2 molecular beam, cross-section 2=1390
 ionization, photo, up to 28.6 eV, on excitation 4=16434
 ionization by Po α -particles 0=19613
 ionization in pulsed discharge 2=1387
 ionization rate, theory 1=18755
 ionization by 10-50 keV H and O $^+$ ions 0=12579
 ionization, by 30-1000 eV He atoms, meas. 4=27482
 ionospheric, rel. to height and latitude 2=8987
 ions, atomic, recombination, thermal and radiative props 3=7443
 ions, bombard. of Cu, sputtering ratios 0=9110
 ions, bombard. of Cu-Be, electron emission 0=267
 ions, bombard. of Mo, Zr, graphite, secondary emission 2=220, 22273
 ions, bombard. of W-Ge and W-Si contacts, V-I curves 1=17771
 ions, charge transfer with atomic O 3=14531
 ions in glow discharges, mass spectra 3=5643
 ions, kinetic energy meas., line shape analysis in mass spectrometer 4=16565
 ions, N^+ and N^{2+} , electron affinity and stability calc. 4=9643
 ions, N, range in solids and gases 2=7674
 ions, N_2^+ , absorption coeff., 580-1000 Å 3=25101
 ions, N_2^+ , in aurora, height variations rotational temps. 2=4674
 ions, N_2^+ , charge transfer cross-section with O atoms at low-energy 2=22173
 ions, N_2^+ , $2\pi^2$ - $A^2\pi$ system, Frank-Condon factors and r-centroids 2=12322
 ions, N_2^{2+} electronic transition identification 2=3734
 ions, N_2^+ , N_2^+ in glow, drift velocity studies 4=24576
 ions, N_2^{2+} , potential curves eval. 2=20816
 ions, N_2^+ , potential and wave functions calc. 2=18430
 ions, N_2^+ , spectrum in aurora, use in temp. meas. 3=9104
 ions, N^{14} , accel. to 100 MeV in ORIC 3=5734
 ions, N^{14} , energy loss and range in solids 2=1931
 ions, N^+ , 3P state, dielectronic recomb. 2=15889
 ions and neutral gas, effects of H_2^+ beam 2=13532
 ions, range in air 0=2327
 ions, range in gold, 0.4-6.4 MeV 3=4211
 ions, range and ionization in emulsions 0=12772
 isotope fractionation in NO- NO_2 systems 2=4527
 isotope separation between nitrogen oxides and nitrosium salt solns. 1=5985
 isotopes, solid, lattice parameters, unit cell volume 4=2085
 isotopic anal., mass spectra 1=19633
 isotopic analysis 2=20061
 in Jovian atmosphere 4=4885
 K atom beam scattering on, Massey-Mohr cross-section 0=11499
 K-L-L spectrum, fine structure 0=17715
 laser action in atoms from mol. dissociation 4=11828
 laser, u.v. 4=19294
 light source, fast 4=24359
 liquefaction, new refrigeration cycle 2=5214
 liquefied, positive ion mobility meas. 4=27194
 liquid, automatic device for supply 2=17707
 liquid, automatic level controller 3=24125
 liquid, automatic pumping system for particle accelerators 4=8880
 liquid, boiling point, absolute meas. 0=1086
 liquid, breakdown, electric, mechanism, impurity effects 4=5200
 liquid, constant-level system 1=2582
 liquid, construction of hydrostatic gauge 4=11438
 liquid, cool-down conditions, in contact with various materials 4=11436

Nitrogen—contd

- liquid, critical consts., calc. from quasi-f.c.c. lattice model with vacancies 1=1739
 liquid, density as function of pressure and temp. 1=8107
 liquid, density rel. to pressure 2=7190
 liquid, elec. strength, electrode surface effects 0=12423
 liquid, evaporation of ions 0=8901
 liquid, film boiling 0=3696
 liquid, level controller 1=5373
 liquid, level meas. and maintenance 2=19790
 liquid, and mixtures with O₂, X-ray diff. meas. 4=24170
 liquid N₂ and N₂-O₂ mixtures, velocity of sound 0=124
 liquid, nonlinear acoustic parameters meas. 4=14161
 liquid, shock compressibility 2=7192, 13320
 liquid, sorption on Vycor porous glass 2=9472
 liquid sound vel., u.s., at high press. 0=19132
 liquid, structure 2=21894
 liquid systems, binary, with A, O and CO 3=132
 liquid, ultrasonic velocity 2=21908
 liquid, viscosity 4=5161
 Lorentz-Lorenz functions 0=8713
 lubricating full journal bearings 0=5046
 Lyman-Birge-Hopfield, bands in Martian atmosphere 4=10880
 magnetic driving and ohmic heating 0=14984
 maser, optical, band spectrum stimulation in pulsed discharge 3=19499
 metal halide flames, with active N, metal spectra 3=22605
 in metals, chromatographic gas analysis 2=21603
 metastable atoms and mols. from elec. discharge 3=2571
 meteors, i.r. spectra 2=4757
 microwave absorption in compresses gas 2=13380
 mixtures, with H₂, thermal and ordinary diffusion, u.s. velocity meas. 0=5049
 mixtures with H₂, vapour-liquid equilibrium 2=1311
 molecular beam apparatus, high intensity 3=8316
 molecular beams, clustered, prodn. 3=2678
 molecular excitation, vibr., by e, anharmonicity effects at higher levels 4=12463
 molecular ion, N₃⁻, ground-state wave-function 1=9939
 molecular ions 0=2323
 molecular orbitals for small internuclear separations 2=18443
 molecular, photosensitized reaction with H atom 2=17096
 molecular pot. energy, in clathrates 2=8076
 molecular rotation 2=8075
 molecular spectrum, excited by 0.5-1 MeV protons 0=5942
 molecular spectrum, far i.r., rot., collision induced dipole moments 3=17580
 molecular, in upper atmosphere to 400 km 3=9067
 molecule, A²Σ_u⁺ and B¹Σ_u⁺ terms, splittings 3=6388
 molecule, absorpt. bands, 720-830 Å, vibr. isotope shifts 4=22362
 molecule, absorpt. spectrum and electron structure 3=4754
 molecule, diamag. suscept. calc. 3=8259
 molecule, elec. polarizability tensor calc. 4=1256
 molecule, excit. by N₂⁺, emission cross-sections for N₂⁺ and NII 4=12464
 molecule, first negative system, in He 3=2622
 molecule, Goldstein-Kaplan bands 3=8262
 molecule, i.r. Y bands, structure 0=15724
 molecule, mag. antishielding const. of N, meas. 4=12519
 molecule, neutron scatt., quantum states transition 3=25074
 molecule, new predissociation 0=13435
 molecule, reactions with H and D atoms in ²P state 4=13724
 molecule, recomb., three-body reaction kinetics 4=1319
 molecule, rotational transitions due to He 3=6431
 molecule, second positive spectral system 3=2620
 molecule, second positive system, effect of He 3=2621
 molecule, spectral lines excited by 5-130 keV protons 4=9716
 molecule, vacuum u.v. absorpt. spectrum 3=7329
 molecule, vibr. excitation by electron impact, meas. 4=28196
 molecule, wave-function calc. by analogue computer 2=6204
 molecule, wave-function, LCAO calc. rel. to internuclear distance 1=8854
 molecules, A³Σ_g⁺ state, by microwave discharge, diffusion, lifetime 3=17579

Nitrogen—contd

- molecules, absorption coeff., 580-1000 Å 3=25101
 molecules, band excitation in aurora, near u.v. 4=23789
 molecules, collisions, 10 → 01 transition calc. errors 4=22443
 molecules, dissociative charge transfer from He⁺ 3=24224
 molecules, excitation, by electrons, vibr., life-time 4=22361
 molecules, lifetime of lowest excited level 2=16516
 molecules, long-lined metastable state at ~ 8 eV 3=2618-19
 molecules, quadrupole moment, from induced i.r. absorpt. 4=6573-4
 molecules, rotational excitation in ionospheric D-region, electron cooling 3=3499
 molecules, second positive system, intensity ratios 2=20812
 molecules, u.v. absorption spectrum 2=14285
 molecules, vibrational excitation by electron impact 2=3729
 n. m. r. of N¹⁵ in liquids (0.36%), chemical shifts, elec. quadrupole contrib. by intermolecular rot. hindrance 4=24247
 n. q. r., in FCN¹⁴ 4=9735
 nuclear quadrupole resonance of N¹⁴ in solid N₂ 2=8692
 nuclear quadrupole resonance in organic cpds. 1=12574
 occlusion by faujasite crystals 0=8333-4
 omegatron, removal, rel. to chemical effects 4=21595
 optico-acoustic effect 0=8715
 oscillator strengths of N I multiplets 1=12252
 peak electron density, curvature 1=15064
 phosphorescence of films deposited at low temp. 0=6200
 photoionization and absorption spectra, 600-1000 Å meas. 4=12460
 pinch discharge, delayed implosion of Z-pinch 4=540
 pink afterglow, excitation mechanism 3=22486
 plasma, arc heated, spectral continuum meas. 4=14652
 plasma arc, high density, mag. probe meas. 4=5606
 plasma, conductivity, thermal and electrical 3=7589
 plasma, electron-ion recomb. study 2=22229
 plasma, 5.4 kJ linear Z-pinch, collapse stage meas. 4=8737
 plasma flows, high speed, microwave diagnostics 4=18903
 plasma gun, two-stage, repetitively fired, coaxial, characteristics 4=19068
 plasma, heavy-particle temps., spectral meas. 4=14676
 plasma, high density, magnetic probe meas. 3=7583
 plasma jet, anode spot movements 3=14539
 plasma, N IV collective motion, spectr. meas. 3=24304
 plasma, ohmic heating by condenser discharge 3=7600
 plasma, optically thick in red, i.r. 3=16924
 plasma properties, 1000-30 000°K, 1-30 atm. 1=10700
 plasma, spectral line intensities 2=17845
 plasma wrapped round Cu vapour, contraction and emission 3=7557
 plasmajet i.r. emission spectra 1=11070
 positron annihil. in liq. and solid 3=17254
 positron annihil. mean life in liq. and solid 4=4031
 positron range and positronium effects 4=6028
 positronium formation and quenching meas. 4=19495
 positronium formation and quenching meas. 4=19496
 potential energy curves 0=17734
 pre-breakdown current pulses, rise-time 2=7587
 proton beam, fast, discrete energy losses 4=11517
 pumping by Bayard-Alpert ionization pump 1=15971
 radiation from shock-heated gas, 6000°-7000°K 2=9319
 radiation spectrum, shock wave heated 3=11835
 Raman spectra 0=17746
 Raman spectrum of liquid, laser stimulated 4=8210
 Raman spectrum, temp. and press. depend., impact broadening 0=11527
 reactions with inert gases at high pressures 3=3387
 recombination column of ions and electrons 0=14983
 Redhead vacuum gauge sensitivity pumping rate 2=21954
 refractive dispersion in u.v. 0=16821
 refractive index, vac. u.v., using Cherenkov radiation 3=14214
 refractivity, second virial coeff. 3=3835
 relaxation time, temp. depend. 3=8313
 rotation excit. by electrons, energy loss 3=17578
 saturated vapour pressure, exper. data, anal. and correl. 4=29803
 scattering by C foils 0=7590
 in scintillation counters, mixed with A, Xe, for neutron detection 1=3077

Nitrogen—contd

secondary electron emission, inert gas ion bombardment, up to 50 keV 4=8824
 shock-front structure and reflectivity 1=167
 shock fronts, non-equil. region, radiation 2=2757
 shock fronts structure, optical refl. meas. 4=5282
 shock heated, nonequilibrium radiation 2=7566
 shock wave temp. 0=14732
 shock waves, attenuating, temp. variation, theory and expt. 4=18344
 shock waves, rate of dissociation 2=19597
 solid, α -phase, crystal structure 2=15012
 solid, containing O_2 , spectrum under electron bombard. 1=6221
 solid, luminescence 0=6195
 solid, luminescence, 4.2°K 0=13711
 solid, molecular rotation, calc. 0=15804
 solid, N^{14}/N^{15} isotope exchange under electron bombardment 0=6400
 solid, nuclear quadrupole resonance 3=8742
 solid, phosphorescence 0=4456
 solid, solubility meas. in 27°-33°K liq. H 2=11365
 solid, thermoluminescence after electron bombardment at 4.2°K 2=12637
 solubility in Be, X-ray diffrac. study 3=20908
 solubility and diffusivity in polyethylene 0=12066
 solubility in distilled water 4=11184
 solubility in H_2O , heats and entropies 4=159
 solubility in H_2O , isotope effect 3=9450
 solubility in liquid H_2 , 20-33°K, 35 atm 0=75
 solubility in steel, cold-rolled transformer 4=26541
 in solution with CH_4 , condensed state, density 1=12873
 sorption coeff., Ti droplet getter-ion pump 0=16742
 sorption speed during electron impact activation 4=18295
 sorption, on Nb, Mo, $\sim 10^{-10}$ torr 4=26718
 sound absorption and dispersion 0=19287
 sound absorption, freq./press. depend. 1=8186
 sound absorption, pressure depend. 0=16737
 sound absorption, water vapour effects 3=18860
 sound velocity at b.p. as temp. meas. 0=216
 sound wavelength meas. in tube 3=5502
 spark channel brightness 1=5428
 spark channel brightness 1=10681
 spark discharge channel props. 2=22185
 spark discharge, emission spectrum, 5000-10 000 Å 1=19593
 spark discharges, high-temp. prod. 0=7105
 spark discharges, I, V and spectral line intensity, time depend. 1=283
 sparks, formative time lag meas. 4=8657
 spectra, emission, excited by protons and H atoms 3=15338
 spectra excitation by reaction with active He 4=11533
 spectra of glow discharges 0=1520
 spectra in highly ionized state, meas. 3=10448
 spectra, N^{14} , h.f.s., pressure shift, 7-87 torr 3=19941
 spectral bands, Lyman-Birge-Hopfield, in upper atmosphere 4=10739
 spectral composition in lab. or aurorae, rel. to average electron energy 2=6149
 spectral obs., r.f. excited jet 3=22545
 spectrum, first positive system, in perseid meteor spectra 1=4195
 spectrum, i. r. continuum, high temp., polarization inclusion in calc. 4=27222
 spectrum, N VI, N V, 8000-480 Å 4=15286
 spectrum, N_2^+ , D²Tg-A²Tu band origin wave-numbers 3=22547
 spectrum, N_2^{15} , u.v., isotopic shifts, anomalous 3=25102
 spectrum, plasma Stark effect of local fields 4=9645
 spectrum, vac. u.v. absorption, "pink" afterglow 4=12431
 spectrum, from Van de Graaff beam passed through C foil and imaged on Raman spectrograph 3=19918
 sun, i.r. spectrum, forbidden NI lines 2=4768
 surface migration on W 0=7838
 surface potential, on W crystal faces 4=29199
 with suspended graphite in $\frac{1}{2}$ in. tube, flow, heat transfer 4=27219
 temperature of flowing gas, emission spectra study 2=1205
 test for Lennard-Jones potential 1=15847
 thermal conductivity, effect of mag. field 4=14211
 thermal conductivity, line-source technique 2=7253

Nitrogen—contd

thermal conductivity, for negligible convection 2=5201
 Townsend ionization coeffs. 3=21708
 transition probability for 1st-positive band system 2=13377
 transport properties in terms of Morse potential 4=8241
 transport props. meas., rotational relax. 4=5241
 trapping sites for excited N atoms in solid N 1=5983
 triboluminescence on bubbling through Hg 0=14698
 triton range, 0.2-2.7 MeV 3=10180
 u.s. absorpt., relaxation time 3=18857
 u.s. absorption 0=14739
 u.s. velocity and absorption, press. depend. to 5000 kg/cm² 1=6904
 u.v. radiation excited by electron swarm 3=10515
 u.v. spectra, in pink afterglow 3=22485
 ultrasonic absorption, relaxation time 4=5245
 vacuum pumping, ion, mechanism 3=23946
 vacuum rotary feed through for liquid N 4=27238
 vapour pressure of isotopic liquid 0=2168
 vapour pressures, 21.2-26.4°K 0=16738
 viscosity, calc., Enskog's dense gas theory and Kirkwood's radial distrib. function 4=14208
 viscosity when compressed to 5000 bars 3=14190
 viscosity meas. 0=16723
 viscosity meas., oscillating disk method 3=14189
 viscosity, at 127 atm. and low temps. 3=14191
 viscosity of pure gas and He-mixture, meas. to 1000°C and 600 kg/cm² 4=24265
 Z-pinch discharge 2=19966
 in Cr, effect on brittle-ductile transition 4=23134
 in Cr, effect on ductile-brittle fracture temp. 4=30770
 H_2 diffusion in 1=12919
 and H_2 mixture, convection and thermal diffusion 3=19047
 He ions in, electron capture and loss, 200-1500 keV 2=162, 22169
 N atom conc., quantitative meas. by e.s.r. 4=23687
 H_2^+ dissociation in, 200-1200 keV 1=16266
 N ions in N_2 , low-energy, drift velocity 4=24591
 N oxides trapped in doped X-ray irradi. K halides, e.s.r. 1=14350
 α -N, solid, crystal structure 1=20529
 N, transition probabilities, from Hartree-Fock-Slater wave-functions 4=12370
 N⁻ formation, by N⁺ bombard., in gas targets 0=10877
 N, N_2 ionization by electron impact, with fast crossed-beam 4=24589
 N and N_2 ions, bombard. metals, secondary electron emission 4=8822
 N and N_2 spectra, excited by 200 keV protons 1=13944
 N and N⁺ in lightning stroke near peak temp. 4=23765
 N V spectrum from SCEPTRE III plasma machine 1=13945
 N⁻ spectrum, shock excited 4=21455
 N⁺, atm. distrib., 130-430 km 4=26839
 N⁺-N collisions, charge-exchange and diffusion cross-sections, and interaction energies 4=22438
 N⁺, N_2^+ , incident on Cu and Al, momentum accommodation above sputtering threshold 4=19123
 N⁺ and N_2^+ ions, 5-25 keV, sputtering of Cu 1=8363
 N⁺ and N⁺, structure, effect on electron emission production 1=16391
 N^{+,2+,3+}, spectral presence from multiply-charged source 4=27584
 N III lines in planetary nebulae 0=18843
 N VII, h.f.s. transition in ground state 4=2462
 N_2 , absorption band systems, forbidden, in vac.-u.v. region 4=22364
 N_2 , acoustic wave propag., by localized r.f. break-down 4=19019
 N_2 , active, reaction with H_2S , NS radical obs. 2=20818
 N_2 , active, reaction with methylene chloride, quenching by CH_2Cl_2 3=11344
 N_2 adsorbed in mass spectrometers, ionization by charge transfer 3=24212
 N_2 afterglow in vacuum region 1=6021
 N_2 arc, free-burning, voltage gradient 3=4072
 N_2 band spectra 3=10503
 N_2 band spectra, intensity measurements 1=14010
 N_2 band spectrum in N-hydrocarbon reactions 2=12961
 N_2 bands in glow discharge, effect of CO 0=5994
 N_2 boiling point, detm. 3=9659

Nitrogen—contd

- N_2 breakdown formative time lags in pressurized spark gap 4=18759
 N_2 , catalysed dissociation in microwave discharge 4=11553
 N_2 charge transfer in Ar, at thermal energies, meas. 4=24555
 N_2 -chlorinated hydrocarbon reaction, light emission by product 1=20731
 N_2 , chemisorption on W ribbon 1=1479
 N_2 , collision cross-sections for two transitions 4=12462
 N_2 collisional detachment cross-sect. of O^- and O_2^- 4=27492
 N_2 , collision with Hg, rel. to Hg reson. fluoresc. quenching 4=22304
 N_2 condensation on cooled surf., rel. to vacuum production 4=8259
 N_2 , Corona, positive burst charge formation, theory 3=372
 α - and β - N_2 , crystal lattice structure 4=26662
 N_2 crystals, librational motion 3=745
 N_2 , diamagnetism calc. 1=4944
 N_2 diffusion in CCl_4 4=18189
 N_2 , diffusion in other gases, in elec. field 1=15949
 N_2 discharge rel. to air corona 3=4046
 N_2 dissociation, catalyzed, in microwave discharges 4=27496
 N_2 , double- ζ SCF-MO calc. 1=19655
 N_2 , elec. arc., temp. distrib. 2=7586
 N_2 , electroluminescence of Al_2O_3 : Cr after firing 2=4191
 N_2 electron avalanche components, temporal growth meas. 3=4086
 N_2 electron avalanche pulses, pd=100 to 2200 mm Hg 3=4085
 N_2 electron interchange with H atom beam 2=14182
 N_2 electron interchange with H atom beam 3=6342
 N_2 electron photoemission, retarding potential meas. 4=16435
 N_2 electron scatt. energy loss 2=22950
 N_2 , electronic structure 4=22363
 N_2 , electronic transition moment, variations 2=20811
 N_2 electrons, low-energy, drift velocity 4=27479
 N_2 emission spectrum, 900-1130 Å 4=17287
 N_2 , excitation by Ar, metastable, in plasma stream 3=8263
 N_2 , excitation, from electron swarm energy distrib. 3=6391
 N_2 , excitation function, slow-electron collisions 2=18424
 N_2 , excited states, lifetime meas. 4=28197
 N_2 far u.v. spectrum, high-dispersion absorption 3=10513
 N_2 , first positive band spectrum 2=3703
 N_2 , flash discharge, 1250-1340 Å, radiative intensity 2=11629
 N_2 gas, e.s.r. and after glow at $\lambda = 10$ cm 2=1211
 N_2 gas ionization by H atoms and protons, 10-180 keV 2=13540
 N_2 gas, ionization by H^- and O^- ions 1=4558
 N_2 gas, Joule-Thompson zero press. coeff., exptl. and theoret. 4=27208
 N_2 gas, second virial coeff. estimation 2=11414
 N_2 gas, u.s. vel. meas., 3.5 Mc/s at 3500 atm 3=1728
 N_2 gas, u.s. velocity meas., 3.5 Mc/s at 3500 atm., rel. to compressibility and specific heats 2=21946
 N_2 glow discharge, positive column electron and gas temp. 1=16284
 N_2 glow discharge, presence of N atoms 4=14595
 N_2 high-temp., kinetic and transport parameters 1=18466
 N_2 , intensity in upper atmosphere 2=6930
 N_2 , interaction potential with CO_2 2=6235
 N_2 , ionization by electrons 2=22175
 N_2 , ionization and excitation in clean-up of vacuum systems 1=15984
 N_2 , ionization and excitation by H^+ , H_3^+ and H_3^+ ions 1=2311
 N_2 ionization by fast He atoms and He^+ ions 4=24566
 N_2 , ionization by 5.3 MeV α -particles 1=18760
 N_2 , ionization by ions of 200-1200 keV energies 4=27488
 N_2 , ionization by protons and He nuclei 2=5304
 N_2 , ionization by protons, 0.15-1.1 MeV 3=4006
 N_2 , ion-pair formation, by 100-300 kV X-rays 2=7560
 N_2 magnetoplasma, microwave gyro-interaction 4=18879
 N_2 liquid, reaction with dissolved O_3 , rel. to u.v. photolysis 3=3408
 N_2 metastable molecule collisions in weak discharge afterglows 4=24613
 N_2 -methane mixture discharge current rise due to single electron 4=5578

Nitrogen—contd

- N_2 in methanol; u.v. absorption spectra 2=5020
 N_2 on Mo, chemisorption electron microscope study, calc. 4=29195
 N_2 mol., excitation function due to electrons 2=16515
 N_2 mol., resonance scatt. of electrons 2=22948
 N_2 , molec. bond length by neutron diffraction 2=22960
 N_2 molecular fast beam, apparatus, 5-1000 eV 1=17383
 N_2 , molecular interaction with SO_2 2=14340
 N_2 molecule, diamagnetic susceptibility, theory 3=8240-1
 N_2 molecule, electron potential energy curves 4=9720
 N_2 molecule, electron scattering resonances 4=25566
 N_2 molecules, electronic transition moments, 4000° to 9000°K 4=9700
 N_2 molecule, quadrupole moment, from pressure-induced rotat. spectrum 4=9717
 N_2 molecules, vibrationally excited, calorimeter study 3=12824
 N_2 , N_2^+ band excitation, by electrons, secondary effects 4=25655
 N_2 and NH excitation in discharge 2=20815
 N_2 and N_2^+ molecules, far-u.v. spectra 2=14284
 N_2 (or $N_2 + H_2$) mixtures with organic substs., luminescence 1=15961
 N_2 (1+) band system excitation mechanism in shock-heated N_2 4=25656
 N_2 , photoionization and absorption at 600-1000 Å 4=25662
 N_2 , photo-ionization study of energy structure 2=3730
 N_2 , point-to-plane discharges 2=9545
 N_2 positive ion production, by energetic He^+ impact 4=24569
 N_2 , possible occurrence in atmosphere 0=10400, 16422-4
 N_2 plasma, vortex stabilized arc, spectral emission, narrow-band distrib. 4=18843
 N_2 , predissociation, inverse 4=20119
 N_2 , r.f. discharge, afterglow intensity 2=15898
 N_2 with rare gases, binary mixtures, conductivity and Eucken type correction 1=248
 N_2 , refractivity, dispersion, rotativity 2=13342
 N_2 , relaxation time temp. dependence 2=3726
 N_2 , rotational excitation and momentum transfer cross-sections 2=20885
 N_2 , $^5\Sigma_g^+$ state 2=20813
 N_2 shocks, Kramer's and line radiation 4=19943
 N_2 , sorption by Ba films 2=846
 N_2 spectra, afterglow, rel. to atmos. spectra 2=15252
 N_2 , spectrum, weaker systems 4=28195
 N_2 , supersonic, nozzle flows, vibrational nonequil., spectroscopic studies 4=18232
 N_2 , thermal conductivity, theory and expt. 4=21182
 N_2 -thermal electron collision cross-sections 3=22462
 N_2 , thermodynamic and partition functions 4=28177
 N_2 , in upper atmosphere at 400 km 2=19246
 N_2 , vapour pressure above boiling point 2=13490
 N_2 , vibrational energy exchange with CO 3=20031
 N_2 , vibrational relaxation 2=8079
 N_2 , vibrational relaxation times 4=28181
 N_2 , viscosities, kinematic and diagrammatic, 0 to -183°C up to 150 atm. 2=5031
 N_2^+ auroral band spectra, temperature determination 1=15313
 N_2^+ efficiency curves by electron impact 1=18761
 N_2^+ , negative band system, pressure depend. 1=14046
 N_2^+ , $^2\Pi_g - A^2\Pi_u$, new emission bands 1=17320
 N_2^+ , u.v. excited, fluorescence 3=4753
 N_2^+ + water vapour, chemical reactions due to d.c. electric discharges 4=18758
 N_2 , $X^1\Sigma_g^+ - A^3\Sigma_g^+$ excitation energy 4=28196
 N_2^+ auroral emission, dawn enhancement 0=6473
 N_2^+ bands in sunlit auroral rays 0=6472
 N_2^+ , $D^2\Pi_g - A^2\Pi_u$ bands, vibr. assignment 4=3864
 N_2^+ + He, charge exchange cross-section, matrix calc. 4=29871
 N_2^+ ion bombardment of Cu single crystal 4=27565
 N_2 Morse wave function 0=15686
 $N_2^{0,+}$, 2nd positive system, Einstein A coeff., oscillator and abs. band strengths 3=22546
 N_2^+ , N_2 charge transfer cross-sect. measurements, rel. to ion beam excitation 4=24590
ions, $N_2^+ \rightarrow N^+ + N$ in neutral N_2 2=22176
ions, N_2^+ , N^+ , N_2^{2+} ions, prod. in atmosphere 2=19241
 N_2^+ + N_2O reaction at -196°C 2=10972
 N_2^+ band spectra 3=10503

Nitrogen—contd

- N_2^+ , first negative band intensity behind shock waves rel. to pres. 3=4756
 N_2^+ , formation in presence of He 3=10514
 N_2^+ , negative-band emission, excit. functions 0=15703
 N_2^+ negative-band system, excitation functions 0=15725
 N_2 + 1% Ti in elec. arc, diffusion processes 2=5319
 N_2^+ , oscillator strengths from arc spectrosc. meas. 4=20054
 N^+ photodissociation cross-sect. 4=25751
 N_2^+ , potential curve of $B^2\Sigma_u^+$ state 0=489
 N_2^+ , spectra 3=4755
 N_2^+ gas, single-charge-transfer reactions, cross-sects. 4=8627
 N_3^- , absorption spectrum in solution 3=21377
 N_3^- , SCF wave-functions 3=25110
 N_2^+ and N_3^+ ions, drift velocity 4=14578
 N_2^+ , formation and stability 3=4004
 N^{14} in betaine hydrochloride, e. s. r. 4=13308
 N^{14} , hyperfine structure by electron paramagnetic resonance 3=6353
 N^{14} ions, energy loss in Ni, O_2 and nuclear emulsions 0=17051
 $(N^{14} N^{15})^{2+}$, ionization potential 4=2945
 N_2^{14} and N_2^{15} , caloric props. compared 0=1562
 N_2^{14} quadrupole resonance in β quinol clathrates 0=11961
 N^{15} enrichment by exchange of NO with N_2O_3 0=11497
 N^{15} n. m. r. in N cpds, rel. to molec. structure 4=30479
 N^{18-21} , predicted new isotopes 0=13396
N-A, condensed phase diagram 0=8845
 N_2 -A discharge, second kind collisions 0=1523
 N_2 -A gas mixtures, behaviour of low-energy electrons 1=11911
 N_2 -A mixtures, columnar recombination luminescence 2=9320
 N_2 -A and N_2 - CH_4 liq. solns., surface tension 2=1125
 N_2 -A, N_2 -Xe, N_2 -He mutual diffusion 2=5051
 N_2 - C_2H_4 , unlike molecular interactions 0=15786
 N_2 - CH_2Cl_2 reaction 2=4537
N-CO and N-acetylene mixtures condensed from elec. discharge prods., emission spectra 2=10251
 N_2 - CO_2 mixture, thermal diffusion 2=19612
 N_2 - CO_2 mixture, viscosity, pressure depend. 0=8676
 N_2 - CO_2 mixtures, thermal cond., line-source technique 2=7253
 N_2 - CO_2 mixtures, viscosity rel. to thermal conductivity 1=10525
 N_2 - CO_2 phase equilibria 0=8709
N-Cs atomic system, excitation transfer and maser use 2=22901
 NH_4 uranyl sulphate, fluorescence spectra 1=14638
 N_2 + H_2 , elec. discharge, spectr. study 3=4762
 N_2 - H_2 gaseous mixtures, n.m.r. rel. to pressure 3=21451
 N_2 -H mixtures, compressibility and 2nd virial coeff. 3=14192
 NI , i.r. spectrum new lines 2=3703
 N_2 -N, existence in solid state, discharge product 0=4419
 N_2 - N_2 ionization collisions meas. 3=4015
N-N and N-O interactions, Morse potl. parameters 1=7447
 $N + N + Cs \rightarrow N_2 + Cs^+ + e^-$ reaction 2=151
 N_2 - H_2 binary mixtures, thermal cond., expt. and theoretical 2=11425
 N_2 -methane system, solid-liquid equil. 2=9461
 N_2 and N_2 - O_2 mixtures, breakdown in wire-plane and point-plane gaps 4=18748
 N_2 - NH_3 - H_2 , gas-liquid phase equil. 0=14639
 N_2 - O_2 gas mixture, exo-electron emission by liquid Al 0=15049
 N_2 - O_2 mixed discharge, gas-ionizing radiation 2=7570
 N_2 - O_2 mixture, electron irradiation effects 0=4729
 N_2 - O_2 mixtures, pulsed discharges 2=5301
 N_2 - O_2 at 77°K, liquid, excess thermodynamic properties 1=8109
 N_2 - O_2 - CO_2 phase equilibria 0=8709
 N_2 + O_2 + H_2 flames, ionization 0=19616
 N^{14} in pyridine, electronic environment 2=3687
on Ni surfaces 2=8894
O + N atomic mixtures, chemiluminescence 4=29217
in UO_2 fuel elements, release at high temp. 4=12323

Nitrogen compounds

- ADP (ammonium dihydrogen phosphate), photoelectric consts. 1=12483
ADP, birefringence 4=17549

Nitrogen compounds—contd

- ADP, double refraction axis meas. using a. c. field 4=17552
ADP, refractive index, 2000Å to 1.5 μ , meas. 4=30676
ammonium dihydrogen phosphate elastic props. 2=16949, 18987
ammonium dihydrogen phosphate, electro-optical effect 1=9516
ammonium dihydrogen phosphate, i.r. band spectra 1=11377
ammonium dihydrogen phosphate, neutron irradiated, annealing by compression 4=6893
ammonium dihydrogen arsenate and phosphate, u.v. transmission 0=13686
ammonium fluoborillate, dielec. domain structure detect. 3=25401
ammonium halides, sublimation rates 3=1874
ammonium ion, weak-field n.m.r. study 1=12567
ammonium metal, in planets Uranus and Neptune 1=9255
ammonium, metallic, density, 20×10^6 atmospheres 3=21100
ammonium molybdophosphate, fission waste ion exchanger 0=4719
ammonium perchlorate—copper chromite—carbon pellets, deflagration wave at surface, initiation 4=23656
ammonium perchlorate, granular, columns, sound velocity 3=20091
ammonium salts, ferroelectric, H^1 and F^{19} spin-lattice relax. 3=23251
ammonium salts as moderators for cold neutron sources 3=6010
ammonium salts, phase coexistence and strains 0=220
ammonium salts, polymorphism, low temp. transitions 4=13477
ammonium titanil sulphite, study 0=8158
azide, aqueous solns., radiolysis 3=16181
azide soln., decomposition by γ -irrad. 2=17098
azides, photolysis of aqueous solns. 3=6922
chemical reaction $O + NO_2 = NO + O_2$, via NO_3 , isotope exchange 3=18436
clathrate, β -quinol, N_2 motion, 15°-100°K, from heat capacity 3=8284
difluorodiazine, heats of formation of isomers 3=8960
double arsenate of ammonium and thallium, dipolar absorption 1=14535
halides, rotational freedom of NH_4 ions 2=18460
heteronuclear molecules, N electro-negativity parameter, LCAO calc. 0=20682
hexamine complex salts, proton resonance 1=9073
hydrazine in H_2SO_4 , $N_2H_4^+$ e. s. r. 4=2712
hydrazine mol., internal motion 3=10509
hydrazine, N^{14} nuc. quadrupole resonance, 77° to 244°K 4=13354
hydrazine, thermal decomp. obs. by shock tubes 4=4692
hydrazoic acid, luminescence 3=12876
isotope exchange equilb. const. from i.r. spectra 1=11610
metal nitrides, surface energy, calc., NaCl type 4=13669
metalammonia solutions, electron spin relaxation and diffusion 3=21414
metallic nitrides, lattice energies, calc. 0=13483
molecular refractivities 3=15332
nitrate crystals, chemical radiation damage 2=17099
nitrate ions in solid alkali halides, i.r. absorption 1=7714
nitrate solutions, aq., radiolysis 2=4560
nitrates, binary mixtures, liquidus curves 3=21618-20
nitrates, double, electron spin resonance 0=3124
nitrates, fused, conductivity, d. c. meas. 4=24231
nitrates, fused, electrolysis, diffusion and viscosity 1=15199
nitrates, inorg., lattice frequ. and rotational barriers 3=746
nitrates, metallic, aq. soln., u.s. vels., compressibilities 4=175
nitrates of metals, Raman spectral study of ionic interactions in aq. solns. 4=2687
nitrates of metals, solns., u.s. parameters 4=176
nitrates, nitrites, melting, atomic structure changes, from u. v. spectrum 4=5451
nitrates, nitrites, phase transformations, crystal, from u. v. spectrum 4=7509
nitric acid, molar sound velocity 0=19133
nitric oxide, absorption spectrum, visible and u.v. 0=1533

Nitrogen compounds—contd

- nitric oxide, plasma properties, 1000-30 000°K,
1-30 atm 1=10700
nitrites, double and complex, i.r. vibr. spectra, NO₂
structure 4=15351
nitro group, mag. anisotropy study 3=12856
nitromide, microwave spectra 4=1278
oxides, reaction with Xe fluorides, rates 4=23630
partition function ratios for molecules containing N
isotopes 0=20712
peroxide, in planetary atmospheres 2=13111
quaternary ammonium salts 0=3255
spectra of glow discharges in nitrogen mixtures and
ammonia 0=1520
thiocyanate complexes, vibn. spectrum, structure 3=3012
Tutton's salts, water of cryst., proton-proton
vector orientations 4=10450
NH₄ alum, reagent grade, purification 3=1265
NH₄ bifluoride, NH₄ electron distribution 1=20547
NH₄ chrome alum, paramag. resonance, elec. field
effects, 4-300°K 1=5071
NH₄ dihydrogen phosphate (ADP), electro-optical effect,
applications 0=20973
NH₄ dihydrogen phosphate, relaxation in extreme
i.r. 3=17942
NH₄ fluoroberyllate, birefringence, temp. depend. 3=17981
NH₄ halide phosphors, crystal structure and
luminescence 3=23100
NH₄ halide phosphors, Tl⁺, Sn²⁺ activated 3=946
NH₄ halides bonded with ammonia, structure 1=20555
NH₄ halides, lattice vibrations by neutron scatt. 3=750
NH₄ halides, phase transitions 1=9099
NH₄ halides, proton motion study, by slow-neutron
cross-sections 1=2308
NH₄ radical, stability 4=9785
NH₄ nickel cyanide clathrates, proton resonance 2=23003
NH₄ oxamate, electron density in C-C bonds 4=4595
NH₄ salts, diamagnetic polar; additivity
relationships 1=20047
NH₄ salts, molecular rotation 2=8075
NH₄ salts, proton motion, neutron scatt. study 2=6249
NH₄ tartrate, optical rotation, effect of irradiation by
2 MeV electrons 1=11355
NH₄ thiocyanate, isomerization, entropy prod. 0=14098
N₂H₄, spectrum meas. 3=4762
NH₄⁺, mol. polarizability, orbital calc. 4=3870
NH₄⁺, double resonance of N¹⁴ and N¹⁵ 2=2022
NH₄⁺, electronic structure, Hartree-Fock approx. 3=10534
NH₄⁺ ions in NH₄ halide crystals, i.r. spectra 2=8095
NH₄⁺, molecule, SCF MO one-centre basis set 4=20047
NH₄⁺ reaction in aq. acid, proton transfer study by
n.m.r. 0=14117
NH₄BF₄, aq. soln., X-ray analysis 4=21100
NH₄B₃O₆·4H₂O, heat capacity meas. from 15° to 370°K,
thermodynamic functions calc. 4=30517
NH₄BeF₃, crystal structure, atomic 3=20847
(NH₄)₂BeF₄, F¹⁹ magnetic resonance 2=4284
(NH₄)₂BeF₄, F¹⁹ magnetic resonance 3=3194
(NH₄)₂BeF₄, ferroelec. phase transition 3=17941
(NH₄)₂BeF₄, ferroelectric phase transition and other
props. 2=14916-17
(NH₄)₂BeF₄, ferroelectric phase transition,
thermodynamics 3=15621
(NH₄)₂BeF₄, lattice superlattice structure 3=16082
(NH₄)₂BeF₄, n.m.r. and i.r. study 0=11957
(NH₄)₂BeF₄, nuclear spin-lattice relax. and ferroelec.
transition 2=10711
(NH₄)₂(BeF₄)_x(SO₄)_{1-x}, ferroelectric, n.m.r. temp.
depend. 1=11496
NH₄Br, antiferroelectricity 2=6526
NH₄Br, Br n.m.r. 2=10720
NH₄Br, crystal structure and thermal expansion 1=19724
NH₄Br, modifications II and III, X-ray meas. 4=23419
NH₄Br, H atom positions, electron diffraction
determ. 4=30845
NH₄Br, I ⇌ II transition, dilatometric investigation 0=16335
NH₄Br, proton mag. res. 2=10719
NH₄Br, re-orientation rel. to unidimensional
abrasion 2=19034
NH₄Br transition energy at 137.2°C, differential calori-
metric meas. 0=16334
NH₄Br-TeBr system, crystal growth, reflection and
luminescent spectra 0=13714

Nitrogen compounds—contd

- NH₄Br:Ti, luminescence decay, u.v. excited 2=23598
NH₄CN, in-plane vibrations 3=22570
(NH₄)₂Cd₂(SO₄)₃ Mn²⁺ e.s.r. 2=12813
(NH₄)₃(Cd)₂(SO₄)₃: Mn²⁺, e.s.r., temp. depend. 3=5043
(NH₄)₂Cd₂(SO₄)₃, thermal props. 2=16604
NH₃ lines in Jupiter's atmos., anomalous
inclination 3=11515
NH₃, liq., slow neutron scatt. 3=14140
NH₃ liq., structure, X-ray diffraction determ. 4=24168
NH₃, liquid, dilute Na sol., photocond. 2=2731
NH₃, liquid, eqn. of state and thermodynamic
props. 2=2707
NH₃, liquid, heat of solution of alkali metals 2=2715
NH₃ liquid, molar volumes of salt and metals in
solution 2=2714
NH₃ (liquid), proton spin-lattice relaxation, temp.
depend. 1=9409
NH₃ liquid, reaction with alkali metals, kinetics 2=2447
NH₃ liquid, self-diffusion 1=15855
NH₃ liquid, self diffusion 4=14155
NH₃ liquid, slow neutron scattering 0=15360
NH₃ liquid and vapour, density, temp. var. 1=15836
NH₃ liquid, viscosity meas. 4=14147
NH₃ liquid, thermal neutron diffusion
coefft. 4=21865
NH₃, magnetic h.f.s. of r.f. spectrum 1=14020
NH₃ maser, cascaded-cavity type 0=19923
NH₃ maser, design and operation 1=16554
NH₃ maser, mag. coupling const. and inversion
state 2=1586
NH₃ maser, magnetic perturbation of oscillator
line 2=1585
NH₃ maser oscillator, as far i.r. stimulated emission
detector 4=19253
NH₃ maser, Zeeman effect obs. 3=12354
NH₃, mean vibration amplitudes 1=14000
NH₃-metal solutions, electron spin relaxation and
electron diffusion 2=17488
NH₃-metal solutions salt effect 2=1142
NH₃, microwave line breadths 1=6006
NH₃ mol. beam, resonance radiation 3=6443
NH₃ mol. beams, directivity pattern 3=22615
NH₃, molec. orbital estimate of indirect p-p spin
coupling 0=7804
NH₃, molecular beam focusing 0=7826
NH₃, molecular-beam maser 0=5396
NH₃ molecular beam, resonance radiation 2=16571
NH₃ molecular beam, scattering cross-section with
H₂O 2=23018
NH₃, molecular force constants, crystalline, gaseous,
liquid 3=22566
NH₃, molecular nuclear coupling 1=17356
NH₃, molecular rotation in solid A and N 1=6010
NH₃ molecule, electron radial distrib. 2=12307
NH₃ molecule, far-u.v. spectrum 2=14284
NH₃ molecule, polarization, calc. 2=8074
NH₃, molecule, SCF MO one-centre basis set 4=20047
NH₃ molecule, X-ray and electron diffraction 3=8220
NH₃, molecules, electronic structure, by diffr., electrons,
X-rays 4=1271
NH₃ molecules, electron-density distributions 3=17587
NH₃ mols., scattered X-rays and electrons, intensities
calc. using two methods 4=6522
NH₃ mols, Urey-Bradley force field 3=12799
NH₃, ND₃ molecules, inversion, potential function 2=12308
NH₃, ND₃, structure, simple and hydrated 1=20555
NH₃, ND₃, molecular props. 0=4187
NH₃, NH₃D, ND₂H and NT₂, ν_2 and inversion energy
levels 1=17327
NH₃, n.m.d.r. 4=22423
NH₃, n.m.r., J coupling theory 3=14790
NH₃, in organic exchange reaction, rates 2=4525
NH₃, 1600 Å band system 1=8845
NH₃, photoionization, continuous absorpt., and
fluorescence 4=25690
NH₃, photolysis, primary, at 1470 Å 4=23676
NH₃, photolysis in solid matrix 0=14128
NH₃, proton irradi., rel. to conc. and decomp. 4=15848
NH₃, quadratic potential function 2=1986
NH₃, quantum-mech. theory, semiempirical 3=25112
NH₃, reaction with BF₃ 1=6568
NH₃, reaction with H atoms 2=23952
NH₃, reaction rates with mixtures of (O + O₂) 4=4693

Nitrogen compounds—contd

- NH_3 , refractivity, press. depend. 0=6839

 NH_3 , solubility of some salts and vapour press. of solutions 2=15576
 NH_3 solution, in water, Raman spectrum, var. with conc. 4=14169
 NH_3 , spectra, emission, excited by protons and H atoms 3=15338
 NH_3 , spectral J = 3, K = 3 line shape, rel. to pres. and microwave power, 23.86 Gc/s 3=3837
 NH_3 , spectrum meas. 3=4762
 NH_3 stream, electronic excitation 2=8138
 NH_3 , suspended in solid N_2 , i.r. spectrum 2=4151
 NH_3 , theory intensities of i.r. spectra 0=4203
 NH_3 , u.v. absorption spectrum 2=3749
 NH_3 , Urey-Bradley force field 3=22552
 NH_3 , vacuum u.v. photolysis 2=4550
 NH_3 , vibr. relax., by u.s. velocity dispersion 3=22567
 NH_3 , vibration-rotation bands 0=4201
 NH_3^+ radical, h.f.s., mol. orbital calc. 3=15343
 NH_3 -A gas-liquid phase equilibrium 1=18673
 NH_3 -Ar mixtures, viscosity 4=18242
 NH_3 and ND_3 , crystal structure at low temps. 0=4634
 NH_3 - N_2 - H_2 and NH_3 -Kr, equil. gas-liquid phase 0=14639
 NH_3 -NO flames, excitation, ionization 0=212
 NH_3 -Ni cyanide complexes, X-ray powder patterns 3=1406
 NH_3OH salts, i.r. spectra rel. to structure 2=540
 NH_3OHCl , irradiat., Cl_2^- e.s.r. 4=28869
 NH_3OHCl , Raman spectrum 4=26199
NH band spectrum in N-hydrocarbon reaction 2=12961
NH, electronic structure 0=7774-5
NH-metal solutions, paramagnetic resonance 2=1167
NH, NH_2 radicals, lower electron states theory 2=12336
NH radical, emission spectrum, rel. to shock wave in N_2 - H_2 systems 4=17320
NH radical, low-temp. i.r. study of chemistry 4=25757
NH, spectra in solid A, Kr, Xe 0=20661
NH, spectrum, (1, 0) band, rotational anal. 0=15699
 NH_2^- , charge transfer to SO_2 and CS_2 2=11616
 NH_2 free radical, hyperfine e.s.r. spectrum 4=6658
 NH_2 free radical, in Mrkos comet spectrum 2=13116
 NH_2 radical, electronic absorption spectra 0=4214
 NH_2 radical, H¹ and N¹⁴ coupling, orbital theory 2=3767
 NH_2 radical, spin polarization effects 3=22568
 NH_3 recombination in decomposition of NH_3 3=8308
 $[(\text{NH}_4)_2\text{CS}]_n\text{NiCl}_2$, crystal spectrum and magnetism 4=13064
 NH_2D , microwave spectrum, hyperfine structure 4=28206
 NH_2D molec. orbital estimate of indirect p-d spin coupling 0=7804
 NH_2D and ND_2H , spectroscopy in mm region 4=12479
 NH_2 - $\text{NH}_3^+\text{BF}_4^-$, crystal struct. by Weissenberg camera 4=29113
 NH_2NH_2 : N_2 system, i.r. spectrum, matrix isolation 3=15346
 NH_2OH and $\text{NH}_2\text{OH-d}_3$, freqs., from force consts. 3=4760
 $\text{NH}_2\text{SO}_3\text{H}$ (sulphamic acid), crystal structure 0=8228
 NH_3 , absorbate on glass, dielectric properties 1=20678
 NH_3 , activation energies of synthesis 2=15138
 NH_3 , adsorpt. on Vycor glass, i.r. study 4=20817
 NH_3 , adsorption on glass, i.r. studies 2=6858
 NH_3 , absorption spectra, 1440-1840 cm⁻¹ and 510-1280 cm⁻¹ 0=5934
 NH_3 , absorption spectra, 1850 to 4000 Å 4=11249
 NH_3 , adsorbed on porous Vycor glass, dielectric absorpt., 23.5 Mc/s 4=17293
 NH_3 , adsorption on carbon, enhancement of nuclear polarization 0=16717
 NH_3 , in atmosphere. 3=25870
 NH_3 , band in Jovian spectrum 4=23894
 NH_3 beam maser, characteristics 3=12352
 NH_3 beam maser as freq. standard 2=20141
 NH_3 beam maser, oscill. freq. meas. 3=12353

Nitrogen compounds—contd

Nuclear bombardment targets

- (Heading introduced in 1964)
 calorimetric, for fast-particle beams 4=8853
 chamber for precision ang. distrib. meas. 4=30100
 gas, pressure measurement and regulation 4=14192
 high m. p. materials, electron bombardment evaporator 4=27712
 low evaporation, for liq. H $_2$, D $_2$, He 4=30101
 metallic foils, 0.1-10 μ , preparation 4=16715
 for n prod., by D(d, n) or T(d, n), use of rare earth cpds. at high temps. 4=21855
 neutron yield, proton bombardment of U, Pb, Al, D $_2$ O targets 4=15061
 particle accelerators, cooling device 4=30102
 polarization meas., dynamic, by n. m. r. 4=19323
 polarized, for resonance spins and parities meas. 4=21813

Nuclear bombardment targets—contd

- preparation by electrolytic deposition 4=17865
 production, cryogenic system 4=19322
 thickness measurement 4=16718
 vapour jet 4=3232
 CIF as mol. crystal thin film, for p scatt. and F 19 2nd excited state elec. moment meas. 4=25297
 Cr, preparation from Cr $_2$ O $_3$ 4=16716
 Cu foils, isotopic, preparation 4=24933
 D or T for neutron production, construction 4=16714
 D-Ti, cooling system 4=9004
 D $_2$, liquid 4=9003
 H $_2$ and N $_2$ liquid, level indicator 4=14474
 Li, thickness, meas., from Li 17 (p, n)Be 7 flight-time 4=27713
 Li 6,7 fragment production, p bombard. 4=17130
 O 17 preparation, improved technique 4=30099
 T-Ti, cooling system 4=9004
 T-gas, use as neutron source by T(p, n)He 3 reaction 4=24934
 Ti-T, used in neutron accelerators, efficiency 4=19523
 V, deuteron bombardment, O, C and Hg impurity interactions, 8-10.5 MeV 4=22167
 Zr-D on Cu substrates, preparation 4=16717

Al^{25} , 450 keV level, by $\text{Mg}^{24}(\text{p}, \gamma)$ 825 keV reson. 3=22296

Al^{26} , 418 keV level, by $\text{Mg}^{25}(\text{p}, \gamma)$ 1 MeV 3=22296

Al^{27} , core excitation 4=17183

Al^{27} , giant dipole res. 2=13999

Al^{27} , 2.21 MeV level, by bremsstrahlung of 2.85 MeV electrons 3=22297

Al^{27} , by 2.76 MeV neutrons 3=15207

Al^{27} by N^{14} and O^{16} ion bomb., γ -ray emission 0=2622

As^{75} , Coulomb, by protons, α -particles 2=1007

As^{75} , multipole order of process 2=10008

Au, student experiments 2=14129

Au^{197} core, rel. to M1 and E2 transitions 2=18257

Au^{197} , Coulomb, by 11 MeV α -particles 0=3821

Au^{197} , Coulomb, internal conversion electrons 1=3425

Au^{197} , inelastic neutron scatt., Hauer-Fleshback theory 4=28039

Au^{197} Mössbauer absorption, chemical shifts, theory 1=17391

Au^{197} , Mössbauer effect, velocity half-width and lifetime of 77 keV state 0=11312

Au^{197} , by 6.7-12.6 MeV protons 1=5905

B^{10} by protons, deuterons 2=16312

B^{10} , 7.48 MeV, by e, 51, 102 MeV, orientation effects calc. 4=25290

$\text{B}^{10,11}$, by electron scattering 3=4625

B^{11} from $\text{C}^{12}(\text{p}, 2\text{p})$ and $\text{C}^{12}(\pi, \text{n})$ reactions 2=14121

B^{11} from $\text{C}^{12}(\text{p}, 2\text{p})$ and $\text{C}^{12}(\pi, \text{n})$ reacts. 3=6277

B^{11} , γ -ray resonant scatt. 2=1861

B^{12} , first excited level, ang. momentum 2=484

Be, by 40 MeV electrons, electron spectra 1=681

Be^7 , by He^3 - He^4 scatt. meas. 3=12522

Be^8 , α -emitting states ~ 20 MeV 3=678

Be^8 in $\text{Be}^7(\text{d}, \text{p})\text{Be}^8$ reactions 0=20456

Be^8 , giant dipole resonance 4=15143

Be^8 , intermed. nucleus in $\text{C}^{12}(\alpha, 4\alpha)$ reaction 3=2495

$\text{Be}^{8,9,10}$, in Li^7 reactions with α -rays 4=3703

Be^9 , by α -rays, collective rotational deform. parameter 4=12274

Be^9 (d, d'), at 27.7 MeV 2=14125

Be^9 , by electron scatt. 0=13255

Be^9 , by electron scatt., E1, E2 transitions 3=12580

Be^9 , by electron scattering 3=4625

Be^9 , by 14.1 MeV neutrons 1=17118

$\text{Be}^9(\text{p}, \text{p}')$, 5-15 MeV, cross sections and ang. distrib. 4=25386

Be^9 , by 17-49 MeV electrons 3=4628

Bi^{209} , by α inelastic scattering, 27.25 MeV 4=3584

Bi^{209} , by α -rays, γ -rays meas. 2=8009

Bi^{209} , giant dipole res. 2=13999

Bi^{209} , inelastic neutron scatt., Hauer-Fleshback theory 4=28039

Bi^{209} , by 183 MeV electrons 1=10965

Bi^{209} , by 183-600 MeV electrons 3=10333

$\text{Br}^{79,81}$, 10-24 MeV α -induced, excitation functions 4=25436

C, absorption of γ -rays 0=11431

C, by C^{12} , excitation curve, possible formation of Mg^{24} high-spin states 0=9648

C, by deuterons 1=3455

C, dipole giant resonance, by inelastic electron scatt. 3=15181

C, by electron scatt., inelastic, at 42.6 MeV 0=449

C, by 14 MeV neutron scatt. 1=13806

C, by 14 MeV neutrons, $\text{n}^1-\gamma$ ang. correl. 3=24944

C, by 40 MeV electrons, electron spectra 1=681

C, "molecular" states formed by two C nuclei 0=13251-3

C, by 200 MeV inelastically scattered electrons 4=17120

C, strong M1 transitions, for m factors 4=19760

C^{11} , selective excitation of states by $\text{C}^{12}(\text{p}, \text{d})$ 2=3571

C^{12} , by α -particles at 18 MeV 0=2668

C^{12} , by α -particles, 22-24 MeV 3=2495

C^{12} , deformed, giant E1 resonance, calc. 2=1798

Nuclear excitation—contd

- C^{12} , dipole, by proton inelastic scatt. at 156 MeV, impulse approx. 1=8721
 C^{12} , double E1 de-excitation 1=2187
 C^{12} , by 18-30 MeV proton scatt. 4=6330
 C^{12} , by electron scatt. 0=13255
 C^{12} , by electron scatt., particle-hole correl. 4=12209
 C^{12} , by electron scattering 3=4625
 C^{12} , by electrons, 15.1, 16.1 MeV levels 2=431
 C^{12} , by electrons, meas. 4=15199
 C^{12} , 7.6 MeV level, by 14 MeV neutrons 2=12133
 C^{12} , 4.43 MeV level, by protons of about 100 MeV 0=9353
 C^{12} , 15.1 MeV level, by photons 3=24919
 C^{12} , 15.1 MeV level, by proton scatt. at 150 MeV 2=438
 C^{12} , 15.1 MeV level in p, p' γ reaction 2=439
 C^{12} , 15.11 MeV level, by e scatt., var. inelastic momentum transfer 4=25381
 C^{12} , by 5-6 MeV proton scatt. 4=6331
 C^{12} , 4.43, 7.66, 9.6 and 10.1 MeV levels 4=17145
 C^{12} , γ -ray, resonance at ~ 20 MeV 0=11433
 C^{12} , γ -ray resonant scatt. 2=1861
 C^{12} , giant dipole res. 2=13999
 C^{12} , giant dipole resonance, exptl. determ. rel. to shell model calc. 4=15143
 C^{12} , giant double resonance, e.m. structure 4=12128
 C^{12} , giant resonance, by 40-70 MeV electrons 4=19672
 C^{12} , by inelastic electron scatt., calc. 3=24858
 C^{12} , by inelastic scattering of deuterons 0=7572
 C^{12} , by inelastic scattering of 28.5 MeV He^3 0=20463
 C^{12} , magnetic-dipole form factors for electron scatt. 4=19759
 C^{12} , by N^{14} inelastic scatt. at 27.3 MeV 1=732
 C^{12} , by neutron scattering 3=12685
 C^{12} , 9.64 MeV, by p, with subsequent α decay 4=22134
 C^{12} , by 127 MeV C^{12} scattering 2=16438
 C^{12} , by 180 MeV protons, calc. 2=16402
 C^{12} , by 182 MeV protons, impulse approx. 3=15184
 $C^{12}(p, p'\gamma)C^{12}$ 1=5906
 C^{12} , particle-hole model, two-body forces 4=15145
 C^{12} , by proton inelastic scatt. at 150 MeV, high-energy γ -rays 1=8723
 C^{12} , by proton scatt., diff. cross-section, calc. 1=3442
 C^{12} , by protons, at 185 MeV, 4.4 MeV level as collective state 0=11409
 C^{12} , by 6 - 19 MeV α -rays, γ -rays analysis 4=12279
 C^{12} , 7.6 MeV level, by 14 MeV neutrons 2=12133
 C^{12} , 7.65 MeV level, by 14 MeV neutrons 3=15206
 C^{12} , 7.656 MeV level, by $Be^9 + \alpha$, nuclear pair emission 0=405, 9573
 C^{12} , 7.66 MeV state, decay 0=17609
 C^{12} , by 660 MeV protons 3=4630
 C^{12} , by 20-23 MeV α -rays, energy depend. 4=25435
 C^{12} , 2^+ level, in p scatt., effect on polarization, calc. 4=17131
 $C^{12}-C^{12}$ inelastic scatt., meas. and theory 2=5972
 $C^{12}-C^{12}$ inelastic scatt., 128 MeV 3=15101
 C^{12} to U^{238} , even-even nuclei, octupole states, systematics 2=1789
 $C^{12,13}$, by He^3 , rel. to cross-section 4=17200
 C^{13} , by deuterons, first three levels 2=486
 C^{13} , dipole state, theory 2=16318
 Ca , giant dipole res. 2=13999
 Ca^{40} , by electron scatt., particle-hole correl. 4=12209
 Ca^{40} , by electrons, giant resonance 2=433
 Ca^{40} , by 44 MeV α -rays 1=7402
 Ca^{40} , γ resonant absorption at 10.3 MeV 2=352
 Ca^{40} , giant dipole resonance 2=1864
 Ca^{40} , by inelastic α -ray scattering 2=22851
 $Ca^{40}(p, p'\gamma)$, at 150 MeV 3=10342
 Cd^{111} , excitation functions for inelastic scatt. reactions 1=688
 Cd^{111m} , by γ -rays 3=15111
 Cd^{111m} , photoexcitation cross-section 2=13984
 $Cd^{112,114}$, Coulomb, by oxygen ions 2=1819
 $Cd^{112,114}$, Coulomb excit. by 45 MeV oxygen ions 2=22740
 Cd^{114} , Coulomb excitation of 4^+ state 1=609
 Cd^{114} , neutron strength functions 4=3678
 Cd^{114} by (p, p') reaction 4=15161
 Cd^{114} , by p's, coupled channel analysis 4=22126
 Ce^{140} , by La^{140} γ -rays, resonance fluorescence 2=14072
 Ce^{140} , nuclear resonance fluorescence 0=413
 Ce^{140} , in $Pr^{140} \rightarrow Ce^{140}$ decay 0=11355

Nuclear excitation—contd

- Co, by electron scatt., 300 keV-1.5 MeV 4=22148
 Co^{59} , by 183 MeV electrons 1=10965
 Co^{60} , nuclear orientation and h.f.s. coupling in Co metal 0=20786
 Cr, even-even nuclei, Coulomb excitation 2=13982
 $Cr^{50,52,54}$, by 6.9 MeV protons 3=22373
 Cr^{51} , levels up to 3 MeV 2=452
 $Cr^{51,53,54}$, γ -ray de-excitation 2=10119
 Cr^{62} , by n scatt., inelastic, 1-4 MeV, and optical model 4=17042
 Cr^{52} , nuclear resonance fluorescence 0=413
 Cr^{62} , by 17.45 MeV protons 4=15204
 Cr^{54} , Coulomb excitation with N, O, Ne ions 1=2243
 Cu, by deuterons 1=3455
 Cu, by electron scatt., 300 keV-1.5 MeV 4=22148
 Cu^{59} , total radiation widths, distrib. 0=437
 Cu^{63} , α -particle excitation 1=7403
 Cu^{63} , by 183-600 MeV electrons 3=10333
 Cu^{63} , resonance fluorescence, sources in Cu metal and aq. soln., lifetimes of excited states 1=611
 $Cu^{63,65}$, Coulomb, by 4-8 MeV α -rays 4=17055
 $Cu^{63,65}$, single-phonon quadruplet, by inelastic d-scatt. 4=25422
 Cu^{65} , α -particle excitation 1=7403
 Cu^{65} , 1.114 MeV level, nuclear resonance fluorescence 4=25309
 $Dy^{166,168}$, deformation parameters 3=15282
 $Dy^{160,162,164}$, deformed, Coulomb excit. of vibrational states 4=22040
 $Dy^{161,163}$, Coulomb, conversion electrons 0=15551
 Dy^{162} , by O ions, double Coulomb effect 3=8134
 $Dy^{164,166,168,170}$, deformed, Coulomb excit. of vibrational states 4=22040
 Er^{166} , first excited state, transition probs. 2=13986
 Er^{167} , Coulomb 4=1025
 Er^{170} , by O ions, double Coulomb effect 3=8134
 $Eu^{147,149,151}$, I -forbiddenness rel. to collective motion 2=13989
 $Eu^{147,149,151}$, I -forbiddenness rel. to collective motion 3=6175
 Eu^{153} , Coulomb, conversion electrons 0=15551
 F^{15} , by 9-11 MeV Ne^{20} ions 0=11428
 F^{18} , by $O^{16}(He^3, p)$, de-excitation of low levels 1=7323
 F^{18} , Coulomb, by $Li^{6,7}$, γ -ray yields 0=4107
 F^{19} , Coulomb, large second-order effects 4=12140
 F^{19} , E3 Coulomb 4=12139
 F^{19} , 1.35 and 1.46 MeV levels 4=12138
 $F^{19}(p, p')$, 140 MeV, mechanisms 4=25388
 F^{19} , resonance, from first excited states 3=6164
 Fe, with α -particles 0=20469
 Fe cpds., Fe^{57} Mössbauer effect, systematic study 2=10303
 Fe, by deuterons 1=3455
 Fe, by neutron inelastic scattering 1=9865
 Fe^{54} , by 17.45 MeV protons 4=15204
 Fe^{56} , first excited state, by neutron scatt., direct-interaction contrib. 1=8735
 Fe^{56} irradiated with 4.3 MeV protons 2=5902
 $Fe^{56}(n, n'\gamma)_{0.845}$ at 2.0 MeV, $n'\gamma$ ang. correl. 4=6347
 $Fe^{56,58}$, collective "2-phonon" levels, by α scatt., 44 MeV 3=24864
 Fe^{57} , α -particle excitation 1=7403
 Fe^{57} , Coulomb excitation of 136 keV level 0=17561
 Fe^{57} , Coulomb, excited-state lifetime 1=4841
 Fe^{57} , Coulomb, gamma emission without recoil 2=351
 Fe^{57} , filtered resonance radiation, time spectra 0=7464
 Fe^{57} , γ -ray resonant absorption, polarization in hyperfine spectrum 0=7463
 Fe^{57} , Mössbauer effect, effect of source-absorber temp. difference 0=17489
 Fe^{57} , Mössbauer effect in Fe cpds. and d-group metals, "isomer" shift interpretation 1=6262
 Fe^{57} , Mössbauer effect in Fe cpds., elec. quadrupole splitting and nuclear volume effect 1=6261
 Fe^{57} , Mössbauer effect, frequency distrib. of resonance line versus delay time 1=603
 Fe^{57} , Mössbauer effect, gravitational red shift meas. 0=7468-9, 10570
 Fe^{57} , Mössbauer effect, line width and intensity 0=15518
 Fe^{57} , Mössbauer effect, rel. to source velocity 0=5663
 Fe^{57} , Mössbauer effect, search for anisotropy of inertia 0=10569

Nuclear excitation—contd

Fe⁵⁷, Mössbauer effect, temp. depend. or recoil-free
 γ -ray energy 0=11313
 Fe⁵⁷, Mössbauer effect, tests of clock paradox, assessment 0=18917
 Fe⁵⁷, recoilless resonance scatt. of 14.4 keV rays, parity conservation 1=602
 Fe⁵⁷, resonance absorption and Zeeman effect 0=7465
 Fe⁵⁷, resonance radiation, polarization 0=7466
 Fe⁵⁷, resonant scatt. of 14.4 keV ray, interference with Rayleigh scatt. 1=601
 Fe⁵⁷, time dependence of γ -rays from 14.4 keV state, by delayed coincidence with 123 keV ray 0=17488
 Fe⁵⁸, Coulomb excitation with N,O,Ne ions 1=2243
 Fe⁵⁸, 2⁺ collective state, by 64.3 MeV α -rays 4=15237
 Gd^{154,156,160}, deformed, Coulomb excit. of vibrational states 4=22040
 Gd¹⁵⁶, by 17.5 MeV protons 4=6332
 Gd¹⁶⁰, by O ions, double Coulomb effect 3=8134
 Ge⁷³, Coulomb, excited-state lifetime 1=4841
 Ge⁷⁴, Coulomb, by deuteron and proton scatt. 1=4874
 Ge⁷⁴, polarization of nuclear resonance fluorescence 0=5773
 Ge^{74,76}, second 2⁺ state, by α particles 2=10141
 Ge⁷⁶, Coulomb, by deuteron and proton scatt. 1=4874
 H², photo-effect 4=9321
 He⁴, giant dipole resonance, no structure 4=15143
 He⁴, by p at 55 MeV 4=16981
 He⁵, by Li⁶(γ ,p)He⁵ 1=4856
 Hf, by proton and deuteron scatt. 1=13787
 Hf, by thermal neutrons 2=14114
 Hf¹⁷⁷, decay of 250 keV level 2=14071
 Hf¹⁸⁰, by O ions, double Coulomb effect 3=8134
 Hg¹⁹⁶, excitation functions 2=1882
 Hg^{197,197m}, relative, in nuclear reactions 4=9422
 Hg¹⁹⁶, 412 keV level, nuc. reson. fluoresc. 3=19796
 Hg¹⁹⁸, internal conversion coeff. 0=424
 Ho¹⁶⁵, Coulomb, conversion electrons 0=15551
 Ho¹⁶⁵, polarized, by 1 MeV neutrons, calc. 4=12234
 Ho¹⁶⁵, by 17.5 MeV protons 4=6332
 Ho¹⁶⁵, by 60 MeV O¹⁶ ions 3=15120
 Ho¹⁶⁶, de-excitation to 1st excited state of Er¹⁶⁶ 2=5859
 Ho¹⁶⁶, transitions between low-lying excited states 1=8648
 In¹¹⁵, excitation functions for inelastic scatt. reactions 1=688
 In¹¹⁵, by 183-600 MeV electrons 3=10333
 In^{115m}, by γ -rays 3=15111
 In^{115m}, photoexcitation cross-section 2=13984
 In¹¹⁶, activation ratios in In¹¹⁵ neutron capture 1=11026
 In¹¹⁶, by neutron capture in In¹¹⁵, depend. of activation ratio on neutron energy 0=13287
 Ir¹⁹¹, γ -ray resonance absorption 0=1368
 K⁴⁰, 52 levels, from d stripping on K³⁹ 0=441
 K⁴¹, by A⁴⁰(p, γ), 70 levels 3=7991
 Kr, dipole giant resonance, by inelastic electron scatt. 3=15181
 Li, by 28.1 MeV deuterons, meas. 4=22164
 Li⁶, by Li⁶(γ ,n)Li⁵ 1=4856
 Li⁶(d,n)Be⁷, ground and 1st excited state 3=15225
 Li⁶, by e scatt. 3=22368
 Li⁶, by 40 MeV electrons, electron spectra 1=681
 Li⁶, γ -ray resonant scatt. 2=1861
 Li⁶, M1 transitions by inelastic electron scatt. 4=12134
 Li⁶, magnetic-dipole form factors for electron scatt. 4=19759
 Li⁶, strong M1 transitions, form factors 4=19760
 Li⁶, 2.18 MeV level by neutron scatt. 2=16414
 Li^{6,7}, by electron inelastic scattering, from factors 4=17113
 Li⁷, alpha-particle scatt. 4=3703
 Li⁷, by antineutrinos, low-energy, calc. 3=17244
 Li⁷, by electron scatt. 3=19766
 Li⁷, first excited state 2=501
 Li⁷, by 9-11 MeV Ne²⁰ ions 0=11428
 Li⁷, by resonance scattering of γ -rays 1=3434
 Li^{7*}, de-excitation from Bi¹⁰(n, α)Li^{7*} 2=16207
 Lu¹⁷⁵, Coulomb, conversion electrons 0=15551
 Mg, by deuterons 1=3455
 Mg, γ -ray resonant scatt. 2=1861
 Mg, giant dipole res. 2=13999
 Li⁷, inelastic electron scatt. 3=10240
 Mg, by n scatt., inelastic, 1-4 MeV, and optical model 4=17042

Nuclear excitation—contd

Mg, by neutron inelastic scattering 1=9865
 Mg, proton-capture resonances at 490-1390 keV 0=5744
 Mg, strong M1 transitions, form factors 4=19760
 Mg, 10.15 MeV level, by photons, level width 0=17621
 Mg²⁴, Coulomb exc. of first excited stage 0=2567
 Mg²⁴, Coulomb excitation with N,O,Ne ions 1=2243
 Mg²⁴, deformed, giant El resonance calc. 2=1798
 Mg²⁴, first excited level, by 14 MeV neutrons 4=6346
 Mg²⁴, γ -ray study of levels 1=5842
 Mg²⁴, by inelastic deuteron scatt. at 19.6 MeV 1=712
 Mg²⁴, by Na²³ + p 2=3573
 Mg²⁴, 1.37 MeV level in d-scatt. 4=19812
 Mg²⁴, 1.37 MeV level, by p and d scattering 0=13235
 Mg²⁴, 1.37 MeV level, by proton scatt. 0=5745
 Mg²⁴, resonance scattering of γ -rays 0=413, 7534, 9661
 Mg²⁴, unnatural parity in α scatt. 4=28063
 Mg²⁴, unnatural parity state, by α 's, 22.5 MeV 3=15229
 Mg²⁵, γ -ray study of levels 1=5842
 Mg²⁶, γ -ray study of levels 1=5842
 Mn, by neutron inelastic scattering 1=9865
 Mn⁵⁵, Coulomb, excited-state lifetime 1=4841
 Mn⁵⁵, Coulomb, by Li^{6,7}, γ -ray yields 0=4107
 Mn⁵⁵, Coulomb, by Ne²⁰ ions 2=18267
 Mn⁵⁵, resonance, from first excited states 3=6164
 Mn⁵⁶, transitions between low-lying excited states 1=8648
 Mo⁹⁵, Coulomb, excited-state lifetime 1=4841
 N¹³, resonance in C¹²(p,p' γ) 1=2210
 N¹⁴, by electron scattering 3=4625
 N¹⁴ excited states 1=8768
 N¹⁴, γ -ray resonant scatt., lifetime of first excited state 1=664
 N¹⁴, by inelastic scatt. on C¹² at 27.3 MeV 1=732
 N¹⁴, M1 transitions by inelastic electron scatt. 4=12134
 N¹⁴, by tritons, 1-2 MeV, differential cross-sections 4=17191
 N¹⁶, giant dipole reson., by μ capture in O¹⁶ 4=17034
 Na²³, γ -ray resonant absorption 0=11311
 Na²³, by n via compound nucleus, up to 4 MeV, calc. 4=25300
 Na²³, by 9-11 MeV Ne²⁰ ions 0=11428
 Na²³, by proton bombard. 0=13206
 Na²³, proton scatt., 873 keV, interference with Coulomb excitation 4=25389
 Nb⁹² low lying levels by Nb⁹³(p,d)Nb⁹² 4=12151
 Nb⁹³, by n scatt., inelastic, 1-4 MeV, and optical model 4=17042
 Nd even-even nuclei, Coulomb excit. 2=13982
 Nd, total neutron cross-section, 3.3-5 MeV meas. 4=22158
 Nd¹⁵⁰, deformed, Coulomb excit. of vibrational states 4=22040
 Ne²⁰, Coulomb excitation with N,O,Ne ions 1=2243
 Ne²⁰, giant resonance region, by F¹⁹ + p 1=8722
 Ne²⁰, by inelastic scatt. of protons 1=19457
 Ne²⁰, by inelastic scatt. of protons 3=4632
 Ne²⁰, by inelastic scattering of 28.5 MeV He³ 0=20463
 Ne²⁰, by Na²³(p, α) and Ne + b 0=13206
 Ne²⁰(p,p' γ), 4.97 MeV level 3=10255
 Ne²⁰, unnatural parity in α scatt. 4=28063
 Ne²¹, Coulomb 2=13993
 Ne²¹, by inelastic scatt. of protons 1=19457
 Ne²¹, by inelastic scatt. of protons 3=4632
 Ne²³, Coulomb excitation with N,O,Ne ions 1=2243
 Ni, by α -particles 0=20469
 Ni, by deuterons 1=3455
 Ni⁵⁸, Coulomb excitation with N,O,Ne ions 1=2243
 Ni⁵⁸, by 183 MeV electrons 1=10965
 Ni⁵⁸, 2⁺ collective state, by 64.3 MeV α -rays 4=15237
 Ni^{58,60}, by n scatt., inelastic, 1-4 MeV, and optical model 4=17042
 Ni^{58,60}, quadrupole, form factors 3=8081
 Ni^{58,60,62}, collective, by α -particles 3=15106
 Ni^{58,60,64}, by alpha-particles, Blair model 1=13853
 Ni⁶⁰, α -particle scatt., theory rel. to expt. 2=18356
 Ni⁶⁰, Coulomb excitation with N,O,Ne ions 1=2243
 Ni⁶⁰, γ -ray resonance scatt., effect of recoil nuclei collisions 0=20338
 Ni⁶⁰, by 183 MeV electrons 1=10965
 Ni⁶⁰, two-phonon state, by 43 MeV α -particles 4=6214
 Ni⁶¹, Mössbauer effect 1=5830
 Ni⁶², Coulomb excitation with N,O,Ne ions 1=2243
 Ni⁶², neutron strength functions 4=3678

Nuclear excitation—contd

- Ni^{62,64}, collective "2-phonon" levels, by α scatt.,
44 MeV 3=24864
- Ni⁶⁴, Coulomb excitation with N,O,Ne ions 1=2243
- Ni⁶⁴, by 9.6-11.7 MeV protons 3=10259
- O, by O¹⁶, excitation curve 0=9648
- O⁺ states of even-even nuclei by β decay 3=22322
- O¹⁵*(5.20, 5.25, 6.15 MeV), by N¹⁴(d, n), n ang.
distrib. 4=6372
- O¹⁶, by α -particles at 18 MeV 0=2668
- O¹⁶, in (C¹², O¹⁶), (O¹⁶, O¹⁶) interactions 2=8010
- O¹⁶, in C¹³(α , n)O¹⁶ 2=12220
- O¹⁶, dipole states, by SU3 coupling scheme 4=12136
- O¹⁶, by electron inelastic scatt. 4=19675
- O¹⁶, by electron scatt., particle-hole correl. 4=12209
- O¹⁶, by electron scattering 3=4625
- O¹⁶, by electrons 3=19836
- O¹⁶, by electrons, giant resonance 2=432
- O¹⁶, by electrons, possible E1 overtones 3=4627
- O¹⁶, 11-14 MeV, by electron inelastic
scatt. 4=17028
- O¹⁶, energies up to 15 MeV, meas. 4=15146
- O¹⁶, (γ , n), shell model extension 4=25292
- O¹⁶, γ -ray resonance scatt. 2=1861
- O¹⁶, γ -ray, resonance at \sim 20 MeV 0=11433
- O¹⁶, giant dipole resonance 2=1865
- O¹⁶, giant dipole resonance, exptl. determ. rel. to shell
model calc. 4=15143
- O¹⁶, giant dipole state, theory 2=3473
- O¹⁶, giant resonance excitation by inelastic electron
scattering 0=20474
- O¹⁶, giant resonance, by 40-70 MeV electrons 4=19672
- O¹⁶, giant dipole resonance 4=15144
- O¹⁶, giant resonance, e.m. structure 4=17033
- O¹⁶, inelastic proton scatt. 3=2451
- O¹⁶, no formation of bound state of two nuclei 0=13251-3
- O¹⁶, particle-hole model, two-body forces 4=15145
- O¹⁶, particle-hole states, by electron scattering 4=3563
- O¹⁶, by proton inelastic scatt. at 150 MeV, high-energy
 γ -rays 1=8723
- O¹⁶, by proton scatt., diff. cross-section, calc. 1=3442
- O¹⁶, 6.06 MeV monopole transition, double γ
emission 1=17062
- O¹⁶, 3⁻ collective state, by neutrons, calc. 2=18264
- O¹⁶, two-particle excitation of low states 3=15104
- O¹⁶, 2⁺ states, by C¹²(α , γ)O¹⁶ 0=5730
- O¹⁶, unnatural parity, in α scatt. 4=28063
- O¹⁶, up to 15.0 MeV, total cross-section 4=9532
- O¹⁸(γ , n) O¹⁷, single-particle modes obs. 4=9479
- O¹⁸, inelastic electron scatt. 3=10240
- O¹⁸, 3.92 and 4.45 MeV states de-excit. 4=22014
- O¹⁸, transition probability 3=10331
- O¹⁶-C¹² scattering, elastic and inelastic, 168 MeV 4=25439
- Os, Coulomb, second 2⁺ state 1=8725
- Os^{186,188}, first excited states, lifetimes 2=16325
- Os^{186,188,189,190,192}, Coulomb, internal conversion
electrons 1=3425
- P²⁹, by proton scatt. on Si²⁸ 1=7327
- P³¹, α -ray scatt., 18.2 MeV meas. analysis 4=22182
- P³¹, Coulomb, by Ne²⁰ ions 2=18267
- P³¹, giant dipole res. 2=13999
- P³¹, by inelastic scatt. of fast electrons 4=17121
- P³¹, by protons 2=3567
- Pa^{227,228,230}, by protons 2=10098
- Pb, Coulomb, by 11 MeV α -particles 0=3821
- Pb, by 40 MeV electrons, electron spectra 1=681
- Pb²⁰⁴(n, n')Pb^{204m}, for different energy distrib. 4=28047
- Pb^{204,206,207}, by α -rays meas. 2=8009
- Pb²⁰⁵, isomeric transitions 1=5864
- Pb²⁰⁸, first excited state, by neutron scatt., direct-
interaction contrib. 1=8735
- Pb²⁰⁸⁻⁴, by protons, configuration mixing 3=8020
- Pb²⁰⁸, inelastic neutron scatt., Hauer-Fleshback
theory 4=28039
- Pb²⁰⁸, by 183 MeV electrons 1=10965
- Pb²⁰⁸, by 183-600 MeV electrons 3=10333
- Pb²⁰⁸, 3⁻ collective state, by neutrons, calc. 2=18264
- Pd¹⁰⁴, second 2⁺ level, 1.34 MeV, Coulomb,
N ions 4=1021
- Pd¹⁰⁶, Coulomb excit. by 45 MeV oxygen ions 2=22740
- Pd¹⁰⁶, Coulomb, by oxygen ions 2=1819
- Pd^{106,110} 2=1818
- Pd^{108,110}, Coulomb excitation by oxygen-16 ions 2=12140

Nuclear excitation—contd

- Pr¹⁴¹, Coulomb, by Ne²⁰ ions 2=18267
- Pt, Coulomb, by 11 MeV α -particles 0=3821
- Pt, Coulomb, second 2⁺ state 1=8725
- Pt isotopes, collective excitation 1=7321
- Pt¹⁹², rotational band 2=5804
- Pt¹⁹⁴⁻⁵, Coulomb 0=13145
- Pt¹⁹⁶, Coulomb, by 3-5.5 MeV protons and
 α -particles 0=1407
- Pt¹⁹⁶, multipole order of process 2=10008
- Pt¹⁹⁶, radiative capture of neutrons, γ -intensity 1=17111
- Pt¹⁹⁶, resonance neutron capture, J = 1 levels
study 1=16999
- Pt¹⁹⁶, 333 keV 2⁺ \rightarrow 2⁺ transition 2=10060
- Pu²⁴⁰ fission, deform. at saddle point, pairing effect 4=3718
- Re¹⁸⁷, resonant γ -absorption, in crystal lattice 0=9525
- Rh¹⁰¹ proton excitation 1=667
- Ru^{102,106}, Coulomb excitation by oxygen-16
ions 2=1819, 12140
- S³², by α -particles at 18 MeV 0=2668
- S³², 2.24 and 4-5 MeV levels, ang. distrib. of exciting
14.5 MeV neutrons 4=17164
- S³², Coulomb, by Ne²⁰ ions 2=18267
- Sc^{44,44m}, relative, in nuclear reactions 4=9422
- Sc⁴⁶, polarized, in Fe alloy, γ -ray asymmetry, effective
mag. field 0=20787
- Se, even-even nuclei, Coulomb excit. 2=13982
- Se⁷⁶, Coulomb excitation with N,O,Ne ions 1=2243
- Se^{76,78}, Coulomb excitation by O¹⁶-ions 4=19689
- Se^{76,78}, Coulomb, by heavy ions, second-order
effects 4=22029
- Se^{76,78,80}, second 2⁺ state, by α particles 2=10141
- Se⁷⁷, Coulomb, excited-state lifetime 1=4841
- Se⁷⁷, by protons and deuterons 1=5907
- Se⁷⁸, Coulomb excitation with N,O,Ne ions 1=2243
- Se⁸⁰, Coulomb excitation with N,O,Ne ions 1=2243
- Se⁸², Coulomb excitation with N,O,Ne ions 1=2243
- Si, 11.40 MeV level, by photons, level width 0=17621
- Si, by 40 MeV electrons, electron spectra 1=681
- Si, γ -ray resonant scatt. 2=1861
- Si, giant dipole res. 2=13999
- Si, natural, by protons at 0.3-1.84 MeV, γ -ray yields,
55 resonances 0=17594
- Si, strong M1 transitions, form factors 4=19760
- Si²⁸, Coulomb excitation with N,O,Ne ions 1=2243
- Si²⁸, by electron scattering 3=4625
- Si²⁸, photo, electric dipole states, calc. 4=17045
- Si²⁸, by proton scatt., resonance in P³¹ 1=4868
- Si²⁸, resonance fluorescence 0=413
- Si²⁸, unnatural parity in α scatt. 4=28063
- Si²⁸, unnatural parity state, by α 's, 22.5 MeV 3=15229
- Sm¹⁴⁷, Coulomb, gamma-ray spectra 3=19782
- Sm^{148,150}, by 12 MeV protons 4=9412
- Sm¹⁴⁹, 22 keV transition 2=14357
- Sm¹⁴⁹, 22 keV transition 3=6459
- Sm¹⁵², Coulomb excit. by p and d bomb. 0=11415
- Sm¹⁵², Coulomb, excitation functions, precision
meas. 4=22042
- Sm¹⁵³, deformed, Coulomb excit. of vibrational
states 4=22040
- Sm^{152,154}, low-lying collective states, by proton
scatt. 4=27976
- Sm^{152,154}, by O ions, double Coulomb effect 3=8134
- Sm¹⁶², by O¹⁶ ions, and band mixing 4=6267
- Sn, even isotopes, 2⁺ level, by d scatt., 13.6 MeV 4=22127
- Sn¹¹⁶, 1.27 MeV level 3=639
- Sn¹¹⁸, neutron strength functions 4=3678
- Sn^{118,20}, by d, p reactions, 13.6 MeV 4=22127
- Sn¹¹⁹, γ -ray resonance absorption spectra,
23.8 keV 2=2368
- Sn¹¹⁹, γ -ray resonant absorptions 0=5661
- Sn¹¹⁹, γ resonance absorption, Zeeman effect 1=2164
- Sn¹¹⁹, resonance γ -ray absorption in Mn-Sn ferromag.
alloys, nuclear Zeeman effect 1=621
- Sn¹¹⁹, resonant γ -ray absorption in Mn-Sn alloys 1=9023
- Sn¹¹⁹, 24 keV transition, h.f.s., by Mössbauer effect 1=10861
- Sn^{119m}, recoilless γ -emission at 24 keV, thermal red
shift 1=5831
- Sr, by α -particles 0=20469
- Sr⁸⁸, quadrupole, form factors 3=8081
- Sr⁸⁸, resonance fluorescence 0=413
- Ta, Coulomb, by 11 MeV α -particles 0=3821

Nuclear excitation—contd

- Ta¹⁸¹, Coulomb, conversion electrons 0=15551
 Ta¹⁸¹, Coulomb, γ ang. correl. 0=9606
 Ta¹⁸¹, by 5.5 and 6.5 MeV protons 1=7328
 Ta¹⁸¹, giant dipole res. 2=13999
 Ta¹⁸¹, inelastic neutron scatt., Hauer—Fleshback theory 4=28039
 Ta¹⁸¹, by 183-600 MeV electrons 3=10333
 Tb¹⁴⁹, from complex nuclei reactions 3=15119
 Tb¹⁵⁹, by 60 MeV O¹⁶ ions 3=15120
 Tc⁹⁹, Coulomb, gamma-ray spectra 3=19782
 Te¹²⁴, γ -ray resonance scatt. 1=16974
 Te¹²⁵, Mössbauer effect for 35.5 keV transition 2=22713
 Th^{230,232}, Coulomb, internal conversion electrons 1=3425
 Th²³², Coulomb excitation by 4-6 MeV protons 1=624
 Th²³², by fast neutrons 2=10113
 Th²³², inelastic neutron scatt., Hauer—Fleshback theory 4=28039
 Th²³², multiple Coulomb excitation by A⁴⁰ ions 0=448
 Th²³², neutron average transmission and p-wave strength functions 4=6344
 Th²³², p wave neutron resonances 4=12162
 Th²³², by protons and deuterons 1=5908
 Ti, by deuterons 1=3455
 Ti⁴⁶, Coulomb excitation with N,O,Ne ions 1=2243
 Ti⁴⁷, Coulomb, excited-state lifetime 1=4841
 Ti⁴⁷, Coulomb, by Li^{6,7}, γ -ray yields 0=4107
 Ti⁴⁸, by α -particles 0=20469
 Ti⁴⁸, Coulomb excitation with N,O,Ne ions 1=2243
 Tl²⁰³, resonance γ -ray scatt. from 279 keV level, ultracentrifuge method 1=7357
 Tm¹⁶⁵, conversion electrons, no. per decay, half life, meas. 4=30327
 Tm¹⁶⁹, Coulomb, conversion electrons 0=15551
 Tm¹⁶⁹, by 60 MeV O¹⁶ ions 3=15120
 U, natural, by 0.3-1.5 MeV neutrons 4=3667
 U²³², by Pa²³² β -decay 3=12604
 U²³⁴ fission, deform. at saddle point, pairing effect 4=3718
 U^{234,236,238}, Coulomb, internal conversion electrons 1=3425
 U^{234,238}, decay to first excited state 0=11348
 U²³⁸, Coulomb excitation by 4-6 MeV protons 1=624
 U²³⁸, inelastic neutron scatt., Hauer—Fleshback theory 4=28039
 U²³⁸, multiple Coulomb excitation by A⁴⁰ ions 0=448
 U²³⁸, neutron average transmission and p-wave strength functions 4=6344
 U²³⁸, neutron excitation cross-sections, level < 1 MeV 2=5927
 U²³⁸ by protons and deuterons 1=5908
 U²³⁸, rotational levels, in μ -mesic atom transitions 2=385
 U²³⁹, partial radiation widths, fluctuations 4=19705
 V⁵¹, by electron inelastic scatt., calc. and meas. 3=664
 V⁵¹, by 17.45 MeV protons 4=15204
 W, Coulomb, second 2⁺ state 1=8725
 W, by proton and deuteron scatt. 1=13787
 W^{182,184,186}, Coulomb, gyromagnetic ratio of 2⁺ states 2=18244
 W¹⁸⁴, inelastic neutron scatt., Hauer—Fleshback theory 4=28039
 W¹⁸⁴, by O ions, double Coulomb effect 3=8134
 W¹⁸⁴, residual levels, by neutron scatt. 3=22399
 W¹⁸⁴, resonance neutron capture, J = 1 levels study 1=16999
 W¹⁸⁶, by 6.7-12.6 MeV protons 1=5905
 Y^{87,87m}, relative, in nuclear reactions 4=9422
 Y^{88(n,n')} 3=10363
 Y^{90e,90m}, ratios from Rb⁸⁹(α ,n) and Y⁸⁹(d,p) 4=17197
 Yb¹⁷⁸, by O ions, double Coulomb effect 3=8134
 Zn, by electron scatt., 300 keV-1.5 MeV 4=22148
 Zn, by deuterons 1=3455
 Zn⁶⁴, α -induced reactions, excitation functions 0=444
 Zn⁶⁴, by 9.6-11.7 MeV protons 3=10259
 Zn^{64,66,68}, by α -particles, second level 2=494
 Zn^{64,66,68}, collective, by α -particles 3=15106
 Zn^{64,66,68} Coulomb excitation with N,O,Ne ions 1=2243
 Zn^{64,66,68}(p,p'), 5.8 MeV, p- γ ang. correl. 4=17125
 Zn⁶⁷, Coulomb, excited-state lifetime 1=4841
 Zn⁶⁷, Mossbauer effect, ultra-high resolution 0=13126
 Zn⁶⁷, 93 keV γ -ray, no resonant absorption 0=11315
 Zn⁶⁷, recoilless reson. γ -absorption, 92 keV 1=13633
 Zn and Zn⁶⁴, with α -particles 0=20469

Nuclear excitation—contd

- Zr⁹⁰, by α , and 4⁻ =2.75 MeV level from γ - α coincidences 4=22031
 Zr^{90(n,n')}Zr^{90m}, to 5 MeV 3=15208
 Zr⁹⁰, two-phonon de-excitation of 0⁺ level 1=13732
 Zr^{92,94}, Coulomb excitation with N,O,Ne ions 1=2243

 yield curve, rel. to magic number 50=Z 2=12229
 Ag, by 300-1000 MeV photons, meas. 4=19844
 Ag and Br in emulsions, by 1-3 BeV protons 1=11015
 Ag, by protons, 1.0-3.0 BeV, in emulsion 2=10158
 Al, by protons, 660 MeV, Be⁷ yield 2=20689
 Al and Al alloys, swelling after α -ray irradiation 3=4896
 Am²⁴¹, ang. distrib. of products 0=1451
 Am²⁴¹, spontaneous 0=11465
 Am²⁴¹, spontaneous fission half-life 1=19540
 Am²⁴¹, spontaneous fission half-life 3=4675
 Am²⁴³, by neutrons, 0.3-1.7 MeV, cross-sections 2=507
 At^{209,210,212} cpd. nuclei, spallation competition 2=14141
 At²¹³, by He ions, threshold calc. 2=10156
 Au, by C¹² ions at 68-124 MeV, cross-sections, fragment ang. distrib. and energy spectra 0=20516
 Au, by C¹² and O¹⁶ ions, ang. distrib. of fragments 0=9712
 Au, by He ions, 30-43 MeV 2=10156-7
 Au, by O nuclei, ang. distrib. of products 0=17636
 Au, by 156 MeV protons, ang. distrib. and cross-sections 4=17213
 Au, by 660 MeV protons 0=13298
 Au, by 2.9 GeV protons, nuclear charge distrib. 3=8149
 Au-Si, surface barrier detectors 2=3634
 Au¹⁹⁷, by C ions, at 93 and 123 MeV, fragment ang. distrib. 0=13306
 Au¹⁹⁷, by C¹² and O¹⁶, fragment energies and ang. distrib., total cross-sections 1=746
 Au¹⁹⁷, by C¹² and O¹⁶, kinetic energy release 3=15250

Nuclear fission—contd

- Au¹⁹⁷, by He ions, mass-yield curves 3=10398
 Au¹⁹⁷, by He³, 25 MeV 2=14152
 Au¹⁹⁷, by heavy ions, ang. distrib. of fragments 3=10399
 Au¹⁹⁷, by heavy ions, Cd¹¹⁵, ^{115m} formation 0=9711
 Au¹⁹⁷, induced by various ions, momentum transfer 4=22243
 Au—Si, surface barrier detector for fragments 4=27721
 Au—Si, surface barrier detector for fragments, pulse height meas. 4=28080
 Be⁹, in Coulomb field of heavy nuclei 3=24977
 Bi, by C, N and O ions, 60–100 MeV 0=7588
 Bi chamber, for neutron detection 1=13450
 Bi, by 480 MeV protons 0=7633
 Bi, by 450 MeV protons, fragment ang. distrib. 0=9699
 Bi, by 156 MeV protons, ang. distrib. and cross-sections 4=17213
 Bi, by He ions, 30–43 MeV 2=10156-7
 Bi, photofission between 300 and 1000 MeV 1=8800
 Bi, by protons, 156 MeV, ang. correl. 3=10400
 Bi, by protons, 660 MeV 2=14151
 Bi, by protons, 660 MeV, F¹⁸, Na²⁴, Mg²⁸, P³² yields 2=20689
 Bi, by protons, 660 MeV; F¹⁸, Na²⁴, Mg²⁸, P³² yields 3=8150
 Bi, by protons, 20–22 GeV 3=8146
 Bi, by 680 MeV protons 0=5805
 Bi, by 300–1000 MeV photons, meas. 4=19844
 Bi²⁰⁹, by C¹² and O¹⁶, fragment energies and ang. distrib., total cross-sections 1=746
 Bi²⁰⁹, by C¹² and O¹⁶, kinetic energy release 3=15250
 Bi²⁰⁹, by He³, 25 MeV 2=14152
 Bi²⁰⁹, by heavy ions, ang. distrib. of fragments 3=10399
 Bi²⁰⁹, helium-ion induced, binary studies 4=15246
 Bi²⁰⁹, by 135 MeV protons, calc. 3=4638
 Bi²⁰⁹, by protons at 36 and 58 MeV, asymmetric mode 1=3471
 Bi²⁰⁹, by protons, 600 MeV 2=20688
 Br, by protons, 1.0–3.0 BeV, in emulsion 2=10158
 C¹² + C¹² → 6α, ang. momenta, statist. model 4=6380
 Cf²⁵², fission neutron spectrum 1=17170
 Cf²⁵², frequent meas. by double energy and double vol., comparison 3=24987
 Cf²⁵², prompt neutrons, statistical model study 4=19838
 Cf²⁵², spont. fission, prompt neutrons 3=10393
 Cf²⁵², spontaneous 1=13867
 Cf²⁵², spontaneous, α-spectrum, tripartition 1=747
 Cf²⁵², spontaneous, α and t energy spectra 1=748
 Cf²⁵², spontaneous, 50 000 events 0=20517
 Cf²⁵², spontaneous, fractional yields 2=12236
 Cf²⁵², spontaneous, γ ray peaks, prompt 4=17208
 Cf²⁵², spontaneous, kinetic energy meas. and fine structure 4=6389
 Cf²⁵², spontaneous, from long-range particles meas. 2=12230
 Cf²⁵⁴, spontaneous, mass and energy distrib. 3=24990
 Cf^{252, 254}, spontaneous, neutrons per fission 4=6390
 Cf²⁵², spontaneous, neutron production rate 3=24988
 Cf²⁵², spontaneous, neutron yields from individual fragments 2=18269
 Cf²⁵², spontaneous, prompt neutrons 2=3640, 14145
 Cf²⁵², spontaneous, tritium produced 4=22240
 Cf²⁵², spontaneous, yield curve, radiochemical study 0=15609
 Cf²⁵², ternary 4=22244
 Cf²⁵⁴, spontaneous, in supernova type I, possibility 0=12331
 Cf²⁵⁴, in supernovae 2=5757
 Cm^{242, 244}, spontaneous, from long-range particles meas. 2=12230
 Cm²⁴⁴, spontaneous, binary, ternary, high energy α's 4=19837
 Cm²⁴⁴, spontaneous fragment energy distrib. 4=6388
 Cm²⁴⁴, triple spontaneous, α-particle spectrum, energy meas. 4=28073
 Cm²⁴⁸, spontaneous, mass and energy distrib. 3=24990
 Cu, by protons, 660 MeV, Be⁷, F¹⁸, Na²⁴, P³² yields 2=20689
 Cu, by protons, 660 MeV; Be⁷, F¹⁸, Na²⁴, P³² yields 3=8150
 Es²⁵⁸, spontaneous, mass and energy distrib. 3=24990
 Fm²⁵⁴, cpd. nucleus, mass-energy relns. 3=24989
 Fm²⁵⁴, prod. by Pu²⁴¹ + C¹³ and U²³⁸ + O¹⁶ 0=9649
 Fm²⁵⁴, spontaneous, mass and energy distrib. 3=24990
 He induced, saddle deformation, rel. to fragment ang. distrib. 2=10157
 Ho¹⁶⁵, by C¹² and O¹⁶, kinetic energy release 3=15250

Nuclear fission—contd

- Ho¹⁶⁵, induced by various ions, momentum transfer 4=22243
 Ho¹⁶⁵, by O¹⁶ and Ne²⁰, effect of ang. momentum 3=6312
 In, by 2.9 GeV protons, nuclear charge distrib. 3=8149
 Li⁶ photofission, low-energy t and d prodn. 4=25444
 Li⁷, by 5.7 MeV electrons, into t + α 4=12211
 Lu¹⁷⁵, by C¹² and O¹⁶, kinetic energy release 3=15250
 Mg²⁴, into 2C¹², by 70 MeV bremsstrahlung 3=15247
 Ne²⁰, α-induced, ground-state transition 3=2507
 Ne²⁰, by α-particles, excited states of Mg²⁴ and ang. distrib. of C nuclei 2=14153, 16444
 Np²³⁷, ang. distrib. of products 0=1451
 Np²³⁷, by 5–37 MeV neutrons, meas. 4=22241
 Np²³⁷, by 4–12 MeV protons, meas. 4=12269
 Np²³⁷, by 14 MeV neutrons, fore-aft yields 1=2250
 Np²³⁷, by n, 5–37 MeV 4=3711
 Np²³⁷, by neutrons, cross-section 0=1452
 Np²³⁷, by neutrons at 14 MeV 0=11459
 Np²³⁷, by neutrons at 0.5–9 MeV, fragment ang. distrib. 0=17635
 Np²³⁷, by neutrons at 0.9–8 MeV, cross-section 0=4131
 Np²³⁷, by n, var. with energy 4=12290
 Np²³⁷, by neutrons, 10–22 MeV, cross-section 3=10395
 Np²³⁷, photofission cross-sections, 7.0 MeV 2=14150
 Np²³⁷, prompt neutrons 0=11457
 Np²³⁷, spontaneous fission half-life 1=19541
 Np²³⁷, spontaneous fission half-life 3=4676
 Np²³⁷/U²³⁸ cross-section ratio 1=17166
 Pa, by protons, competition with neutron emission 2=10098
 Pb, by protons, 660 MeV 2=14151
 Pb, by 3 BeV protons, cross-sections for prod. of Cl, K, Ca and Sc 0=5747
 Pb^{204, 206}, by He ions, mass-yield curves 3=10398
 Pb²⁰⁶, by He ions, 30–43 MeV 2=10156-7
 Pb²⁰⁸, by Ar⁴⁰ bombardment, ternary 4=22244
 Po²¹⁰, by He ions, threshold calc. 2=10156
 Pr¹⁴¹, by C¹² and O¹⁶, kinetic energy release 3=15250
 Pu, delayed neutrons 0=7649
 Pu, relative rates in U-water enriched lattices 2=8018
 Pu²³⁹, neutron capture to fission ratios 2=8016
 Pu^{238, 239}, by thermal neutrons, cross-sections 0=1455
 Pu^{238, 240}, spontaneous, α-spectra 4=1115
 Pu²³⁹, with α emission, energy distrib. 1=19483
 Pu²³⁹ containing Pu²⁴⁰, η meas. 0=4135
 Pu²³⁹, cross-section temperature dependence 1=741
 Pu²³⁹(d, pf), cross-section energy depend. 4=1116
 Pu²³⁹, delayed neutrons 0=5811
 Pu²³⁹, emission of prompt neutrons 1=13869
 Pu²³⁹, emitted neutron spectra, structure phenom. 4=1112
 Pu²³⁹, and excitation functions 3=6184
 Pu²³⁹, fission neutron spectrum 1=17170
 Pu²³⁹, η for epithermal neutrons 0=4133
 Pu²³⁹, η for 30–900 keV neutrons 0=4134
 Pu²³⁹, η value in sub-cadmium energy range 0=13302
 Pu²³⁹, η for vel. of 2200 m/sec 3=2504
 Pu²³⁹, by fast neutrons, delayed γ-rays meas. 4=19842
 Pu²³⁹, by fast neutrons, ν_{eff} and σ_t + σ_a values 0=11456
 Pu²³⁹, by fast and thermal neutrons, neutron spectra, effective temp. 0=20514
 Pu²³⁹, by 15 MeV neutrons, delayed neutron curve 4=6400
 Pu²³⁹, by 4–12 MeV protons, meas. 4=12269
 Pu²³⁹, by 14 MeV n's, n's prod. by fission and interaction 4=9578
 Pu²³⁹(γ, f), cross-section energy depend. 4=1116
 Pu²³⁹, γ-radiation from fragments 1=17174
 Pu²³⁹, ν factor, thermal to fission neutrons 0=7645
 Pu²³⁹, low-energy neutron cross-sections, analysis 0=9706
 Pu²³⁹, low energy neutron fission widths 2=7992
 Pu²³⁹, by μ-mesons, probab. 2=511
 Pu²³⁹, by n, cross-section, 0.3–2.5 MeV 3=6309
 Pu²³⁹, by n, 5–100 eV 4=17140
 Pu²³⁹, n-induced, α-spectra 4=1115
 Pu²³⁹, by n time-of-flight, correction 3=17503
 Pu²³⁹, neutron fission threshold, from (d, p) reaction 0=1415
 Pu²³⁹, neutron numbers 0=2693
 Pu²³⁹, neutron yields, 0.006–0.36 eV 0=7636
 Pu²³⁹, by neutrons, ang. distrib. of fragments 0=1456
 Pu²³⁹, by neutrons, neutron yields from individual fragments 2=18369
 Pu²³⁹, by neutrons at 0.5–9 MeV, fragment ang. distrib. 0=17635
 Pu²³⁹, neutrons per fission, energy depend. 4=22242

Nuclear fission—contd

Pu²³⁹, by pile neutrons, yields of Sr⁹⁰ and Sr⁸⁸ 1=7408
 Pu²³⁹, by neutrons at 7-30 eV, meas. of η 0=7635
 Pu²³⁹, by neutrons, 12.6-20 MeV 2=3636
 Pu²³⁹, prompt neutron yield 0=11458
 Pu²³⁹, ratio of 0.0011 eV absorption to fission cross-sections 0=7639
 Pu²³⁹, reactivity change on high irradiation 1=19566
 Pu²³⁹, resonance absorption 2=3638
 Pu²³⁹, slow cross-section correl. 0=7480
 Pu²³⁹, by slow n, level interference calc. 4=19841
 Pu²³⁹, thermal neutron fission cross-sections 4=17209
 Pu²³⁹, by thermal neutrons, ang. correl. of fragments and prompt γ -rays 4=9585
 Pu²³⁹, by thermal neutrons, fractional yields 2=12236
 Pu²³⁹, by thermal neutrons, time-of-flight studies 3=4677
 Pu²³⁹, by thermal neutrons, "world-average" cross-sections 0=5806
 Pu²³⁹, total effective cross-section in resonance region 0=7647
 Pu²³⁹, triple fission, by neutrons, 0.05 to 0.7 eV 3=17505
 Pu^{239,240}, ang. distrib. of products 0=1451
 Pu^{239,240}, neutron cross-sections 30 keV-5 MeV 0=7643
 Pu^{239,241}, fission rates rel. to U²³⁵, in U-fueled lattices 1=17164
 Pu^{239,241}, by neutrons, asymmetric/symmetric yield ratios, energy depend. 0=17634
 Pu^{239,241}, ternary 4=9579
 Pu^{239,241}, by thermal neutrons, fragment mass distrib. 4=12286
 Pu²³⁹-U²³⁵, rel. conversion factors in U, and water lattices 0=2702
 Pu²³⁹ and U²³⁵, 14 MeV, average neutron production 4=9578
 Pu²³⁹-U²³⁵, ratio of effective cross-sections for various lattices 0=2692
 Pu²³⁹/U²³⁵ ratio meas. 4=28075
 Pu²³⁹/U²³⁸ cross-section ratio 1=17166
 Pu²⁴⁰, by C¹² and O¹⁶, kinetic energy release 3=15250
 Pu²⁴⁰ (d, pf), and pairing at barrier 4=3718
 Pu²⁴⁰, neutrons emitted in symmetrical fission region 3=10401
 Pu²⁴⁰, by neutrons, 0.04-4.0 MeV 2=12232
 Pu²⁴⁰, spontaneous, half-life meas. 2=10152
 Pu²⁴⁰, spontaneous, neutrons per fission 4=6390
 Pu²⁴⁰, spontaneous, prompt neutron number 2=3640
 Pu²⁴⁰, symmetric, neutron emission numbers 3=17502
 Pu^{240,242}, periods of spontaneous fission 4=6387
 Pu^{240,242}, spontaneous and by neutrons 2=12230
 Pu²⁴¹, η value in sub-cadmium energy range 0=13302
 Pu²⁴¹, by heavy ions, competition with neutron evap. 0=11463
 Pu²⁴¹, by neutrons below 11 eV, meas. 4=9584
 Pu²⁴¹, by neutrons, 0.02-1.80 MeV, cross-sections 2=507
 Pu²⁴¹, neutrons per fission at thermal energies 0=20513
 Pu²⁴¹, by neutrons, 2-100 eV, meas. analysis 4=28074
 Pu²⁴¹, by 0.-12 eV neutrons 1=11027
 Pu²⁴¹, by thermal neutrons, delayed-neutron activity 1=12226
 Pu²⁴², by neutrons, 0.1-1.7 MeV, cross-section 0=7637
 Ra²²⁶, by deuterons, 14 and 21 MeV, and He ions, 23-43 MeV 0=9710
 Ra²²⁶, by deuterons, 10.8 and 13.6 MeV 2=14152
 Ra²²⁶, helium-ion induced, binary studies 4=15246
 Ra²²⁶, by protons at 11-22 MeV, ranges and yields of Sr⁹¹ and Pd¹¹² 0=17632
 Re¹⁸⁵, by C¹² and O¹⁶, effect of ang. momentum 3=6312
 Sb, by protons, 660 MeV, Be⁷, F¹⁸, Na²⁴, Mg²⁸, Si³¹, P³ yields 2=20689
 Sb, by 660 MeV protons 1=17176
 Si²⁸, α -induced, search for 3=2508
 Sn, by protons, 660 MeV, F¹⁸, Na²⁴ yields 2=20689
 Sn, by protons, 660 MeV, F¹⁸, Na²⁴ yields 3=8150
 Ta¹⁸¹, by O¹⁶ and Ne³⁰, effect of ang. momentum 3=6312
 Th¹⁸⁸, by C¹² and O¹⁶, kinetic energy release 3=15250
 Th, delayed neutrons 0=7649
 Th, in emulsions, by 600 MeV protons 1=2249
 Th, fission chamber meas. of fast neutron fluxes 1=13449
 Th, by 480 MeV protons 0=7633
 Th, photofission between 300 and 1000 MeV 1=8800
 Th, by protons, 20-22 GeV 3=8146
 Th, spontaneous, even-even isotopes 2=20685
 Th, by 680 MeV protons 0=5805
 Th, by 340 MeV protons, calc. 0=15607

Nuclear fission—contd

Th²²⁹, effective cross-section for 6-1200 keV neutrons 0=4132
 Th²³⁰, by α -particles, two distinct modes det. 4=9587
 Th²³⁰, by deuterons, fragment velocities meas. 4=9588
 Th²³⁰, by n, var. with energy 3=12290
 Th²³⁰, by neutrons 0=1452
 Th²³⁰, by neutrons at 0.5-9 MeV, fragment ang. distrib. 0=17635
 Th^{230,232}, by α -particles, fragment velocities meas. 4=9588
 Th²³², by α -particles, two distinct modes det. 4=9587
 Th²³², ang. distrib. of products 0=1451
 Th²³², by C¹² and O¹⁶, kinetic energy release 3=15250
 Th²³² cross-section, 14.6 MeV neutrons 1=19547
 Th²³², by d and α , Kr isotope yield 2=1938
 Th²³², delayed neutrons 0=5811
 Th²³², deuteron induced, cross-sections 3=24993
 Th²³², emission of prompt neutrons 1=13869
 Th²³², by fast neutrons, delayed γ -rays meas. 4=19842
 Th²³², by 5-37 MeV neutrons, meas. 4=22241
 Th²³², by 14 MeV neutrons 0=11459
 Th²³², by 14.9 MeV neutrons, fragment masses 0=9702
 Th²³², fragments, total energy rel. to mass ratio 4=9580
 Th²³², by γ -rays, monochrom., 6.61 MeV 2=18367
 Th²³², by He⁴, at 15-46 MeV, spallation-fission competition 0=1450
 Th²³², by He⁴, product relative yields 3=688
 Th²³², by He⁴, 20-43, fragment anisotropy 2=510
 Th²³², by He, 27.8 MeV, symmetrical peak in energy contour diagram 4=15247
 Th²³², by heavy ions, competition with neutron evap. 0=11463
 Th²³², by n, 5-37 MeV 4=3711
 Th²³², by neutrons, 10-22 MeV, cross-section 3=10395
 Th²³², neutron fissionability 0=13300
 Th²³², by 1-2 BeV protons 1=11016
 Th²³², by 1.4 MeV neutrons, no. of prompt. neutrons, rel. to U²³⁸ 0=1454
 Th²³², photofission cross-sections, 7.0 MeV 2=14150
 Th²³², photofission at 70 MeV, fragment kinetic energy 1=8789
 Th²³², photofission at 6.61 MeV 3=24991
 Th²³², by photons, delayed neutron yield 2=12233
 Th²³² products, independent photofission yield, charge distrib. 3=19895
 Th²³², prompt neutrons 0=11457
 Th²³², by protons and deuterons, 3-12 MeV 3=24992
 Th²³², by protons and He ions, long-range particle emission 4=9589
 Th²³², by protons, mass yields, rel. to two-mode-of-fission hypothesis 0=11453
 Th²³², by protons, 600 MeV, noncollinear events 2=20688
 Th²³², resonance fission, 1.6 MeV neutrons, ang. distrib. 0=17631
 Th²³², by 6.61 MeV γ -rays, ang. distrib. 3=24991
 Th²³², by thermal neutrons 0=9701
 Th²³², by transitions bet. μ -mesic atomic states 3=8145
 Th²³², by 20 MeV X-rays, delayed γ -rays 4=19845
 Th²³², by 2.95 and 14.8 MeV neutrons, fine structure 4=12287
 Th²³², rel. yield of delayed neutrons 0=2694
 Tl²⁰¹, barrier, from Au¹⁹⁷-He collisions 4=19848
 Tl, by He ions, 30-43 MeV 2=10156-7
 Tl to Pu, deuteron induced, fragment ang. distrib. 3=19898
 Tm¹⁶⁹, by C¹² and O¹⁶, effect of ang. momentum 3=6312
 Tm¹⁶⁹, by C¹² and O¹⁶, kinetic energy release 3=15250
 U, α -phase, by neutrons, crystal growth effect 2=12880
 U, delayed neutrons 0=7649
 U, by deuterons, mass yields, rel. to two-mode-of-fission hypothesis 0=11453
 U, by fast protons, momentum and excit. energy of U nucleus 0=2689
 U, by 460 MeV protons 0=13296
 U, by 480 MeV protons 0=7633
 U, irradi., density changes 2=20724
 U, irradiated, swelling under mech. restraint 3=12712
 U, irradiation growth rate eval. 3=6310
 U, natural and enriched, by neutrons, T production 0=461
 U, natural, spontaneous fission, neutron emission rate 1=3469
 U, natural, spontaneous, neutron yield 0=20518
 U, by neutrons, 2.5 MeV, compound fission 2=8015
 U, by 9 BeV protons, yields, ranges and ang. distrib. of fragments 0=13297

Nuclear fission—contd

- U, by 0.1-6.2 GeV protons, excitation functions and charge distrib. 3=8147
 U, by 156 MeV protons, ang. distrib. and cross-sections 4=17213
 U, by 185 MeV protons, product ang. distrib. 0=5804
 U, by p, d, and α , at medium energy, direct-interaction effects 0=1449
 U, photofission between 300 and 1000 MeV 1=8800
 U, by protons, 20-22 GeV 3=8146
 U, by protons, 156 MeV, ang. correl. 3=10400
 U, by protons, 660 MeV 2=14151
 U, by 660 MeV protons 0=13296, 13298
 U, by 680 MeV protons 0=5805
 U, by 680 MeV protons 4=6401
 U, by slow μ^- -mesons, 2 mechanisms 0=9709
 U, swelling, effect of thermal cycling 2=23884
 U, temp. coeff. of reactivity, meas. 0=13330
 U, by thermal neutrons, fragment ranges 1=4883
 U, by 2.9 GeV protons, nuclear charge distrib. 3=8149
 U, by 3 BeV protons, cross-sections for prod. of Cl, K, Ca and Sc 0=5747
 U, by 340 MeV protons, calc. 0=15607
 U^{232} , by neutrons, 4-400 eV, cross-section 4=25443
 U^{233} , absolute yields 0=7641
 U^{233} , age of neutrons in water 1=17205
 U^{233} , by α , 18-43 MeV, cross-section 2=1937
 U^{233} , by α -particles, fragment velocities meas. 4=9588
 U^{233} , by α -particles, two distinct modes det. 4=9587
 U^{233} , breeder core, heavy isotope buildup 0=4147
 U^{233} , cross-section and fission parameters, low energy 1=17162
 U^{233} , cross-section temperature dependence 1=741
 U^{233} , cross-sections for 3 to 800 keV neutrons 1=17171
 U^{233} , by d, at 9-24 MeV, spallation-fission competition 0=1450
 U^{233} , delayed neutrons 4=9581
 U^{233} , η value in sub-cadmium energy range 0=13302
 U^{233} , and excitation functions 3=6184
 U^{233} , fission cross-section 1=7406
 U^{233} , fission cross-section versus neutron energy 0=7644
 U^{233} , fission neutron age in water 0=15628
 U^{233} , fission neutron spectrum 1=17170
 U^{233} , by 14 MeV n's, n's prod. by fission and interaction 4=9578
 U^{233} , by 14.8 MeV neutrons, neutron yield 1=742
 U^{233} , fragment kinetic energy, channel effect 4=6394
 U^{233} , fragments, total energy rel. to mass ratio 4=9580
 U^{233} , He^4 induced, frequent meas. by double energy and double vel., comparison 3=24987
 U^{233} , by He^4 , 20-43 MeV, fragment anisotropy 2=510
 U^{233} , heavy-fragment yields 0=11455
 U^{233} , by n, epithermal, capture to fission ratios 3=22434
 U^{233} , neutron yield factor, energy dependence 0=7642
 U^{233} , by neutrons, ang. distrib. of fragments 0=1456
 U^{233} , by neutrons, cross-section, 0.02-200 eV, multilevel analysis 0=9703-4
 U^{233} , by neutrons, $Sr^{88,90}$ yields 0=11363
 U^{233} , 1.7 to 57 eV neutrons, cross-sections 3=19892
 U^{233} , prompt neutron yield 0=11458
 U^{233} , ratio neutron capture to fission 2=14148
 U^{233} , resonance energy cross-section, to 25eV 1=8790
 U^{233} , thermal neutron fission yield 1=7405
 U^{233} , by thermal neutrons, yields 2=3635, 12236
 U^{233} , total neutron cross-section, 0.000818-0.0818 eV 0=9705
 U^{233} , triple fission probab. by resonance neutrons 3=2506
 $U^{233, 235}$, channel effects, neutron energy depend. 4=17211
 $U^{233, 235}$ (d, pf), cross-section energy depend. 4=1116
 $U^{233, 235}$, η for epithermal neutrons 0=4133
 $U^{233, 235}$, η for 30-900 keV neutrons 0=4134
 $U^{233, 235}$, in critical aqueous soln., η det. 2=10155
 $U^{233, 235}$ (γ , f), cross-section energy depend. 4=1116
 $U^{233, 235}$, low-energy neutron cross-sections, analysis 0=9706
 $U^{233, 235}$, by n, cross-section, 0.3-2.5 MeV 3=6309
 $U^{233, 235}$, by n time-of-flight, correction 3=17503
 $U^{233, 235}$, neutron capture to fission ratios 2=8016
 $U^{233, 235}$, neutron cross-sections 30 keV-5 MeV 0=7643
 $U^{233, 235}$, by neutrons, neutron yields from individual fragments 2=18369

Nuclear fission—contd

- $U^{233, 235}$, by neutrons, in resonance region 2=20686
 $U^{233, 235}$, ν factor, thermal to fission neutrons 0=7645
 $U^{233, 235}$, oriented, thermal-neutron fission, fragment ang. distrib. 1=8791
 $U^{233, 235}$ and Pu^{239} , cross-section ratios in NRX type U-metal rod 4=1129
 $U^{233, 235}$, Pu^{239} triple fission, comparative characteristics 4=3716
 $U^{233, 235}$, $Pu^{239, 241}$, comparison of prompt neutron yields 0=13303
 $U^{233, 235}$, ratios of 0.0011 eV absorption to fission cross-sections 0=7639
 $U^{233, 235}$, regeneration factor, abs. thermal value 1=17163
 $U^{233, 235}$, ternary 4=9579
 $U^{233, 235}$, by thermal neutrons, ang. correl. of fragments and prompt γ -rays 4=9585
 $U^{233, 235}$, by thermal neutrons, time-of-flight studies 3=4677
 $U^{233, 235}$, by thermal neutrons, "world-average" cross-sections 0=5806
 $U^{233, 235}$, total effective cross-sections in resonance region 0=7647
 $U^{233, 235, 238}$, by fast neutrons, delayed γ -rays meas. 4=19842
 $U^{233-6, 238}$, ang. distrib. of products 0=1451
 $U^{233-6, 238}$, by MeV neutrons, fragment ang. distrib. 0=17635
 $U^{233, 235, 238}$, by n, 5-37 MeV 4=3711
 $U^{233, 235, 238}$, delayed neutrons 0=5811
 $U^{233, 235, 238}$, deuteron induced, cross-sections 3=24993
 $U^{233, 235, 238}$, by 5-37 MeV neutrons, meas. 4=22241
 $U^{233-6, 238}$, by 4-12 MeV protons, meas. 4=12289
 $U^{233-6, 238}$, photofission cross-sections, 7.0 MeV 2=14150
 $U^{233, 235, 238}$, by He^4 at 20-40 MeV, product charge distrib. 1=3473
 $U^{233, 235, 238}$, neutron fission thresholds, from (d, p) reaction 0=1415
 $U^{233, 235, 238}$, neutrons per fission, energy depend. 4=22242
 $U^{233, 235, 238}$, by protons at 22.8 MeV, cross-sections 0=1412
 $U^{233, 238}$, by He^4 , total fission cross-sections, rel. to nuclear radii 1=3474
 U^{234} (d, pf), and pairing at barrier 4=3718
 U^{234} , by fast neutrons, cross-section, fragment ang. distrib. 3=2505
 U^{234} , by μ keV-15 MeV, recommended data 4=28048
 U^{234} , neutrons emitted in symmetrical fission region 3=10401
 U^{234} , symmetric, neutron emission numbers 3=17502
 $U^{234, 235, 238}$, by neutrons, meas. 2=12230
 U^{235} , with α emission, energy distrib. 1=19483
 U^{235} , Cd ratio 3=22435
 U^{235} , chamber, B^{10} shielded, energy response 3=690
 U^{235} , cross-section between 0.03 and 60 eV 3=12709
 U^{235} , cross-section rel. to U^{234} 1=19547
 U^{235} , cross-section temperature dependence 1=741
 U^{235} , cross-sections for 3 to 800 keV neutrons 1=17171
 U^{235} , decay products, energy release 0=13301
 U^{235} , emitted neutron spectra, structure phenom. 4=1112
 U^{235} , emulsion tracks, photographic study 1=8409
 U^{235} , and excitation functions 3=6184
 U^{235} , exponential interaction between fragments, theory 1=3467
 U^{235} , by fast neutrons, ν_{eff} and $\sigma_f + \alpha$ values 0=11456
 U^{235} , by fast and thermal neutrons, neutron spectra, effective temp. 0=20514
 U^{235} , fission cross-section in resonance region 0=7647
 U^{235} , fission cross-section shape analysed 2=463
 U^{235} , fission neutron spectrum 1=17170
 U^{235} , fission neutron spectrum 2=8017
 U^{235} , fission neutron yield, 0.006-0.3 eV 0=7636
 U^{235} , fission parameters, best values for reactor calculations 0=5809
 U^{235} , by 14 MeV neutrons 1=17168
 U^{235} , by 14 MeV neutrons, fore-aft yields 1=2250
 U^{235} , fragment mass distrib., use of pulse dividing circuit 4=14980
 U^{235} , fragment total energy rel. to neutron energy 4=3710
 U^{235} , fragments, β and delayed γ -rays calc. 4=19835
 U^{235} , γ -radiation from fragments 1=17174
 U^{235} , γ -ray emission, time distrib. meas. 3=6307
 U^{235} , by He^4 , 20-40 MeV, absolute fission yields of 25 nuclides 0=1448
 U^{235} , I^{135} and Te^{135} yields 2=22862

Nuclear fission—contd

- U^{235} , investigation by product cathode sputtering in metals 3=8152
 U^{235} layer in Al foil, fragment tracks 1=2246
 U^{235} , light fragment emission 1=19542
 U^{235} , mass-99 product chain analysis 3=12708
 U^{235} , by n, low energy, prompt n number and fragment k.e. 4=6397
 U^{235} , by n, 0.03-20 eV 4=17140
 U^{235} , neutron fissionability 0=13300
 U^{235} , neutron-induced fission component 0=2696
 U^{235} , neutron spectrum, threshold reactions meas. 4=28041
 U^{235} , by neutrons, effect of fragments structure 3=22436
 U^{235} , by neutrons up to 8 MeV, average number of prompt. neutrons 4=12285
 U^{235} , by neutrons, emitted neutron spectra 2=14149
 U^{235} , by neutrons, emitted neutron spectra 3=6311
 U^{235} , by neutrons at 14 MeV, product relative yields 3=688
 U^{235} , by neutrons at individual resonances, 10-60 eV, symmetry 1=8799
 U^{235} , by neutrons below 0.5 eV, mass yields 3=22437
 U^{235} , by neutrons, product yields 0=13299
 U^{235} , by neutrons, prompt neutrons per fission study 2=10162
 U^{235} , by neutrons, resonance fission widths for levels from 6 to 50 eV 0=4138
 U^{235} , by neutrons, review of fission parameter values 0=5809
 U^{235} , neutrons, slowing down in uranium-water media 0=3974
 U^{235} neutrons, slowing down in water 0=3972
 U^{235} , by neutrons, symm. at resonances 3=15243
 U^{235} , by neutrons, 10-22 MeV, cross-section 3=10395
 U^{235} , by neutrons, triple fission, two events in emulsion 0=5808
 U^{235} , by 0.065-14 MeV neutrons, mass-yield symmetry 1=17169
 U^{235} , oxide, neutron flux meas., thermocouple system 2=3364
 U^{235} , by photons, cross-section meas. 4=9481
 U^{235} , poisoning by products 0=4148
 U^{235} , prompt neutron yield 0=11457-8, 11461
 U^{235} , purely proton moderated spect., collision density 1=17159
 U^{235} , radiative capture, 0.03-20 eV 4=17140
 U^{235} , rare earth region yields 0=7648
 U^{235} , relative fission rates, energy depend., in $U-H_2O$ lattices 1=17165
 U^{235} , resonance integral calc. 2=22857
 U^{235} , slow cross-section correl. 0=7480
 U^{235} , by slow n, γ ang. distrib. 3=12711
 U^{235} , by slow n, level interferences calc. 4=19841
 U^{235} slow neutron fission, prompt neutron energy and ang. distrib. 3=19893
 U^{235} as source of electricity, converters, review 4=29861
 U^{235} , symmetric, nuclear charge distribution 3=19894
 U^{235} ternary 1=7407

Nuclear fission — contd
products — contd

Kr isotope yield, by d and α fission of Th and U 2=1938
 Kr⁸⁵, separation, γ -ray quantum yield 1=19418
 Kr⁸⁵, from UO₂ irradiated and annealed 2=12234
 Kr⁸⁸, dosimetry method 4=28076
 Kr⁹⁰, 33 sec. decay 4=22067
 Kr and Xe isotopes from U fission by 680 MeV protons 4=6401
 LiF surface fission-fragment tracks and directional effects 4=28511
 Mg²⁸, from Sb, Bi, reacts. with protons, 660 MeV 2=20689
 Mg²⁸, from Sb, Bi, reacts. with protons, 660 MeV 3=8150
 Mg²⁸, by slow neutron fission of U²³⁵ 1=3472
 Mo⁹⁹, yields from U^{235,238} fission by 14 MeV neutrons 0=4139
 MoS₂, crystal imperfections prod. by collimated beam in crystal plane 4=12820
 Na²⁴, from Cu, Sb, Sn, Bi reacts. with protons, 660 MeV 2=20689
 Na²⁴, from Cu, Sb, Sn, Bi reacts. with protons, 660 MeV 3=8150
 Na²⁴, from proton fission of U and Au 0=13298
 Ni⁶⁶, by slow neutron fission of U²³⁵ 1=3472
 in NiBr₂, track enlargement by moisture 4=22650
 in NiCl₂, track enlargement by moisture 4=22650
 Np²³⁷, anisotropy, var. with incident n energy 4=12290
 P³², in atmosphere 0=14321
 P³², from Cu, Sb, Bi reacts. with protons, 660 MeV 2=20689
 P³², from Cu, Sb, Bi reacts. with protons, 660 MeV 3=8150
 Pb fission, fragment energy distrib. 2=16445
 Pd¹¹², from Ra²²⁶ + p, range and yield 0=17632
 Pu²³⁹, eta det., reactivity coeff. meas. 2=10154
 Pu²³⁹, fission fragments, mass distribution 1=743
 Pu²³⁹, fission, yields of Ru^{103,106} 2=1939
 Pu²³⁹, in irradiated U, in BR1 at Mol 2=6069
 Pu²³⁹, neutron-induced, fission neutron spectra 1=5947
 Pu²³⁹, in spectra, thermal in fission 4=3715
 Pu²³⁹, thermal fission, Xe¹³⁵ yield 1=17178
 Pu²³⁹, yields and kinetic energies 1=12232
 Pu²⁴⁰, prompt n no., 3.6, 15 MeV incident n 4=12295
 Pu²⁴⁰, spontaneous, fission neutron spectrum 1=5947
 Rb^{82,83}, identification and half lives 1=666
 Rh¹⁰² in air, 1952-8, rel. to explosions 3=9058
 Rh^{107,108}, from U 2=20539
 Ru^{107,108}, from U 2=20539
 S³⁵, in atmosphere 0=14321
 Sb, neutron-rich isotopes, from U 2=5873
 from Sb, by 660 MeV protons 1=17176
 Sb¹²⁷, fractional independent yield meas. 4=19843
 Si³¹, from Sb react. with protons, 660 MeV 2=20689
 Si³¹, from Sb react. with protons, 660 MeV 3=8150
 Sm¹⁵¹, total cross-section meas. by Oak Ridge chopper 4=17173
 Sn, neutron-rich isotopes, from U 2=5873
 Sr⁹¹, from proton fission of U and Au 0=13298
 Sr⁹¹, from Ra²²⁶ + p, range and yield 0=17632
 T production from U 0=20511
 Tc accumulation in reactor 4=1163
 Th, by 14 MeV neutrons, ang. distrib. of products 2=14155
 Th, by 600 MeV protons, ang. distrib. 1=2249
 Th²³⁰, anisotropy, var. with incident energy 4=12290
 Th²³² by α , mass, k. e. distrib. rel. to excitation energy 4=3717
 Th²³² fission products, nuclear charge distribution 1=9891
 Th²³², by 14.3 MeV n 4=12293
 Th²³², fragments, ang. anisotropy 2=8021
 Th²³² fragments, ang. anisotropy 3=6314
 Th²³², by n, ang. distrib. of radiation, calc. 4=19840
 Th²³², by n(14 MeV) or γ (\leq 90 MeV), ang. var. 4=9577
 Tl fission, fragment energy distrib. 2=16445
 U, ang. distrib. of photofission fragments 1=8801
 U-fission alloys containing Tc, phase relns. 3=5130
 U fission, by protons, mass and charge distrib. 1=5946
 U fission by protons, product nuclear charge and formation cross-sections 3=15249
 U, by 14 MeV neutrons, ang. distrib. of products 2=14155
 U, neutron-fissioned, product-neutron spectrum 1=17160-1

Nuclear fission—contd
products—contd

U oxides, neutron irradiated, stored energy release 2=6393
 U, by p, ang. correls. bet. α 's, p's and heavy fragments, recoil effect 4=19850
 U, particle tracks in mica, fossil 3=6948
 U photofission, ang. distrib. of products 1=2248
 U, recoil-labelling of ruthenocene-Ru¹⁰³ by fragments 1=20736
 U salts, nonirradiated, natural and depleted, det. of products 2=5987
 U, by 660 MeV protons, ang. distrib. 1=19553
 U, by 660 MeV protons, ang. distrib. 3=4679
 U ternary fission by neutrons, kin. energy of fragments 3=15240
 U²³³ by α , mass, k. e. distrib. rel. to excitation energy 4=3717
 U²³³, eta det., reactivity coeff. meas. 2=10154
 U²³³ fragments, range and kinetic energy distributions 1=5948
 U²³³, neutron-induced, fission neutron spectra 1=5947
 U²³³, by neutrons, directional anisotropy 1=19544
 U²³³, by neutrons, directional anisotropy 2=8020
 U²³³, yields and kinetic energies 1=12232
 U²³⁵, β -decay of products, chain length 3=2510
 U²³⁵, Cm²⁴⁴ ionization along track 4=24955
 U²³⁵, energies 2=16094
 U²³⁵, excitation energy and deformation of fragments 1=7409
 U²³⁵ film, by n, mass spectrometer obs. 4=28078-9
 U²³⁵, fission fragments, mass distribution 1=743
 U²³⁵, fission neutrons spectra 3=12715
 U²³⁵ fission, yields of Ra^{103,106} 2=1939
 U²³⁵, fragment kinetic energy 2=1940, 8019
 from U²³⁵, fragment kinetic energy 4=3714
 U²³⁵ fragments, neutron emission 3=12713
 U²³⁵, γ -energy production by thermal neutrons, calc. 1=19572
 U²³⁵, gas yield, rel. to neutron flux 4=3719
 U²³⁵, interact. with materials, electron micr. study 2=19131
 U²³⁵, light fragments, energy spectrum 1=19554
 U²³⁵, mass-distribution and kinetics, thermal-neutron induced 3=6313
 U²³⁵, mean primary charge determ. 4=22247
 U²³⁵, negative ion prod. in gases 2=22862
 U²³⁵, neutron age in hydrogenous substs. 2=18127
 U²³⁵, neutron emission, mean number 2=1941
 U²³⁵, neutron-induced, fission neutron spectra 1=5947
 U²³⁵, neutron-induced γ -quanta 3=15242
 U²³⁵, by neutrons, light fragments 2=18366
 U²³⁵, number of neutrons emitted 4=25442
 U²³⁵, by thermal or 15 MeV neutrons, comparison 2=20687
 U²³⁵, by thermal n, n spectra and ang. distrib. 4=19851
 U²³⁵, by thermal neutrons, cumulative yields of heavy fragments 2=14157
 U²³⁵, by thermal neutrons, kinetic energies of products 1=12231
 U²³⁵, by thermal neutrons, number of neutrons emitted 4=19853
 U²³⁵, by thermal neutrons, search for H⁵ 4=19852
 U²³⁵ triple fission, energy distribution 1=3475
 U²³⁵, yields and kinetic energies 1=12232
 U^{235,238}, by 14.5 MeV n, mass distrib. 4=12292
 U^{235,238}, Pu²³⁹, by fission n, mass distrib. 4=12291
 U²³⁶, β -disintegr. per fission rel. to time 2=10161
 U²³⁶, neutron no. emitted in symmetric fission region 3=2509
 U²³⁶, neutron yield for symmetrical fission 2=20693
 U²³⁶, neutron yield for symmetrical fission 3=8151
 U²³⁸, activation measurements, background detm., in γ -coincidence technique 3=1397
 U²³⁸, fission fragments, mass distribution 1=743
 U²³⁸, fission by neutrons, fragment kinetic energies 2=14154, 16446
 U²³⁸, by γ , rare earth yield 4=9586
 U²³⁸, induced by 3 MeV neutrons, anisotropy 2=22859
 U²³⁸, by n and γ , independence of k. e. and ang. distrib. 4=6398
 U²³⁸, by 1.5 MeV n, independence of mass distrib. and saddle point characts. of nucleus 4=6399
 U²³⁸, photofission fragments, for E γ (max) = 17.5, 30, 50 MeV 3=15248
 U²³⁸, prompt n, var. with incident n energy 4=12294

 Po^{212m} , shell-model calc. 2=18269
 Rh^{102} isomeric state 1=13755
 Ru^{99} , with 227 keV γ , from $\text{Mo} + \alpha$, 22MeV 4=12153
 Sb^{118m2} 2=16331
 Sb^{122} 3=10263-4
 Sb^{122m} , isomeric transit. 2=5861
 Sb^{122m} , isomeric transitions 4=3572
 Sb^{126m} , prod. by $\text{Sn}^{124} + \alpha$ 2=1930
 $\text{Sc}^{44, 44m}$, produced by He-bombardments 4=9422
 Se^{50} 0=456
 Se^{73} , isomeric pair, scintillation spectrometry study 1=8642
 Sm^{143m} , prod. and props. 0=11336
 Sm^{143m} , 137 sec 0=5728
 Sn^{113m} 0=15534
 Sn^{113} , M3 isomeric transit. 3=383
 Sn^{119} , excited in $\text{In}^{119}(p, n)$ reaction 4=22035
 Sn^{119} , isomer shift 2=5790

Nuclear isomerism—contd

- Sn¹¹⁹ in metallic rigid soln., γ -transition, 23.8 keV isomer shifts rel. to matrix dynamic props. 4=25811
- Sn¹¹⁹, shift, and deformation 4=19693
- Sn^{123m, 125m}, prod. by Sn¹²⁴ + α 2=1930
- Sr^{87m}, decay, 0.65% K-capture branch 0=20392
- Sr⁸⁹, search for 10 day isomer 2=20538
- Ta^{182m}, 16 min, decay scheme 1=3404
- Tc^{94m}, 4.5 hr, decay 2=1840
- Tc^{95, 97}, decay schemes 0=1377
- Tc^{99m}, decay rate, effect of compression in Tc metal, calc. 0=5718
- Te¹¹⁵ or ¹¹⁹, with 284 keV γ , from Su + α , 22 MeV 4=12153
- Te¹¹⁹ 0=20389
- Te¹¹⁹ 2=14001, 14066
- Te^{127, 129, 121}, chemical separation 4=7780
- Te^{127, 129}, separation in different chemical media 4=30915
- Te^{127m}, prod. by Sn¹²⁴ + α 2=1930
- Te^{133m}, props. 0=11336
- Th²³⁴, 24 day, decay 3=15158
- Ti^{45m}, by Sc + p 1=19353
- Tl^{194, 195, 198} 0=7514
- W^{180m}, by Ta + p 1=19353
- W¹⁸³ 5.3 sec isomer 1=8632
- Y^{88, 90}, new isomers, decay schemes and periods 1=10973
- Y⁸⁸, millisecond decay 3=15134
- Y^{88m}, formation from (n, 2n) reaction 1=19496
- Y⁹⁰ 1=19375
- Y⁹⁰ isomeric state 1=12184
- Y⁹⁰, 3.14 hr isomer 1=10974
- Y^{90m} 1=19374
- Y^{90m}, 3.1 hr, by neutron capture in Y⁸⁹ 1=12185
- Yb¹⁷⁴, by n irradi. of Yb metal 3=4579
- Xe^{131m}, search for double-quantum emission 0=11373
- Xe^{135m}, props. 0=11336
- Y^{87, 87m}, produced by He-bombardment 4=9422
- Y^{90g, 90m}, ratios from Rb⁸⁹(α , n) and Y⁸⁹(d, p) 4=17197
- Yb^{169, 175, 177}, Nilsson level-schemes 1=8600
- Yb^{169, 175, 177}, decay schemes 2=18275
- Yb^{169m, 175m, 177m} 0=17524
- Zn⁶⁵ 1=648
- Zn⁷¹, decay schemes 2=391

 dynamic nuclear polarization 2=22711
 dynamic nuclear polarization in solids 1=20248
 dynamic polarization by thermal contact of spin systems 1=7797
 dynamic polarization by thermal mixing between 2 systems of spins 3=25581
 dynamic proton polarization, in n-irradiated polyethylenes 4=1899
 effect of electrons of neighbouring molecules on resonance 0=7455
 effect of molecular shape on solvent shifts 1=15909
 effects of strong elec. field on molecules 3=6419
 8-eicosanol, proton resonance, rel. to dielec. relaxation 0=13894
 electric field effects, in crystals 3=20666
 electric model representation of effects 1=16604
 electrolyte solutions, spin-lattice relaxation, theory 1=18435
 electrolyte solutions, spin-lattice relaxation, theory 3=149
 electrolytes in 50% dioxane-water mixtures 4=203
 electron coupling of nuclear spins 0=17784
 electron coupling of nuclear spins 3=8385
 electron-nuclear double res., for F-centre electrons 2=14474-5
 electron nuclear double resonance 0=10242
 emission and absorption lines due to damping by coherent radiation 1=8396
 enhancement in 4-level system 3=22490
 epichlorohydrin, spin-spin coupling 1=19662
 epoxides 0=11539
 epoxides, substituted, n. m. r. spectra 4=28262
 estimation of small splittings from wiggle-beat patterns 1=14099
 ethane, C¹³-H and H-H nuclear spin coupling 1=17346
 ethane, liquid, proton relax. and self-diffusion 2=21924
 ethane, liquid, proton spin-lattice relaxation 3=18835
 ethane, pure and with O₂, proton spin-lattice relax. 1=18476
 ethanes, substituted, conformational equilibria 2=16562
 ethanes, substituted, proton-proton coupling const. in H-C-C'-H' groups, temp. depend. 0=17784
 ethyl acetylene, proton resonance, proton-proton coupling consts. 0=17783
 ethyl acrylate, spectra analysis 1=20254
 ethyl alcohol in HF solution at -75°C 1=11767
 ethyl alcohol, proton spin-spin coupling constants 0=4226
 ethyl ammonium ion, double resonance 3=12864
 ethyl benzene, spin-lattice relax. meas. 3=23912
 ethyl malonate, CH₃ proton line-width, effect of adding piperidine and its benzoate 4=208
 ethyl mercaptan, proton resonance, proton-proton coupling consts. 0=17783
 ethyl phosphate, in earth's field 3=20021
 ethylene, C¹³ or D substituted, proton reson. 2=16561
 ethylene, C¹³-H and H-H nuclear spin coupling 1=17346
 ethylene, pure and with O₂, proton spin-lattice relax. 1=18476
 ethylenes, monosubstituted, spin-spin coupling constants 1=17347
 ethylenes, substituted, proton n.m.r. shifts 1=7489
 ethylvinylketone, proton mag. res. 3=2657
 exchange interacting nuclear spins 2=20865-6
 excitation by e.s.r., review 4=1896
 F-centre in alkali halides, elec. field gradient 4=26448
 F-centre in alkali halides, ENDOR spectrum 4=26447
 fast adiabatic passage, meth. 2=3182
 ferro- and antiferromag. materials, relaxation, review 3=1198

Nuclear magnetic resonance and relaxation—contd

ferroelectric cpds., temp. depend. 1=11496
 ferroelectric K₄Fe(CN)₆·3H₂O, proton resonance 1=20274
 ferromag. alloys 3=8729
 ferromag. subs., spin-lattice relax. 3=6754
 ferromagnetic alloys, d-band structure 3=10622
 ferromagnetic alloys, n.m.r. satellite lines 2=14843
 ferromagnetic and antiferromagnetic crystals, spin interactions 0=13888
 ferromagnetic materials, rel. to external magnetic field 3=23257
 ferromagnetic metals, transient nuclear excitation 1=6421
 ferromagnetic powders, rel. to domain characterizations 3=8672
 ferromagnetic substances 4=28889
 ferromagnetics, deformed, rel. to domain structure stress changes 4=10338
 ferromagnetics, domain-wall enhanced, absence 4=22457
 ferromagnetics, domain wall forbidden transitions 4=10337
 ferromagnetics, effect of conduction electrons 4=13331
 ferromagnetics, enhancement of n.m.r. 2=14844
 ferromagnetics, without external field 4=1893
 in ferromagnetics, meas. by frequency modulated spectrograph 1=16603
 ferromagnetics, origin of line width 1=3945
 ferromagnetics, spin-lattice 3=18137
 ferromagnetics, spin-lattice relax. 2=10712
 ferromagnetics, spin-lattice relax. in Bloch walls, mech. 2=4270
 ferromagnetism, nuclear, in rotating plane of reference 2=11815
 ferromagnets, nuclear acoustic paramagnetic resonance 3=20592
 ferro- or ferrimagnets, anisotropy of hyperfine interaction 2=12642
 flowing liquid apparatus, with weak fields 1=12904
 flowing-liquid proton-reson. arrangement, stimulated emission 1=4358
 flowing liquids 0=16674
 in flowing fluids 1=12907
 flowing liquids, absorption line amp., flow-rate depend. 0=5036
 in flowmetering 0=929
 fluctuating field effects and ortho-para conversion 3=15379
 fluctuations, mag., as noise generator 4=754
 fluids, effect of molec. orientation in elec. field 3=14188
 fluids flowing in cylindrical tube 1=18431
 fluids, spin relaxation, momentum dependent interaction 4=8256
 fluorides, iron-series, hyperfine effects 3=15955
 fluorine nuclei, anisotropy of chemical shift 3=25590
 fluorinated olefins, cis and trans CF₃ groups 4=17316
 1-fluoro, 2, 4-dinitrobenzene, H¹ and F¹⁹ spectra 1=17357
 fluorobenzene, Earth's field proton free-precession signal 2=14331
 fluorobenzene, J coupling theory 3=14790
 fluorobenzene, spin-lattice relax. meas. 3=23912
 fluorobenzene, spin-rotation, resonance temp. var. 3=6421
 fluorocarbons, relative signs of F coupling consts. 3=15377
 fluoropropenes, chem. shifts and spin-spin coupling const. temp. dependence 4=20107
 2-fluoro-3-chloropropene-2, cis and trans, spin-spin coupling consts. 2=20874
 fluxmeter for mag. field meas., using n.m.r. 4=14849
 foreign mag. nuclei, effects, theory 1=10189
 formamide, proton relaxation times in r.f. field 0=5035
 formation of complexes by H-bonds, study 2=20867
 formyl cpds., C¹³ splittings 2=3786
 free, in inhomogeneous mag. fields 3=21994
 free radical in benzene soln., triple resonance 2=23011
 free radical solution, Overhauser effect and mol. motion 4=24245
 free radical solutions, Overhauser effect and relaxation in weak fields 3=23910
 free radicals, rel. to negative spin densities 4=9763
 free radicals in soln. det. by inverted Overhauser effect 4=25733
 free radicals in solution, dynamic polarization of nuclei 1=12311
 frequency-pulling in n. m. r. absorpt. expts. 4=5835

Nuclear magnetic resonance and relaxation—contd

- furan, high-resolution, analysis 3=8301
 gas compressibility meas. 1=8146
 gas molecules spin relaxation, theory, strong-collision limit 4=25740
 gases, diamagnetic susceptibility 2=1209
 gases and liquids, electric field effect 4=18252
 gases and liquids, nuclear spin relaxation 1=9410
 gases at moderate pressures, collision-narrowing technique 4=3198
 gases, nucl. spin relaxation rate, proposed detection of nucl. elec. dipole moments 0=5659
 gases, press. effects on proton resonance 2=16556
 gases, relax., rel. to intermol. forces 3=14222
 gases, temp.-dependent chem. shifts 1=17354
 gaussmeter, in magnetic field time change measurement 1=10760
 glasses, water content determ. 1=6436
 glycerides, melting and freezing behaviour 2=22098
 glycerol, glassy and crystalline, proton mag. spin relaxation 3=23250
 glycerol, proton resonance, use in molec. motion studies 0=6779
 glycidaldehyde 1=6045
 glycine, 77°-239°K 2=10721
 guanidinium Al sulphate hexahydrate, H positions 1=4059
 gypsum, double pulse transients 2=23723
 gypsum, narrowing by rot. r.f. field 4=4420
 gypsum plaster, stiffening, n.m.r. study 1=10225
 gyroscope, sensitive to continuous mag. fields 4=30074
 halogenated propenes 1=11123
 1-halonaphthalenes, external spin-orbit coupling in soln. 3=2608
 halo-perfluorobenzenes, F¹⁹ shielding with π -electron distrib. 4=30480
 head, crossed-coil, r.f., u-mode balancing method 3=9960
 14-heptacosanol, proton resonance, rel. to dielec. relaxation 0=13894
 heptane, spin-lattice relaxation time 1=8136
 heterocyclic cpds., solvent effects on proton resonance 0=7806
 hexachlorobenzene quadrupole reorientational motion 0=18234
 hexamethylbenzene, proton resonance at low temps. 2=8684
 hexamethylenetetramine, proton resonance 2=14856
 hexamine complex salts, proton resonance 1=9073
 hexane, spin-lattice relaxation time 1=8136
 high level oscillator 1=5605
 high polymers 1=15165-7
 high polymers, T₁ temp. dependence 1=14830
 high-resolution, analysis 2=14326
 high resolution, by second r.f. appln. 3=20016
 high-resolution spectroscopy, side-band method 2=22350
 high-resolution studies, frequency-stabilized Pound-Watkins spectrometer 1=3073
 high resolution, temperature-controlled permanent magnet 0=15108
 hydrate crystals, H₂O flip motion, first and second moments effect 3=23268
 hydrate crystals, line splitting, effect of vibrational motion of H₂O mol., theory 4=23059
 hydrate crystals, structural information 3=8728
 hydrated Na tetraborate minerals 3=15963
 hydrates, proton resonance study by spinning crystal technique 0=16191
 hydration of cations 0=3546
 hydrocarbons, ring, condensed, ring current shifts 2=14328
 hydrocarbons, saturated gaseous, screening constants 4=1311
 hydrogen, bonding and n.m.r. 2=10283
 hydroxyl and hydromium ions, chemical shift 2=1169
 hydroxy-benzenes, proton chem. shifts 3=4781
 hyperfine interaction due to electrons with large g-factors 2=2306
 hyperfine interaction Hamiltonian 0=17698
 hyperfine interaction and Knight shift 0=16185
 ice, crystal nucleation, proton resonance study 2=6784
 ice, nuclear spin state 2=14847
 ice, proton reson., rel. to lattice defects 3=10644
 ice, pure and doped, proton resonance 1=11498
 ice single crystal 1=12572
 indene, by proton-proton decoupling 2=14327

Nuclear magnetic resonance and relaxation—contd

- indophenol, apparent molecular asymmetry 3=20003
 INDOR expts. using two frequency synthesizers 2=23004
 inertial mass anisotropy detection 1=4245
 intensity sum rule 2=14324
 intermolecular dipole-dipole interact., contrib. 3=17616
 internal mag. field in iron and Fe alloys, meas. 1=17949
 intra and intermolecular interactions, H₂ bonds, π effect 0=505
 iodobenzene, C¹³ resonance 3=10543
 ionic crystals, overlap model calc. 1=14817
 ionic crystals with paramag. atoms, relax., rel. to diffusion barrier 2=14846
 ionic crystals with paramag. atoms, relaxation, rel. to diffusion barrier 3=0764
 ionic crystals, spin-lattice relax. 2=23710
 ionic crystals, spin-lattice relaxation 3=8758
 ionic crystals, spin-lattice relaxation, applic. cubic lattices 0=10244
 isobutane, proton-resonance 4=30073
 iso-butyl bromide, liquid, proton resonance 0=5039
 iso-butyl bromide, proton resonance in crystals and super-cooled liquid 0=3139
 isopropyl cpds., types A⁰B, A⁰BX 3=10542
 isopropylquinone, n.m.r. spectrum, electron transfer effects 4=17313
 isotope effects in high-resolution n.m.r. 0=7800
 isotropic proton hyperfine interaction and props. of CH bond 4=6647
 Knight shift, in alloys, theory 0=4526
 Knight shift, anisotropic, crystal symmetry dependence 4=26445
 Knight shift, of impurities in metals 0=4525
 Knight shift in metallic systems 3=8729
 Knight shift, oscillations 2=18958
 Knight shift oscillations 3=20675
 Knight shifts in intermetallic cpds., large anisotropic shifts 1=9069
 lead tetraethyl 1=6047
 ligand nuclei in transition ion complexes, hyperfine interactions 4=25718
 line broadening and shifting by optical pumping 1=7442
 line shape analysis by lattice harmonics 3=5047
 line shape correction for instrumental broadening 2=16081
 line-shape functions 1=12247
 line shapes, modulation broadened, moments correction 4=8964
 line shapes, theory 2=4279
 lineshape rel. to coupled nuclear spin, theory 4=9775
 liquid crystals, proton resonance rel. to order 2=49
 liquid with molecules having four spin- $\frac{1}{2}$ nuclei, calc. 3=147
 liquid crystals and their solns., theory 4=18179
 liquids, anisotropic, with axial symmetry 3=5452
 liquids, diamag., mobile, spin-one-half relax. 3=23912
 liquids, dipolar broadening 0=19169
 liquids, dipolar h.f.s. with strong correlation-time narrowing, elec. field effects 2=19583
 liquids, dynamic polarization in high mag. fields 4=24243
 liquids, effect of electrostatic interactions on dipolar hyperfine structure 4=24246
 liquids with exchanging nuclei, transient signals 4=29647
 liquids, flowing, relax. times, large meas. 2=17485
 liquids, molecular, multiple proton resonance relaxation 1=15910
 liquids, nuclear spin echoes and molecular self-diffusion 1=12906
 liquids, principle, applications 3=14184
 liquids (pure), proton spin-lattice relaxation, temp. depend. 1=9409
 liquids, relax. of longitud. and transverse components 3=23914
 liquids, relax., molecular shape effect 3=21405
 liquids, relax., by spin-rotational interact. 3=18833
 liquids, review 1=11769
 liquids and solids, spin interaction with the environment 3=25583
 Liquids, spin-lattice relax. with quasicryst. models 4=2713
 in liquids, spin-spin and spin-lattice relaxation 1=10522
 liquids, at v.l.f. 1=12905
 liquids, weak field, spectrometer 2=1612
 liquids in weak flds, rel. to earth's fld. 3=21420
 long-range mag. shielding in molecules 1=17353

Nuclear magnetic resonance and relaxation—contd

long range proton spin coupling sign determination by triple resonance 4=5838
 long spin-lattice relaxation times meas. 1=16607
 ludlamite, p. P, low temp. var., and mag. transition 4=17698
 mag. field control of α -ray spectrograph 0=13183
 mag. field stabilization using proton resonance 0=19871
 mag. moment meas. using 3 r.f. loops along atomic beam 0=17684
 magnet construction for high resolution 0=7236
 magnet for high-resolution n.m.r. 2=15987
 magnet, stabilized power supply 4=8962
 magnet, water cooled for 1 to 100 MW power levels 2=9681
 magnetic crystals, electron-nuclei interact. 3=15732
 magnetic field contour measurement by proton resonance 1=11999
 magnetic field meas., modification for non-uniform fields 0=19864
 magnetic field meas., resonance absorption magnetometer 2=1547
 magnetic field stabilization by n.m.r. maser 1=18974-5
 magnetic field stabilizer 1=7160
 in magnetic materials 0=2429
 magnetic materials, dynamic effects 3=23246
 magnetic materials, rel. to local fields 3=3187
 magnetic materials near Curie temp., theory 3=23267
 magnetic materials, theory for large nuclei conc. 3=8726
 magnetic moment, macroscopic eqns., for interacting spins 1=14821
 magnetic screening consts., intrinsic eqns. 1=14097
 magnetic suscept. meas. technique 3=4241
 magnetometer, based on n.m.r. 2=7703
 magnetometer, for earth's field 2=4689
 magnetometer, improved probe 2=17926
 magnets, electrical current correcting shims 1=8369
 maser, flow effect, at high field strength 1=16553
 maser, for very weak fields 0=11067
 for meas. of restricted diffusion in liquids 4=5165
 meas. of T_1 by spin echoes 0=19955
 medium effects 3=12865
 medium effects on proton resonances 2=16556
 (2.2) metacyclophane, electron coupling of spins, relative signs of J^{HFI} 2=16563
 meta-dioxanes, substituted, geminal and vicinal coupling consts. 4=28261
 metal powders at low temp., method 3=17066
 metal single crystals, obs. method 2=14845
 metals, acoustic spin resonance 1=5074
 metals and alloys, rel. to electronic structure 3=23245
 metals, anomalous skin effect conditions 3=20673
 metals, rel. to atomic site elec. field inhomogeneity meas. 4=25810
 metals, diamag. shielding, on Bloch model 3=2750
 metals, diamag. shielding by cond. electrons 2=10718
 metals, effect of anomalous skin effect 1=14820
 and metals, electron struct., review 4=12669
 metals, Knight shift, effect of electron diamagnetism 4=17686
 metals, liquid and solid 0=4530
 metals, localized mag. moments meas. 3=12908
 metals, monovalent, appl. to band structure study 4=13333
 metals, non-cubic, relax. rel. to anisotropic paramag. impurities 4=10340
 metals, nuclear acoustic resonance absorpt. 3=20088
 metals, nuclear spin temp., Overhauser effect 2=18956
 metals, Overhauser effect, quantum-statistic theory 4=10341
 metals, review 2=8681
 metals, single crystals 3=21997
 metals, spin-lattice, relax., electron-electron interact. effect 3=23266
 metals, spin-lattice relax., quasiparticle picture failure 4=7341
 metals, spin-lattice relaxation, theory 0=3140
 methane, deuterated forms, solid and liq., proton spin-lattice relax. 2=10709
 methane, deuterated forms, studies using pulse techniques 2=14852
 methane, liquid, impurity-controlled proton relaxation 3=7202
 methane, proton resonance, mag. screening const. 2=6222
 methane, proton spin-lattice and spin-spin relax. 4=6651

Nuclear magnetic resonance and relaxation—contd

methane, pure and with O_2 , proton spin-lattice relax. 1=18476
 methanes, substituted, C^{13} splittings in proton resonance spectra, bond study 0=4224
 methanes, substituted, chem. shift, rel. to C^{13} -H, spin-spin coupling 3=20022
 methanethiol, p. m. r., spin-lattice relax. and chem. shift 4=18220
 methanol, p. m. r., spin-lattice relax. and chem. shift 4=18220
 1-methoxyvinyl esters, proton resonance, effect of substituent R.COO- groups 0=6276
 methyl alcohol, J coupling theory 3=14790
 methyl alcohol, transient n.m.r. signals 4=29647
 methyl anilines, C^{13} resonance, steric inhibition of conjugation 3=10544
 methyl benzoate, spin-lattice relax. meas. 3=23912
 methyl formamides, J coupling theory 3=14790
 methyl-N,N-dimethylaniline, C^{13} resonance steric inhibition of conjugation 3=10544
 methyl nitrite, barrier to rotation 0=17785
 methyl salicylate 3=8302
 methyl-substituted mols., rel. to hyperconjugation 3=739
 methylacetylenes, normal and deuterated 0=4223
 1-methyl-cis-4-cyclohexene-1,2-dicarboxylic anhydride, multiple reson. analysis 4=9774
 methylene and hydroxyl protons in 2-methyl-2-nitropropanediol-1,3 4=24249
 methylidobenzene, C^{13} resonance 3=10543
 methylnitrobenzenes, C^{13} resonance, steric inhibition of conjugation 3=10545
 methylvinylketone, proton mag. res. 3=2657
 microsystems, permanently polarized, relaxation in strong external field 1=1711
 minerals, crystal structure 4=10522
 mobile liquids where $T_2 < T_1$ 0=8672
 models, gyroscope and elec. reson. circuit 4=751
 modulation broadening of unsaturated Lorentzian lines 2=1613
 moisture meas., moving coal feed 2=7089
 molec. solids containing methyl groups, proton resonance 1=10197
 molecular beam, resonances in successive oscillatory fields 0=17861
 molecular crystals, line-widths, rel. to thermal transitions 2=783
 molecular crystals, spin-lattice relaxation 4=23063
 molecular motion in crystalline state, study of 3=13313
 molecular rotation in liquids, n.m.r. study 3=14143
 molecular structure 2=14323
 in molecular wave-function anal., valence-bond formulation 1=3564
 molecule, intensity from n equiv. protons 3=15382
 molecule in liquid, three-spin asym., relax 2=12344
 molecules, complex formation and dissociation phenomena 1=7490
 molecules, diatomic, spin-rotation and spin-spin coupling 4=3826
 molecules, direct analysis of spectrum 3=15380
 molecules, fast-exchange width 3=22596
 molecules, interpretation of high-resolution spectra 0=508
 molecules, long-range shielding 2=20869
 molecules, shielding, gauge-variation calc. method 4=20113
 molecules in solid, isotropic rotation, second moment 4=1894
 molecules, spectra calc., "direct" method 3=15381
 molecules, structure determination 3=15376
 molecules, theory of chemical shifts 3=15375
 molecules, three-spin, spin-lattice relax. 4=15380
 molecules, three spin $\frac{1}{2}$, dipole-dipole relax. 4=25738
 moment analysis of resonance signals 1=4737
 moments of resonance line-shapes, modulation-effect corrections 0=13866
 monocarboxylic acids, proton resonance 1=20276
 monocarboxylic acids, structure investigations 0=18231
 monofluorobenzene, six-spin system 0=15759
 monogermene, digermene, and derivatives, proton resonance spectra 4=17315
 monophosphine 1=12570
 multiple reson. analysis, AA'BB'MM'XX', ABCDMXY systems 4=9774
 multiple resonance, for study of exchange rates 4=13702

Nuclear magnetic resonance and relaxation—contd

- multispin systems, spectrum calc. 2=11818
 n.m.r., analytical applications 1=13193
 n.m.r. studies of intra- and inter-molecular interactions 1=12903
 narrowing by rot. r.f. field 4=4419
 Ninth Ampere Colloquium 1=4734
 nitriles, proton resonance, long-range N^{14} - H^1 coupling 1=19669
 nitroaromatic amines in soln. 4=28247
 nitrobenzene 3=738
 nitrobenzene, C^{13} resonance, steric inhibition of conjugation 3=10545
 non-adiabatic passage, in flowing liquids 0=5037
 non-equilibrium spin states, statistical mech. treatment 2=14834
 non-magnetic impurity in metal, effect of 3=8729
 non-metallic crystal, double resonance, nr. surface 3=18145
 nucl. elec. dipole moments, proposed test of existence, using nucl. spin relaxation 0=5659
 nuclear acoustic resonance, line profile 0=13125
 nuclear free-precession in very low mag. fields 4=20111
 nuclear induction head, spin generator use 2=22351
 nuclear mag. moment det., comparison with h.f.s. valves 0=5657
 nuclear magnetic acoustic resonance in cubic crystals 2=21383
 nuclear magnetic shielding in H_2 2=6221
 nuclear magnetic shielding of interacting H atoms 1=14102
 nuclear magnetization precession modes 2=12829
 nuclear polarization, "double effect" 3=3185
 nuclear quadrupole and anisotropic shift interaction effects 4=7339
 nuclear quadrupole line-splitting, energy moment method 2=16936
 nuclear quadrupole radiospectrometer 1=3072
 nuclear spin diffusion, interruption by strains 3=3186
 nuclear spin-lattice relaxation caused by paramag. impurities 0=11953
 nuclear spin-lattice relaxation, theory 2=18954
 nuclear spin-lattice relaxation time in polar liquids 0=6816
 nuclear spin relaxation by diffusion or hindered rotations, model 3=23248
 nuclear spin relaxation in paramag. crystals at low temps. 1=1278
 nuclear transfer effects in pulse expts. 1=10798
 nucleons in equilateral triangle, absorption curve 1=5833
 nylon, proton resonance 1=20265
 octahedral complexes, nuclear spin-lattice relaxation 1=3943
 n-octyl bromide, proton resonance, motion of C-Br bond 0=14667
 oils, 6 types studied 3=23913
 olefinic cpds. 1=15911
 olefins, proton resonance 1=14105
 operator techniques in phenomenological treatment 3=11120
 one-electron transfer reactions, proton linewidths 4=4690
 1,2-disubstituted ethanes, A_2B_2 spectra, analysis 4=17314
 1,2-disubstituted propanes 4=28266
 in organic chemistry, techniques, survey 3=17065
 organic cpds. containing halogens, induction studies by Cl^{35} , Br^{79} , 81 pure quadrupole resonance 0=15761
 organic cpds., long-range spin-spin interactions, rel. to hyperconjugation 0=504
 organic cpds., unsaturated and aromatic, proton resonance, effects of electron delocalization 1=2351
 organic cpds., various solvents, ionization, proton exchange study 2=1168
 organic fluorophosphates, fluorophosphonates, two radical contribs. 4=25742
 organic liquids, degassed, proton spin-lattice relaxation, press. depend. 0=16720
 organic liquids and gases, proton spectra, medium effects 0=16712
 organic liqs., relax., study using spin-echo spectrometer 4=16127
 organic phosphorous compounds, interpretation of indirect spin-spin consts. 4=15381
 organo-phosphorus cpds in earth's field 4=3915
 organo-phosphorus cpds. with n and iso- C_4A_7 groups 3=20669

Nuclear magnetic resonance and relaxation—contd

- oscillations due to r.f. field parallel to static 4=11815
 oscillator frequency control 0=3868
 oscillator, simple transistor, marginal 0=17127

 triglycine fluoberyllate, proton resonance, linewidth transitions 1=17833
 triglycine selenate, proton resonance, linewidth transitions 1=17833
 triglycine sulphate, proton resonance, linewidth transitions 1=17833
 trimethoxyboroxine, B^{11} quadrupole coupling constants 1=17348
 trimethylacetic acid 3=13313
 trimethylammonium ion in aq. soln., proton-transfer study, number of H_2O mols. involved 3=25812
 trimethylbenzenes, solid, proton resonance, methyl group reorientation 1=10197
 N-trimethylborazole, B^{11} quadrupole coupling constants 1=17348
 tripalmitrin, proton resonance, rel. to crystal structure 2=2308
 triphenyl derivatives of group IV elements, ring proton shifts 3=16637

Nuclear magnetic resonance and relaxation—contd

- triphenylcarbonium ion, proton spin-spin coupling const. 1=12313
 triple, for long range proton spin coupling sign determination 4=5838
 tris (1,10-phenanthroline) Fe II and III ions, electron transfer 3=12866
 tris (2,2'-dipyridyl)Os II and III ions, electron transfer 3=12866
 trisilane, liq., spectrum rel. to parameters 4=16129
 tristearin, proton resonance, rel. to crystal structure 2=2308
 trivinylphosphate, analysis with double-quantum transitions 4=1315
 tungsten bronzes ($M_xW_6O_{19}$) 2=4287
 Tutton salts, $K_2Zn(SO_4)_2 \cdot 6H_2O$ and $K_2Mg(SO_4)_2 \cdot 6H_2O$ 3=8740
 twin-T bridge, signal-to-noise ratio 3=517
 two-quanta transitions, linewidths 3=20668
 ultraslow atomic motions study by low-field relax. 4=28888
 ultrasonic stimulation, review 3=20665
 unequivocal problem 4=8963
 unstable fields, undistorted spectra prodn. 2=20170
 unsymmetrical three-spin spectra, field depend., calc. 0=1507
 vinyl chloride 1=11124
 vinyl cpds, proton relaxation, rel. to polymerization 3=23545
 vinyl group, analysis of spectra 2=3186
 vinyl polymerization, proton relax. study 2=23960
 vinylmethylsilanes, proton resonance 2=3782
 vinyl-type polymer chain, intramolecular second moment 1=8866
 volume magnetic susceptibility meas. 4=8888
 water, absorbed on CuO powder, ice nucleation study 2=14947
 water adsorbed on sucrose chars, proton spin polarization, 1=3953
 water freezing on ice-forming nuclei 4=13539
 water, freezing, sorbed on Si gel, phase transformations, to $-100^\circ C$ 3=19069
 water-gelatin, relaxation rel. to adsorption 4=28263
 water in HF solutions at $-75^\circ C$ 1=11767
 water interlayers in layer silicates 4=10347
 water layer adsorbed on silica gel, proton state spin-relaxation study 193° to $374^\circ K$ 4=7731
 water in organic solvents, proton exchange rates 3=9449
 water, proton resonance, elec. field effects, calc. 2=19583
 water, proton transfer 1=4360
 water, signal depend. on liquid velocity 2=13354
 water-silica gel, relaxation rel. to adsorption 4=28263
 water in silica gels 4=4720
 water sorbed on Ca hydrosilicate 3=11127
 water sorbed on cellulose, study 1=11602
 water, spin-lattice relax., quasicryst. models 4=2713
 water in synthetic substances 3=6768
 water, T_2 meas. by spin-echo technique 1=1756
 water, in zeolite, calc. 3=11126
 water in zeolites, linewidth 4=30481
 wax, liquid and solid, proton reson. 4=24250
 weakly coupled spectra, analysis 3=8302
 Wurster's blue perchlorate, n.m.r. Overhauser effect 1=17358
 Wurster's blue perchlorate, proton mag. reson. 4=28906
 p-xylene, D-substituted, proton chemical shift 1=12317
 zeolites 3=23263
 zeolitic water, spin-lattice relaxation time 3=21415
 zero splitting cone on Zeeman effect for spin 9/2 1=14831
 $A_3^*A_3^*X_2$ and A_4X_2 systems 4=3914
 A_2B_4 high-resolution, analysis 3=8301
 A_2B_2 proton n.m.r. spectra, effect of magnetic nonequivalence 1=7488
 A_3B_2 type proton resonance, spin Hamiltonian 2=2024
 A_3B_2C molecules, proton resonance, proton-proton coupling const. 0=17783
 ABX, type, field dependence and signs of coupling const. 1=3567
 AB_2X , spin coupling constants, relative sign determination 1=11122
 $A_2B_2X_2$ -type groups, analysis of n.m.r. spectra 1=3569
 Ag alloys, Knight shift 0=16186
 Ag, metallic, at $1.5^\circ K$ and room temp. 4=13351

Nuclear magnetic resonance and relaxation—contd

- Ag solid solns., Knight shifts 2=4286
 AgBr, S doped 2=16940
 Ag-Cd alloys, shifts and line width 0=21084
 $AgClO_4 \cdot 3C_4H_8O_2$, p.m.r., -66 to $+25^\circ C$, dioxane rot. 4=1900
 $Ag^{109}F$, line shape in rigid lattice 0=4528
 Al, anisotropic Knight shift in mag. field, liquid He temp. 4=28905
 Al-base alloys, solute Knight shifts 4=17692
 Al chemical shifts 0=7803
 Al, cold rolling effect 2=6349
 Al, effect of Zn, Ge impurities 4=4424
 Al, electronic structure 0=4530
 Al, Fermi surf. investig. by high-freq. surf. resistance quantum oscills. 4=12698
 Al film, Knight shift, relax., normal and supercond. 4=20608
 Al, nonresonant spin absorption 0=684
 Al, nuclear spin relax., rel. to impurity content 2=23712
 Al salt solns., and ion pair structure 4=2714
 Al, single crystals 2=14845
 Al, spin-lattice relaxation time, $1.1-4.2^\circ K$ 0=3140
 Al, superconducting, nuclear spin relax., size effect 4=8565
 Al, superconducting, spin-lattice relax. 2=2957
 Al, superconducting, spin-lattice relaxation time 0=8950
 Al thick foils, He temp. 3=20673
 Al^{27} in alumina, rel. to conc. of adsorbed oxides of Cr, Ni and Co 4=7342
 Al^{27} , diffusion narrowing ($<1300^\circ K$) 1=10190
 Al^{27} in feldspar 3=23263
 Al^{27} , in NiAl, Knight shift and line intensity 3=23270
 Al^{27} , in Ni-Al alloys, β phase, Knight shift 4=7343
 Al^{27} , polarization time in ruby 2=4268
 Al^{27} , in $PrAl_2$, mag. shift parameters meas. 4=7339
 Al^{27} , quadrupole interaction, in $MgAl_2O_4$, Mg^{2+} and Al^{3+} distrib. 1=1286
 Al^{27} , relax. in spodumene and euclase crystals 0=11956
 Al^{27} resonance in Al metal 1=14822
 Al^{27} in ruby, elec. induced 3=15962
 Al^{27} , in UAl_2 , $4-300^\circ K$, Knight shift 3=3192
 Al^{27} in UAl_2 , Knight shift 3=8730
 Al-Ag, field gradients 2=14848
 Al^{27} in Al, analysis by lattice harmonics 3=5047
 Al-Ge alloys, supercond., spin-lattice relax. 2=12827
 Al^{27} in $LaAlO_3$ 4=23074
 Al-Mg alloy, Al^{27} Knight shift and quadrupole effects 2=4282
 AlO_4 in water 1=11768
 Al_2O_3 dipole coupling, from Al^{27} resolved structure 2=6700
 $Al_2O_3 \cdot 3CaO \cdot 6H_2O$, H atom posn. meas. 4=29093
 Al-Zn, Al^{27} intensity, nuclear elec. quadrupole effects 1=20260
 Al-Zn alloy, Al^{27} Knight shift and quadrupole effects 2=4282
 Al-Zn alloy, supercond., spin-lattice relax. 2=12827
 Al-Zn alloys, ageing, crystal structure study 3=11295
 As^{75} , in AsI_3 and $AsI_3 \cdot 3S_8$, Zeeman effect of quadrupole reson. 0=686
 As^{75} atomic beams, spin and h.f.s. det. 1=8566
 AsF_5 , liquid, As^{75} res. 2=11391
 B, in alkali borate glasses, var. composition 3=18147
 B, amorphous, α and β rhombohedral 3=20678
 B compounds, solid 0=3138
 B mixed halides 0=17780
 B oxide glasses, structure 0=8256
 B^{11} in borax 3=15963
 B^{11} in crystalline borates 1=12568
 B^{11} , in lesserite 2=14851
 B^{11} , in metal hexaborides 3=20677
 B^{11} , relax. in borax crystals 0=11956
 B^{11} resonance in rare-earth intermetallic cpds 3=1197
 B^{11} in tincalconite 3=15963
 B^{11} in $CaB_2Si_2O_8$, spectrum 4=20609
 B^{11} in Na tetraborate hydrates 3=8739
 B_4H_{10} , absence of B^{10} - B^{11} coupling 2=2020
 B_2O_3 - H_2O glasses and boric acids 0=8253
 Ba bromate monohydrate, proton resonance 1=3931
 Ba halogen cpds, hydrates, proton m.r. 0=21089
 $BaBr_2 \cdot H_2O$, proton resonance 0=16190
 $BaBr_2 \cdot 2H_2O$, proton resonance 2=6709
 $BaBr_2 \cdot 2H_2O$, proton spin-lattice relax. 2=18970

Nuclear magnetic resonance and relaxation — contd

- BaCl₂·2H₂O, proton resonance 0=6281
 Ba(ClO₃)₂ hydrate, zero-field proton resonance 2=8687
 Ba(ClO₃)₂·H₂O, line splitting, effect of H₂O mol. vibrations, theory and expf. 4=23059
 Ba(ClO₃)₂·H₂O, proton spin—lattice relax. rel. to orientation and temp. 4=23071
 Ba(ClO₃)₂·H₂O, rel. to H₂O molecular motion 4=6692
 BaF₂, Na²³ and F¹⁹ relax., mech. 2=8680
 Be, Knight shift 2=14404
 Be, Knight-shift, discrepancy between calc. and expt. 4=10343
 Be, nuclear quadrupole interaction, theory 0=11960
 BeO, Be⁹ splitting, quadrupole coupling const. 1=20278
 BeO, and preferred orientation 2=23719
 Bi, electronic structure 0=4530
 Bi, liq. and supercooled 0=5038
 BiPb liquid n.m.r. 3=21419
 Br^{79,81} in NaBr, CaBr, CsBr solns. 3=14185
 Bi²⁰⁹, Knight shift and quadrupole coupling consts. 4=17693
 Br, in solutions of bromides, study of ions 1=18398-9
 Br^{79,81}, in BBr₃, quadrupole spectra 0=685
 Br^{79,81}, in ferromag. CrBr₃, meas. 4=28891
 Br⁸¹ in alkali bromides, chemical shift and spin—lattice relaxation times 4=13339
 Br^{79,81}, in AgBr, effect of lattice defects 1=3947
 Br in CrBr₃, quadrupole resonance 0=687
 Br and I in HgBr₂ and K₂HgI₄, quadrupole 0=4538
 Br⁷⁹ in NaBrO₃, double irr. effect 4=10344
 C, activated, proton resonance 1=20270
 C chemical shifts for organic mols., theory 4=12518
 C¹², giant dipole resonance 1=13785
 C¹³, chem. shifts in conjugated molecules, theory 3=17557
 C¹³ chemical shifts in CO and CO₂ 1=2350
 C¹³, intensity increase by flowing sample method 1=7181
 C¹³, isotope effect, F shielding, in C—F systems 1=12316
 C¹³, Overhauser effect 0=16716
 C¹³, satellites in oxalyl fluoride and oxalyl chloride/fluoride 3=15374
 C¹³ splittings in F¹⁹ spectra of organofluorine compounds 3=12867
 C¹³, 1,1,2,2 tetrabromoethane 3=22594
 C¹³, weak or masked signal, indirect detection 3=22594
 CF₂BrCFBrCl, time-weighted averaged approx. 4=5214
 CF₃CF₂CFICl, spin-coupling constant 1=879
 C¹³F₃COOH and CF₃C¹³OOH, INDO R spectra 2=23004
 CF₃Cl₂, liq., spin—lattice relax. of F 3=21409
 CFCIBr—CFClBr, potential energy det. 2=18483
 CH, in halogenated hydrocarbons, molec. interacts. by n.m.r. 2=14339
 CH₄, chemical proton shifts, solvent effects 1=8139
 C¹³—H coupling, non-additivity of electroneg. substituents 4=20108
 C¹³ and H¹ chemical shifts in CH₃X and CH₃CH₂X 1=12314
 C¹³ and H¹ chemical shifts in substituted benzenes 1=12315
 CHBr₃ (liquid), proton spin—lattice relaxation, temp. depend. 1=9409
 CH₃CH₂CH₂Br, analysis of n.m.r. spectra 1=3569
 (CH₃CH₂CH₂)₂O, analysis of n.m.r. spectra 1=3569
 CH₃CHF₂, n.m.r. and double resonance in gas phase 3=6420
 CH₃CN, chemical proton shifts, solvent effects 1=8139
 CHCl₃ (liquid), proton spin—lattice relaxation, temp. depend. 1=9409
 CH₂Cl₂ (liquid), proton spin—lattice relaxation, temp. depend. 1=9409
 CH₂Cl (liquid), proton spin—lattice relaxation, temp. depend. 1=9409
 CHDO, |J_{HD}| value 4=9773
 CH₃F, n.m.r. and double resonance in gas phase 3=6420
 CHF₃, liq., spin—lattice relaxation by spin—rotational interactions 1=8138
 CHF₃, nuclear relaxation mechanism 1=17349
 CHF₃, proton resonance, medium effects 3=9517
 CHFCl₂, liq., spin—lattice relaxation by spin—rotational interactions 1=8138
 CHFCl₂, nuclear spin relaxation in liquids 3=7220
 CHF₂Cl, liq., spin—lattice relaxation by spin—rotational interactions 1=8138
 CH₂FCl, liq., spin—lattice relaxation by spin—rotational interactions 1=8138

Nuclear magnetic resonance and relaxation—contd

- CH₃NH₃⁺ + OH₂ + NH₂CH₃ reaction in aq. acid, proton transfer study 0=14118
 (CH₃)₃NP group 3=4782
 (C₂H₅)₂NP group 3=4782
 CH₂O, |J_{HD}| value 4=9773
 (CH₃)₃PbH, protons, chem. shifts and spin—spin coupling 3=22602
 (CH₃)₂Si²⁹, INDO R spectra 2=23004
 (CH₃)_nSnH_{4-n}, protons, chem. shifts and spin—spin coupling 3=22602
 (CH₃)₃Sn—Li⁺, protons, chem. shifts and spin—spin coupling 3=22602
 [C(NH₂)₃]⁺ in guanidine alum. sulphate hexahydrate, n.m.r. study 3=4941
 [C(NH₂)₃]⁺ in guanidine aluminium sulphate hexahydrate, n.m.r. study 1=19923
 Ca halogen cpds. hydrates, proton m.r. 0=21089
 Ca hydrosilicates, rel. to crystal structure 3=6767
 Ca hydroxide, rel. to crystal structure 3=6767
 Ca⁴¹, in Ca(NO₃)₂ soln. 2=22709
 Ca(Al²⁷), large anisotropic Knight shift 1=9069
 CaF₂, F¹⁹ in r.f. field, rotating frame model 3=3188
 CaF₂, narrowing by rot. r.f. field 4=4420
 CaF₂, resonance saturation, rel. to spin temp. concept 1=7801
 CaSO₄·2H₂O 3=8728
 CaSO₄·2H₂O, interpair relax. 2=16934
 Cd diethyl and Cd dimethyl, rel. to electronegativity 2=2024
 Cd, double, 5¹p, level, light modulation at r.f. 4=9639
 Cd, Knight shift in alloys with GP IB and IIB metals 1=11494
 Cd single crystal, Knight shift temp. depend. in 4.2°K to 300°K range 4=28893
 Cd, supercond., spin—lattice relax. 2=7509
 Cd¹¹³ in metallic Cd, line shift, 77°-615°K 4=23066
 Cd^{111,113} in n- and p-type CdTe, chemical shift 3=3202
 Cd¹¹¹—Cd¹¹³, mag. moment ratio meas. by double resonance 0=2621
 (Ce, La)₂Mg₃(NO₃)₁₂·24H₂O, spin—lattice relax., depend on temp. 1.5-1.7°K, Ce 0.2-1% 3=20065
 (Ce, La)₂Mg₃(NO₃)₁₂·24H₂O, dynamic polarization of protons 1=10185
 Ce—Mg double nitrate crystals, proton polarization 4=13340
 Cl in molecular crystals, quadrupole 0=4540
 Cl, quadrupole Zeeman spectra, recording, r.f. spectrometer 0=17123
 Cl³⁵, in alkali chlorides, chemical shift 0=20670
 Cl³⁵, in alkali chlorides, chemical shift and spin—lattice relaxation times 4=13339
 Cl³⁵ contact shifts in CoCl₂ solutions 0=19168
 Cl³⁵, in paramag. FeCl₂, mag. field depend. 3=5049
 Cl³⁵, Zeeman transition freq., det. of upper limit for anisotropy of inertial mass 0=10561
 Cl^{35,37}, in BCl₃, quadrupole spectra 0=685
 Cl in CuCl₂·2H₂O, 1.3-4.24°K 3=20680
 ClF₃ and ClF gas-phase, F¹⁹ n. m. r. rel. to gas—liquid shifts 4=30476
 Cl³⁵ and K³⁹ or ⁴¹ in KClO₃, double resonance 3=23265
 Cl³⁷ in NaClO₃, spin—lattice relaxation 4=7344
 Cl in TiCl₂, TiCl₃, VCl₃, CrCl₂, CrCl₃ quadrupole resonance 0=687
 Co 3=23259
 Co alloys, Co⁵⁹ resonance, shifts, line-widths and intensities 1=10194
 Co, dispersed in polystyrene resonance 2=14850
 Co, ferromagnetic 0=10246
 Co, longitudinal, model and expt. 3=3197
 Co metal, f.c.c., Co⁵⁹ T₁ value at 77° and 300°K 1=20258
 Co powder, due to nuclei in Bloch walls 3=3193
 Co, powdered, external mag. field effect 2=12831
 Co, powdered, nuclei in Bloch walls 2=18959
 Co powders, Co⁵⁹ resonance, additional lines 1=1280
 Co, powders and films, various phases 1=6434
 Co powders, non-detection of Co⁵⁹ n.m.r. 1=12569
 Co, relax. rate theory 4=23062
 Co, whiskers, rel. to phase and imperfections 2=8685
 Co²⁺ ions in methanol, proton relaxation 4=18219
 Co²⁺ in methanol and methanol—water mixtures, rel. to solvation 4=14189
 Co⁵⁰ chemical shift, temp. and press. effects 4=6646
 Co⁵⁹ chemical shifts and ligand field theory 0=4229

Nuclear magnetic resonance and relaxation—contd

- Co⁵⁹, in Co—Pd alloys, dilute ferromag., giant moment meas. and calc. 4=28892
 Co⁵⁹, effect of Fe and Ni in dilute solid soln. 1=7800
 Co⁵⁹ in f.c.c. Co metal 3=1198
 Co⁵⁹, in Fe—Co alloy (4-17% Co) 2=10722
 Co⁵⁹ in ferromag. Co alloy 1=20257
 Co⁵⁹ in ferromagnetic hexagonal metal 1=20256
 Co⁵⁹, ferromagnetic, in stacking faults and twins 4=1860
 Co⁵⁹, in hexagonal crystal, use in identification of stacking faults 4=12770
 Co⁵⁹ in hexagonal and cubic Co, to 956° and 1157°K respect. 3=1199
 Co⁵⁹, teaching demonstration, by grid dip meter 3=6766
 Co⁵⁹, temp. depend. 25°-600°C 3=18150
 CoBr₂·6H₂O, proton and antiferromag. space group 4=13262
 CoBr₂·6H₂O, proton resonance at low temp., Néel temp. det. 0=3099
 Co—Cl complex formation study in methanol, -80° to +80°C 4=27201
 CoCl₂·2H₂O, proton structure 3=20853
 CoCl₂·6H₂O 2=21292
 CoCl₂·6H₂O, antiferromagnetic state, proton resonance 1=3951
 CoCl₂·6H₂O; rel. to H₂O molec. orientation 3=1201
 CoCl₂·6H₂O, 0-07° to 2-28°K 3=1207
 CoCl₂·6H₂O, proton and antiferromag. space group 4=13262
 CoCl₂·6H₂O, use of proton resonance for transition temp. determ. 4=20610
 Co and Co alloys rel. to ferromag. props. 3=1200
 Co in Co—Fe alloys, Heff distrib. 4=30742
 Co⁵⁹ in CoO, theory 1=9070
 CoF₂, Co⁵⁹ frequency shift 0=6278
 CoF₂—ZnF₂, rel. to Néel temp. 3=1055
 [Co(MeOH)₅Cl]⁺ in methanol, complex formation study, -60° to -80°C 4=27200
 Co²⁺ in MgO, double resonance 2=4278
 [Co(NH₃)₅Cl]⁺, Co⁵⁹ resonance, quadrupole effect, charge distrib. distortion 1=1287
 Co—Pd alloys, Co⁵⁹ reson. at 4.2°K 2=18960
 Cr³⁺ in corundum, cross-relax. time 2=10707
 Cr³⁺, hyperfine sublevels, relaxational transition probability 1=3946
 Cr³⁺ ions in aqueous solutions, proton and deuteron relax. times 4=21160
 Cr³⁺ spin—lattice relax. in Al₂O₃, effect of V³⁺ 3=15953
 Cr⁵³, in CrCl₃ 2=4283
 Cr⁵³, paramg. impurity in ruby, double resonance 2=13697
 Cr⁵³, in pure Cr and in Cr—V alloys 2=12832
 Cr⁵³ in Al₂O₃, electron—nuclear resonance 1=11490
 CrB, and quadrupole binding const. 3=20678
 CrBr₃, magnetizations in domains and walls 2=12685
 CrBr₃, use of spin-wave renormalization 4=15645
 CrCl₃, proton relaxation times, temp. dependence 1=4361
 Cr⁵³ in CrO₃, below 240°K 3=18149
 Cr⁵³ in CrCl₃, var. temp., mag. field, and antiferromag. 4=13341
 Cs, electronic structure 0=4530
 CsBr, interaction energy 1=14817
 CsClO₃, Cs quadrupole coupling interactions 0=9226
 Cs₂ZrCl₆, double resonance of tetravalent Pa²³¹ 1=6420
 Cu alloys, electron distrib. around solute atoms 0=13890-1
 Cu—base alloys, solute Knight shifts 4=17692
 Cu chloride dihydrate, proton resonance 0=10251
 Cu, in CuSO₄·5H₂O, 0.3-4.2°K 4=22948
 Cu dilute alloys at low temps. 0=18225
 Cu, effect of lattice deformation 0=4527
 Cu, line broadening, due to strain 0=21083
 Cu, nucl. spin absorption spectra 2=6699
 Cu sheets, anisotropy, meas. and theory 4=7345
 Cu, single crystals 2=14845
 Cu, spin—lattice relaxation time, 1.1-4.2°K 0=3140
 Cu, work hardening study 2=12860, 14897
 Cu⁶³, diffusion narrowing (<1300°K) 1=10190
 Cu⁶³, spin—lattice relaxation 0=6275
 Cu^{63,65}, ultrasonic excitation, attenuation due to nuclear spin level transitions 4=17694
 Cu—Au, Cu⁶³ intensity, nuclear elec. quadrupole effects 1=20260
 CuCl₂·2H₂O, relax., 0.5° to 1.25°K 4=13342
 CuCs(SO₄)₂·6H₂O, spin—spin relax. 2=4273
 Cu in Cu—Ni alloys, Knight shift and T₂ 4=7346

Nuclear magnetic resonance and relaxation—contd

- Cu in Cu—Pd alloys, Knight shift rel. to susceptibility, meas. 4=7347
 CuF₂·2H₂O single crystals, hydrogen and fluorine nuclei 1=20255
 Cu—Mn alloys, dependence on Mn impurity 0=10247
 Cu—Mn alloys, dilute 0=6280
 Cu(NH₄)₂(SO₄)₂·6H₂O, spin—spin relax. 2=4273
 Cu—Ni alloys, 1.4°K 3=15859
 Cu—Ni, Cu⁶³ intensity, nuclear elec. quadrupole effects 1=20260
 Cu—Ni, electronic magnetism study 1=20259
 Cu₂O, Zeeman splitting of nucl. quadrupole levels 0=6284
 Cu₃(OH)₂(CO₃)₂, azurite, proton resonance near Neel temp. 2=6711
 D, in Ba(ClO₃)₂·D₂O, quadrupole splitting 3=25589
 D in Edingtonite water of crystallization, double quanta 4=1903
 D in organic liqs., quadrupole relaxation 4=24248
 D₂, solid (33 and 55% para) 0=6279
 DF, molec. beam study, nucl. interactions 1=7492
 D₂ and H₂, solid 0=8091
 Dy, atomic beams 1=9900
 Er, atomic beams 1=9900
 Eu²⁺, in CaF₂, electron—nuclear double resonance 2=10715
 Eu²⁺, in CaF₂, electron—nuclear double resonance 4=26449
 Eu^{151,153}, in EuS, magnetization data 4=10269
 F in acidic fluoride solns., HF, HF₂ - shifts 4=23067
 F, in alkali and alkali earth fluorides solids and solns., shifts 4=23067
 F, in (CFCl)₂, C¹³ satellites and F—F coupling consts. 4=1314
 F, in CaF₂, ENDOR rel. to interact. with Eu²⁺ 4=4425
 F, in CaF₂, n.m.r. 2=14849
 F, chemical shift in fluoride crystals 1=7798
 F, chemical shift in fluoride crystals 1=10191
 F, in liquid CF₄—Ar, diffusion effects 3=21412
 F, in liquid CF₄, diffusion effects 3=21412
 F, in polytetrafluorethylene 4=23064
 F resonances in gases 3=12865
 F, solids and solns. in alkali and alkali earth fluorides, shifts 4=23067
 F spin—spin relax. in CaF₂, longitudinal, meas. 4=13335
 F¹⁹, in adducts of BF₃ 4=3916
 F¹⁹ in alkali hexafluorophosphates, dynamic structure 4=2067
 F¹⁹, C¹³ satellite spectra analysis 3=15386
 F¹⁹, in CaF₂: Sm³⁺, diffusion narrowing 2=23271
 F¹⁹, chemical shift in KHF₂—H₂O and KHF₂—KF—H₂O 1=6874
 F¹⁹, chemical shift in KHF₂—H₂O and KHF₂—KF—H₂O 1=10523
 F¹⁹ in fluorinated aromatic cpds. 1=11127
 F¹⁹ in neutron-irradiated teflon 0=4529
 F¹⁹ nuclei in Ag₂F, spin—lattice relaxation 1=9063
 F¹⁹ in powdered MnF₂, h.f. structure sensitivity 0=3107
 F¹⁹, resonance in fluorocarbon metallic cpds. 2=2021
 F¹⁹, in SF₆, isotope effects of S^{33,34} 4=3911
 F¹⁹ shift in CoF₂ 0=18226
 F¹⁹, in SiF₄, isotope effect of Si²⁹ 4=3911
 F¹⁹ spectra of phosphorus (V) fluorides 0=17781
 F¹⁹ spin echo in field of paramag. Gd³⁺ (0.01%) in CaF₂ 4=4421
 F²⁰, by polarized neutron capture and β-decay anisotropy 4=3541
 F¹⁹ in BF₃, ClO₃F, interpretation 4=9768
 F in Ca₂F(PO₄)₂, line shape 4=28895
 F¹⁹ in CeF₃, absorpt. line, mag. shielding transition 4=23068
 F¹⁹ in (glycine)₂BeF₄, and BeF₄ ion hindered rot. 4=10115
 F¹⁹, in KCoF₃, isotropic hyperfine interact. 4=13343
 F¹⁹ in KMnF₃, u.s. modulation 4=20614
 F¹⁹ in KrF₄ 4=20612
 F¹⁹ in LiF, frequency dependence of relaxation time 0=4524
 F¹⁹, in MgF₂, polycrystalline, by spin echo 3=8732
 F¹⁹ in MnF₂ 0=13893
 F¹⁹ in MnF₂, elec. shift of hyperfine interaction 4=26450
 F¹⁹ in MnF₂ near Néel pt. 3=3195
 F in NH₄F solns., var. conc. 4=23067
 F¹⁹ in NiF₂, n.m.r. in domain walls 1=6435
 F¹⁹ in ONF, chemical shift 3=10540
 F¹⁹ in UF₆ 3=23256
 F¹⁹ in XeF₄ 4=20613
 F¹⁹ in XeF₄, anisotropy of shift tensor, -110°C 4=7348

Nuclear magnetic resonance and relaxation—contd

- F^{19} in XeF_4 , chemical shift 3=12868
 F^{19} in XeF_4 -HF, liquid, width independence of field 4=21157
 F^{19} in CaF_2 , analysis by lattice harmonics 3=5047
 F-F coupling constants 4=20106
 F-F coupling constns. in saturated organic cpds. 1=17355
 F-F coupling in sat. organic cpds. 2=10281
 Fe, dispersed in polystyrene, resonance 2=14850
 Fe group ionic crystals, with paramag. ions 1=3946
 Fe ions, in aqueous solutions, proton relax. time 0=12428
 Fe, longitudinal, model and expt. 3=3197
 Fe methyl-substituted tris (1,10-phenanthroline) 4=30478
 Fe powder, effect of external mag. field 3=1203
 Fe, powdered, Bloch wall suppression, study 3=15805
 Fe, powdered, Fe^{57} res., rel. to internal strain 2=2307
 Fe, relax. rate theory 4=23062
 Fe, resonance up to 65 000 atm 3=11123
 Fe^{57} 2=785
 Fe^{57} , absorption and Zeeman effect 0=7465
 Fe^{57} , in α - Fe_2O_3 , spin-lattice relax. 2=21387
 Fe^{57} , in DyFe garnet 2=4285
 Fe^{57} , in Fe_3O_4 , temp. dependence 3=8734
 Fe^{57} , in ferrimag. oxides, enhanced 2=16939
 Fe^{57} , in garnets of iron, rare-earths 2=6703
 Fe^{57} in hexagonal ferrites hyperfine structure 4=26335
 Fe^{57} in iron, n.m.r. pressure and temp. dependence 1=6432
 Fe^{57} , in Li ferrite and magnetite, temp. depend. 3=8733
 Fe^{57} in local field of metallic Fe 1=11495
 Fe^{57} in natural iron, in absence of external field 0=13892
 Fe^{57} , in Ni- and Ni-Fe-ferrites, pulsed meas. 4=4426
 Fe^{57} , in ordered Fe_3LiO_8 3=1204
 Fe^{57} , polarization of radiation 0=7466
 Fe^{57} , in pure Fe, fast-passage effect analysis 4=28898
 Fe^{57} in rare earth Fe garnet 3=23260
 Fe^{57} in rare-earth iron garnets 3=3196
 Fe^{57} relaxation in YFe garnet 3=23252
 Fe^{57} in unenriched Fe 1=6433
 Fe^{57} , in YFe garnet 1=7804
 FeCl_3 , aq. soln. proton spin resonance freq. 3=2140
 Fe^{57} , in YFe garnet 1=7805
 $\text{FeCl}_2 \cdot 4\text{H}_2\text{O}$, antiferromagnetic, proton resonance study 4=28899
 Fe^{57} in Co 3=23258
 FeF_2 , F^{19} resonance 0=10248
 Fe^{57}N , two sites 4=23073
 α - Fe_2O_3 , Fe^{57} nuclei 2=10723
 Fe_3O_4 , anisotropy of hyperfine interaction 2=12642
 $\text{Fe}_3(\text{PO}_4)_2 \cdot 8\text{H}_2\text{O}$ (vivianite) line splitting, 1° - 77°K 3=1206
 $\text{Fe}_3(\text{PO}_4)_2 \cdot 8\text{H}_2\text{O}$ (vivianite), resonance h.f.s. 1=20269
 Ga, electronic structure 0=4530
 Ga, liquid, quadrupole relaxation 3=23915
 Ga, quadrupole resonance, superconducting and normal states 0=19562
 GaAs, quadrupole splitting, rel. to electric field 3=23199
 GaAs, spin transits, due to r.f. field 2=18961
 $\text{Ga}^{69,71}$ and As^{75} in GaAs, linear Stark effect 3=8735
 Ga^{69} and Ga^{71} , in Ga-substituted YFe garnet 4=28897
 Ga^{69} and Ga^{71} n.m.r., in Ga-substituted YFe garnet 4=28897
 Ga^{71} in α - Ga_2O_3 powder, Sternheimer antishielding factor calc. 4=7349
 GaP, line-widths for $\text{Ga}^{69,71}$ and P^{31} 2=6702
 GaSb, effect of n- and p-type impurities 0=11954
 Gd^{3+} perchlorate solutions, hydration geometry 3=18832
 $\text{Gd}^{155,157}$ in GdN 4=13344
 GdAl_2 , negative Knight shift, Gd^{3+} exchange polarization 1=7524
 GdF_3 , hyperfine interaction anomalies, Gd^{3+} exchange polarization 1=7524
 Ge, rel. to cyclotron resonance saturation 3=17850
 Ge, effect of saturation of cyclotron resonance in degenerate zone 4=28430
 Ge, at low temps. 0=10227
 Ge, spin-lattice relax., meas. 2=12826
 $\text{Ge}^{73}(\text{C}^{13}\text{H}_2)_4$, and nuclear coupling 4=22425
 GeH_3PH_2 and GeH_3AsH_2 , proton resonance 3=12863
 H adsorbed in Pd, Knight shift 4=26451
 H, in adducts of BF_3 4=3916
 H, in $\text{Al}_2\text{O}_3 \cdot 3\text{CaO} \cdot 6\text{H}_2\text{O}$, H atoms position 4=4594
 H-bond studies, association shift 3=25140
 H gas, self-diffusion meas. 2=7246
 H interstitial atoms in CaF_2 , double resonance 4=28402

Nuclear magnetic resonance and relaxation—contd

- H, liquid, spin, relaxation 1=8137
 H, solid and liquid 2=780
 H, solid, nuc. mag. relax. 2=21386
 H, spin-spin resonance 2=11431
 H_2 , adsorbed, spin echo study 2=18485
 H_2 , chemical shift and localized orbitals 2=10272
 H_2 , chemical shift, 20 kg cm^{-2} , room temp., 60 Mc/s 3=10539
 H_2 , crystalline, spin-lattice relaxation 0=11586
 H_2 , gas and liquid, nuc. spin relaxation 4=2734
 H_2 gas, spin-lattice relax. meas. 3=20023
 H_2 , gaseous, rel. to pressure 3=21451
 H_2 , HD 4=6642
 H_2 , HD, and D_2 , isotope shifts due to zero-point vibration 1=14101
 H_2 -inert gas mixture, proton spin-lattice relax. 3=21450
 H_2 , liq. 0=8671
 H_2 , liquid and solid, spin-lattice relaxation 3=23253
 H_2 , mixed with other gases, proton spin-lattice relax. 2=14332
 H_2 , nuclear magnetic shielding 0=15757
 H_2 , nuclear spin relaxation 1=9424
 H_2 , proton spin-lattice relaxation time 1=15965
 H_2 , solid (67-86% ortho) 0=6279
 H_2 , solid, structural study 0=12038
 H^- ion, shielding constant 2=1970
 H^+ in urea, analysis by lattice harmonics 3=5047
 HBr, liquid, proton spin relaxation 3=21408
 $\text{H}-\text{C}^{13}$ spin-spin couplings, nonbonded, in subst. ethylenes 3=10547
 $\text{H}-\text{C}-\text{H}'$ and $\text{H}-\text{C}-\text{O}-\text{H}'$ coupling const. signs in 2-methyl-2 nitropropanediol-1,3 solutions 4=24249
 HCN, N^{14} pure quadrupole resonance, phase transition between 77-195°K 0=6283
 H_2CO , mag. hyperfine spectrum 0=20668
 HCl, liq. and gas, proton spin-lattice relax. 3=11808
 HCl, liquid and gas, proton spin-lattice relax. 3=21416
 HCl, liquid, proton spin relaxation 3=21408
 HCl polar mol., proton chemical shifts due to added gases, meas. 4=28265
 HCl solutions, p.m.r., var. conc. 4=206
 $\text{HCo}(\text{CO})_4$, proton chemical shift 2=18462
 HCrO_2 , polycrystalline, proton resonance 1=5075
 H_2 - D_2 , 3-16.4°K, and isotope separation? 4=13488
 HDO, proton resonance, spin-spin coupling const. 2=16558
 HF, molecular beam, mag. interactions 1=2347
 HF, relaxation 3=22600
 H^+ and F^{19} spin-lattice relax. in ferroelectric ammonium salts 3=23251
 H_2 and H_2 -rare gas mixtures, and ortho-ortho to ortho-para reorientation ratio 4=9706
 H_2 -He mixtures, proton spin-lattice relax. 2=17514
 H_2 - N_2 gas mixture, proton spin-lattice relax. 3=21450
 H_2 - N_2 gaseous mixtures, rel. to pressure 3=21451
 H_2 - N_2 mixtures, proton spin-lattice relax. 2=17514
 HNO_3 solutions, p.m.r., var. conc., mechanisms 4=206
 H and Nb^{93} in Nb-H system, meas. 4=17695
 H_2 -Ne mixtures, proton spin-lattice relax. 2=17514
 H_2O adsorbed on charcoal, relaxation 4=29193
 H_2O molecule in solid hydrated compounds 1=4055
 H_2O , temp. var. 4=8224
 H_2O in various organic substances 0=16719
 H_3O^+ , proton mag. shielding, orbital calc. 2=3783
 $\text{H}_2\text{O}-\text{D}_2\text{O}$, proton, relax. temp. var., mechanisms 4=21158
 $\text{H}_2\text{O}-\text{D}_2\text{O}$, relax. temp. var., mechanisms 4=21158
 HOH, second moment, calc. by averaging over fundamental oscillations 3=10538
 H_3O^+ and OH^- , proton shifts in strong acid or alkali metal hydroxide solns. 4=5212
 H_3PO_3 , aqueous, H and P nuclei 2=3785
 H_3PO_4 , splitting and widths of p reson., ~ 1G 4=1307
 H_2S , liquid, p.m.r., temp. decrease mechanism 4=205
 H_2SO_4 (liquid), proton spin-lattice relaxation, temp. depend. 1=9409
 H in ZrH, diffusion study 2=6367
 He atom, shielding const. 2=1970
 He³, adsorbed, low temps. 3=12020
 He³, adsorbed, spin echo study 2=18485
 He³, adsorbed, 2°-4.2°K, extension 3=19091
 He³ gas, nuclear polarization by optical pumping and dipolar exchange 1=1772

Nuclear magnetic resonance and relaxation—contd

- He³, gaseous, spin-lattice relaxation, 1.7-4.2°K. 3=178
 He³, liq. self and mutual diffusion 0=8882
 He³, liquid and gas, spin relaxation times 0=1068, 7022
 He³ liquid, and longit. relax. time, solid He effects 4=16316
 He³, liquid, nucl. spin relaxation, rel. to temp. and mag. field 0=19541
 He³, liquid, pulsed, spin-lattice relax., temp. var. 4=16317
 He³, liquid and solid, adsorbed, spin-lattice relaxation time 4=14492
 He³, liquid and solid, spin relaxation times 0=1069
 He³, liquid and solid state, theory 0=3699
 He³, liquid, spin-lattice relax. meas. 3=19085
 He³ liquid, spin-lattice relaxation time 0=16935
 He³, n.m. susceptibility, 4.2 Mc/s, 1°-3°K 4=14480
 He³, nuc. mag. relax. process 2=22896
 He³, 1.7-4.2°K, pulsed, and self-diffusion, density var. 4=16152
 He³, relaxation on Pyrex surface 4=7350
 He³, solid, α and β phases 3=5574
 He³, solid, β -phase, below 1°K 4=14505
 He³, solid, exchange-bath analysis 4=11453
 He³, in solid He³, spin-lattice relax. calc. 4=8551
 He³, solid, longit., bottleneck in energy transfer 4=18522
 He³, solid, nuclear spin relaxation 0=12554
 He³, solid, relaxation meas. in α -phase 4=2911
 He³, study of atomic h.f.s. 1=7431
 Hg atom, excited, effect of N₂ pressures 2=14220
 Hg diethyl, Hg-proton spin-spin coupling 0=4228
 Hg, electronic structure 0=4530
 Hg isotopes, in orienting radiation 0=1472
 Hg¹⁹⁹, chemical shifts in molecules 3=15378
 Hg¹⁹⁹, line displacement by optical pumping 1=7443
 Hg¹⁹⁹, line shift by real transitions of optical resonance 2=20739
 Hg¹⁹⁹ relax. on walls of molten SiO₂, transverse thermal relax., u. v. irrad. effects 4=24272
 Hg²⁰¹, opt. detection 0=17660
 Hg, 6³P₁ level, displacement by multiple coherent scattering 4=15282
 Hg 6³P₁ state, line width 0=17659
 Ho, atomic beams 1=9900
 Ho¹⁶⁶ atomic beam 1=7314
 I-aromatic complexes, chemical shifts 2=17487
 I, in solutions of iodides, study of ions 1=18398-9
 I¹²⁷ in alkali iodides, chemical shift and spin-lattice relaxation times 4=13339
 I¹²⁷, in AsI₃ and AsI₃. 3S₈, Zeeman effect of quadrupole reson. 0=686
 I¹²⁷, quadrupole relaxation in NaI and KI solutions 0=12427
 I¹²⁷ in Hg(II) aq. soln., exchange rate meas. 4=2142
 IF₇, liquid, spectrum explained 0=15775
 I¹²⁷ in NaI powder, axially stressed double-coil apparatus 3=7726
 In, electronic structure 0=4530
 In, liquid, Knight shift rel. to In sulphate soln. 1=4357
 In, solid, Knight shift 2=23720
 In¹¹⁵, in metal, Knight shift 1=7799
 In¹¹⁵ in noncubic environment, absence of quad. effects 4=20615
 InSb, cond. electron density at nuclei, meas. 4=22535
 InSn liquid 3=21419
 InTl liquid 3=21419
 InTl liquid n.m.r. 3=21419
 Ir, in Ir-Fe alloys, from nuclear sp. ht. data 4=3994
 K acetate, -175° to 296°C 1=20275
 K metal, K³⁹ Knight shift 1=2498
 K metal, Knight shift rel. to KCl 1=20264
 K³⁹, in metal, Knight shift 1=7799
 KBr, F-centres, double spin reson. 2=6388
 KBr, F-centres, electron-nuclear double reson. 2=12471
 KBr, nuclear spin-lattice relaxation time 1=3942
 KBr, resonance absorption of ultrasound, theory and expt. compared 1=3597
 KBr, spin-lattice relax., temp. depend. 3=11118
 KBr, with 0.1% impurity-substituted, [100] field gradients 3=18152

Nuclear magnetic resonance and relaxation—contd

- K₂C₂O₄.H₂O 3=8728
 KCl, F-centres, double spin reson. 2=6388
 KCl, F-centres, electron-nucleus double resonances 0=6273
 KClO₃, Cl³⁵ pure quadrupole resonance, 15-77°K, Cl³⁵-Cl³⁷ coupling const. 0=18232
 KClO₃, Cl³⁵ quadrupole resonance, selective spin excitation and relaxation 0=18233
 KClO₃, K quadrupole coupling interactions 0=9226
 K₂Co(CN)₆, aq. soln., K³⁹ Knight shift 1=2498
 K₂[Co(CN)₆], Co⁵⁹ resonance, quadrupole effect, charge distrib. distortion 1=1287
 K₂CuCl₄.2H₂O, electron distrib. by proton res. line distrib. 3=1208
 KD₂PO₄, deuterons, reson. rel. to H-bond jumping 2=12365
 KF, F-centres, double spin reson. 2=6388
 K³⁹F, line shape in rigid lattice 0=4528
 K₄Fe(CN)₆.3H₂O, rel. to crystal structure 4=20622
 KH₂PO₄-type crystals, absence of linewidth transition for protons 2=18971
 KI, F-centres, double spin reson. 2=6388
 KI, low mag. fields 2=18966
 KI with 0.1% impurity-substituted, [100] field gradients 3=18152
 KI, relaxation at liq. He temp. 0=4533
 KI, resonance absorption of ultrasound, theory and expt. compared 1=3597
 KI, spin-lattice relax., temp. depend. 3=11118
 KI, study of recovery from plastic deformation 2=21427
 KI, u.s. excitation 2=14853
 KMF₃ (M = Cu²⁺, Ni²⁺, Co²⁺, Fe²⁺ and Mn²⁺) F¹⁹ shift, unpaired electron, temp. dependence 4=28896
 KMnF₃, F¹⁹ h.f.s., contrib. of unpairing of 1s electrons 1=9071
 KMnF₃, F¹⁹ resonance 0=11955
 KMnF₃, interaction with antiferromag. reson. 2=2305
 KNO₃, aq. soln., K³⁹ Knight shift 1=2498
 K₂NaCrF₆, interaction of P₀ and P_π orbitals 0=18227
 KNiF₃, covalent orbitals study 3=12891
 KNiF₃, interaction of P₀ and P_π orbitals 0=18227
 KTaO₃, nucl. mag. moment of Ta¹⁸¹ 1=597
 La meta, Knight shift, 1.8 and 300°K 0=18228
 La¹³⁹, low temp. var., Knight shift 4=20624
 LaAlO₃, of La¹³⁹, Al²⁷ 4=23074
 LaB₆, and quadrupole binding const. 3=20678
 La-H system, La and H nuclei 3=20671
 La₂Mg₃(NO₃)₁₂.24H₂O, Nd-doped, nuclear polarization 4=28900
 La₂Mg₃(NO₃)₁₂.24H₂O, proton dynamic polarization 2=23722
 La₂Mg₃(NO₃)₁₂.24H₂O: Ce(0.8% of La), p polarization, 0.5-1.7°K 4=6685
 Li A-centres in KCl and KBr, ENDOR study 3=25299
 Li, anomalous linewidth 4=20618
 Li, colloidal, in LiH, double reson., nucl. polariz. 2=3815

 Mn²⁺ ion solns., p and d relax., 0.1 molar in $\frac{1}{2}$ H₂C + $\frac{1}{2}$ D₂O, temp. var. and activation energies 4=8223
 Mn²⁺ ions in methanol soln., proton relaxation 1=157
 Mn⁵⁵, in α - and β -Mn, rel. to relax. mechs. 4=20619
 Mn⁵⁵ in α Mn, 1.5° to 4·2°K 3=15960
 Mn⁵⁵, in KMnF₃, rel. to antiferromag. resonance 3=15966
 Mn⁵⁵, in KMnF₃, mixing with electronic resonance, meas. 4=28903
 Mn⁵⁵, in MnFe₂O₄ 3=15965
 Mn⁵⁵, in MnFe₂O₄, slow and fast relax. theory 4=15667
 Mn⁵⁶, atomic beams, nuclear spin 1=7315
 MnCO₃, pulling in e. s. r. 4=30737
 MnCl₂ aqueous solutions, Overhauser effect, rel. to temp. 4=11219
 MnCl₂ solns., relaxation 3=4282
 MnCl₂·4H₂O 0=10250
 Mn⁵⁵Cr₂O₄, field var., and ferrimag., cone angle 4=23019
 MnF₂, antiferromag., F¹⁹ resonance under pressure, 4·2-35·7°K 0=10249
 MnF₂, antiferromagnetic susceptibility det. 4=26353
 MnF₂, F¹⁹ electrically induced shift, rel. to domain walls 2=758
 MnF₂, F¹⁹ frequency, shift under elec. field 1=20262
 MnF₂, F¹⁹ resonance, comparison with F¹⁹ super-h.f.s. in Mn²⁺ e.s.r. in ZnF₂ 0=6272
 MnF₂, F¹⁹ resonance shifts, theory 0=1837
 MnF₂, F¹⁹ and Mn⁵⁵ line-widths, at low temp., theory 0=11952
 MnF₂, hyperfine interaction, applied field effect 1=14823
 Mn⁵⁵F₂, low temp., zero field 4=28902
 MnF₂, spin-lattice, calc. 3=18137
 MnHPO₄·3H₂O, proton resonance, no anomaly at mag. transition 1=14179
 Mn⁵⁵ in KMnF₃, antiferromag. 4=13345
 Mn⁵⁵ in KMnF₃, nuclear-antiferromag. double resonance 3=25582
 Mn⁵⁵ in Mn ferrite, spin echo obs. 4=7354

Nuclear magnetic resonance and relaxation—contd

- Mn in MnCO₃, double, antiferromag. 4=13347
 Mn⁵⁵ in MnFe₂O₄ 4=28901
 Mn⁵⁵ in MnFe₂O₄, ferrimag., meas. 4=26453
 Mn⁵⁵ in MnFe₂O₄, temp. var. 4=13290
 Mn⁵⁵ in MnFe₂O₄, temp. var., and sublattice mag. 4=13240
 Mn⁵⁵ in Mn₄N and Mn₃Ge₃ 3=15961
 MnF₂-ZnF₂, rel. to Néel temp. 3=1055
 Mn⁵⁵N, two sites 4=23073
 Mn²⁺ in Ni-Mn alloys, and Mn⁵⁵ moment 4=7353
 Mn⁵⁵ in RbMnF₃, antiferromag., low temps., freq. pulling 4=13346
 MnSO₄·4H₂O, proton resonance, no anomaly at mag. transition 1=14179
 MnSb, Sb^{121,123} and Mn⁵⁵ reson. 2=18964
 Mn₂Ge₃, mag. field effects, liquid He temps. 4=1906
 MnSO₄·4H₂O, proton resonance study of crystal structure 4=23456
 Mo^{95,97}, Knight shift 0=2180
 N,N-dimethylaniline, C¹³ resonance, steric inhibition of conjugation 3=10544
 N₂⁴ in β quinol clathrate, quadrupole resonance 0=11961
 N¹⁴, in Na azide, chemical shifts 4=7355
 N¹⁴, quadrupole spectra, in amino and amido cpds, coupling and asymmetry const. 0=21087
 N¹⁴ relaxation by quadrupole interactions in molecular liquids 3=9482
 N¹⁴, in urea crystals, quadrupole reson. spectrum, temp. depend. 0=6271
 N¹⁵ in liquids (0.36%), chemical shifts, elec. quadrupole contrib. by intermolecular rot. hindrance 4=24247
 NCl³⁵, proton r.f. spectrum, spin rotational const. 1=19661
 N₂F₂ isomers, n.m.r. and double reson. structure det. 2=16559
 NH₃, J coupling theory 3=14790
 NH₃ (liquid), proton spin-lattice relaxation, temp. depend. 1=9409
 NH₃, n.m.d.r. 4=22423
 NH₃, N¹⁴ resonance in organic exchange reaction 2=4525
 NH₄ salts, proton reson., motional narrowing and line shapes 2=4291
 NH₄⁺ reaction in aq. acid, proton transfer study 0=14117
 N¹⁴H₄⁺, INDOR spectra 2=23004
 N¹⁵H₃ and deuterio derivs., p-d coupling, isotope shifts 4=25741
 (NH₄)₂BeF₄ 0=11957
 (NH₄)₂BeF₄, F¹⁹ reson. 2=4284
 (NH₄)₂BeF₄, F¹⁹ resonance 3=3194
 (NH₄)₂BeF₄ H¹ and F¹⁹ spin-lattice relax. 2=10711
 (NH₄)₂(BeF₄)_x(SO₄)_{1-x}, temp. depend., rel. to ferroelectric props. 1=11496
 NH₄Br, Br chem. shift, spin-lattice relax. time and line intensity 2=10720
 NH₄Br, proton mag. reson. 2=10719
 (NH₄)₂Cd(SO₄)₂, temp. depend., rel. to ferroelectric props. 1=11496
 NH₄Cl, Cl chem. shift, spin-lattice relax. time and line intensity 2=10720
 NH₄Cl, proton mag. reson. 2=10719
 NH₄ClO₄ 0=11958
 (NH₄)₂CuCl₂H₂O, electron distrib. by proton res. line distrib. 3=1208
 NH₄F solns., of F, var. conc. 4=23067
 NH₄F_xAl_{1-x}(SO₄)₂, proton mag. resonance 1=14826
 (NH₄)₂Fe_xAl_{1-x}(SO₄)₂, proton resonance 1=14828
 (NH₄)₂H₂IO₆, H¹ and F¹⁹ spin-lattice relax. 2=10711
 NH₄HSO₄, H¹ and F¹⁹ spin-lattice relax. 2=10711
 NH₄HSO₄, temp. depend., rel. to ferroelectric props. 1=11496
 NH₄I, I chem. shift, spin-lattice relax. time and line intensity 2=10720
 NH₄ + NH₃ = NH₃ + NH₄⁺ exchange reaction, correlation time 3=13589
 NH₄NO₃, double resonance of N nuclei 0=11066
 NH₄NO₃, thermal transformations data 2=6762
 (NH₄)₂SO₄ 0=11957
 (NH₄)₂SO₄, H¹ and F¹⁹ spin-lattice relax. 2=10711
 N¹⁴ in MeCN, EtCN, PrCN and Me₂NCHO, quadrupole relax. 4=20104
 NN' dimethyl piperazine 1=9955
 N¹⁴ and N¹⁵, resonance in liquid nitrogen 1=13622
 N¹⁵ in N cpds, rel. molec. structure 4=30479

Nuclear magnetic resonance and relaxation—contd

- NO(SO₃)₂⁻ in dil. and conc. solutions, double resonance rel. to appd. fld. 4=28890
 NO(SO₃)₂⁻ in solution, proton resonance and e.s.r. 1=14819
 Na, electronic structure 0=4530
 Na glutamate, transitions, rigid lattice values 2=12838
 Na hypophosphite soln. 1=12904
 Na liquid alloys, Knight shift 0=16693
 Na, nonresonant spin absorption 0=684
 Na, Overhauser effect meas. at 1.5°K 4=4427
 Na, spin-lattice relaxation time, 1.1-4.2°K 0=3140
 Na²³, in aq. soln. with paramag. ions, chem. shifts 4=16128
 Na²³, in borax and tincalconite, sites meas. 3=25591
 Na²³, dynamic polarization of nucl. spins by Overhauser effect at liq. He temp. 4=15679
 Na²³ in feldspar 3=23263
 Na²³, 4²P_{3/2} excited state double resonance experiments 0=20552
 Na²³, linewidth, temp. freq. var., solid and liquid 4=1907
 Na²³ in mixed Na halides, relaxation 3=8738
 Na²³, in NaBr solns. 3=14185
 Na²³, in NaCl, effect of elastic deform. 2=786
 Na²³, in Na halides, mag. screening 3=23272
 Na²³, in NaNO₃, 2nd order quadrupole effects 0=21092
 Na²³ in Na tetraborate hydrates 3=8739
 Na²³, relax. in Na nitrate, chlorate and thiosulphate crystals 0=11956
 Na²³ in rochelle salt, quadrupole shifts, second order 3=25594
 Na₂CO₃·NaHCO₃·2H₂O, rel. to proton positions 3=8859
 NaCl, dipolar line broadening, surface effects 1=20266
 NaCl, F-centres, double spin reson. 2=6388
 NaCl, F-centres, electron-nuclear double reson. 2=12471
 NaCl, Na resonance, adiabatic demagnetization in a rotating reference system 1=9060
 NaCl, Na²³ and F¹⁹ relax, mech. 2=8680
 NaCl, Na²³ in r.f. field, rotating frame model 3=3188
 NaCl, nuclear spin-lattice relaxation time 1=3942
 NaCl rel. to phonon scattering by impurities 3=10584
 NaCl, resonance saturation, rel. to spin temp. concept 1=7801
 Na²³Cl, u.s. absorpt. effects 4=12623
 NaCl: Ca, T₁ temp. depend. 1=20267
 Na²³ and Cl³⁵ in NaCl, spin-lattice and spin-spin relax. 4=10345
 NaClO₃, Cl spin-lattice relaxation 0=4532
 Na²³ClO₃, electrically induced population inversion 4=23077
 Na²³ClO₃, quadrupole splitting, second order corr. meas. 4=23078
 NaF, Na²³ and F¹⁹ relax, mech. 2=8680
 NaF, spin-lattice relax., temp. depend. 3=11118
 NaH, F-centres, electron-nuclear double reson. 2=12471
 NaH₃(SeO₃)₂, ferroelec., p.m.r. study 1=19924
 NaI, spin-lattice relax., temp. depend. 3=11118
 NaK and NaRb, liquid and solid 0=14665
 Na-NH₃ soln., Overhauser effect, p spin lattice relax. time 4=14187
 Na-NH₃ solns., proton resonance 3=7222
 NaNO₃, Na²³ reson. 2=10724
 NaNO₃-AgNO₃, quadrupole effect, satellites intensity, AgNO₃ depend. 0=21091
 Na in NaCl, relaxation, rel. to divalent impurity ions 3=23273
 Na²³ in NaCl crystals 1=2497
 Na²³ in NaCl, rel. to γ-irrad. 4=4432
 Na²³ in NaCl with impurities, quadrupolar broadening of lines 4=28446
 Na²³ in NaClO₃, 2nd order correction of quadrupole splitting 4=20623
 Na²³ in NaNO₃ 4=1663
 Na²³ in NaNO₃ single crystals 0=13895
 Na²³ and Pb²⁰⁷ in Na_{1-x}Pb_x 3=20676
 NaSH, phase transformations 4=7511
 Na₂S₂O₈·2H₂O, p. m. r., rel. to H atom arrangement 4=7643
 Na₂S₂O₈·2H₂O, proton resonance, rel. to crystal structure 3=8848
 NaTi, rel. to crystal structure 3=11122
 Na₂WO₄, zero Na²³ Knight shift explained 0=13518
 Na₂Zn(SO₄)₂·4H₂O, use for structure calc. 4=10550
 Nb, spin-lattice relax. 2=18957
 Nb, supercond., Knight shift component separation 4=20625
 Nb⁹³⁺ in CaWO₄, model for W site substitution 4=20620

Nuclear magnetic resonance and relaxation—contd

- Nb⁹³ in Nb-Mo alloys, Knight shifts 4=7356
 Nb⁹³ in Nb-Mo alloys, Knight shift 3=8737
 Nb⁹³ in Nb-Tc alloys, Knight shifts 4=7356
 Nb-Zr solenoid, supercond., persistent current obs. 3=9685
 Nd^{143,145}, in LaCl₃, double reson. 2=23714
 Nd³⁺ in CaWO₄, Na compensated or uncompensated 4=13348
 Nd³⁺, in ethyl sulphate, cross-relax. time 2=10707
 Nd³⁺ in LaCl₃, double resonance 0=16173
 Ni, longitudinal, model and expt. 3=3197
 Ni metal, Ni⁶¹ resonance, internal field meas. 1=1281
 Ni, powdered, Bloch wall suppression, study 3=15805
 Ni, relax. rate theory 4=23062
 6 Ni salts, proton resonance, low-temp. anomalies 0=535
 Ni²⁺, in aqueous solutions, spin-lattice relax. time 1=15908
 Ni²⁺ ions in methanol, proton relaxation 4=18219
 Ni²⁺ in methanol and methanol-water mixtures 4=14190
 Ni⁶¹, in dilute Co-Ni alloys meas. 3=3199
 Ni⁶¹ in dilute Fe-Ni and Fe-Co alloys 4=20621
 Ni⁶¹, in Fe-Ni alloys, rel. to hyperfine field 3=15967
 Ni⁶¹, powder, 77°K, room temp., and moment 3=17393
 Ni⁶¹ in Al₂O₃, electron nuclear double resonance 4=7334
 NiBr₂·6H₂O, proton and antiferromag. space group 4=13262
 NiCl₂·6H₂O, antiferromagnetic state, proton resonance 1=3951
 NiCl₂·6H₂O, proton and antiferromag. space group 4=13262
 Ni-Co, internal fields 2=12649
 Ni in Cu-Ni alloys 4=7346
 NiF₂, enhancement in domain walls 3=18114
 NiF₂, F¹⁹ resonance, 4.2-298°K, mag. ordering 1=1282
 Ni(H₂O)₆·SiF₆, 0.15-4.2°K 4=23072
 Ni⁶¹ in Ni powder, saturation behaviour 3=25592
 NiSO₄·7H₂O, proton resonance and spin quenching 1=20272
 No²³, absorption line intensity rel. to impurity concentration 3=2791
 O⁶⁺ ion, shielding const. 2=1970
 O¹⁷, enriched water 2=1170
 O¹⁷ n.m.r. linewidths in org. molecules, rel. to quadrupole coupling consts. 3=22599
 O¹⁷, in paramag. MnO and CoO, meas. 4=13349
 O¹⁷, relaxation in aq. solns. of paramag. cations 2=19581
 O¹⁷, shifts in aq. solns. of rare-earth ions 2=5029
 O¹⁷ shifts caused by Cr³⁺ in aq. solns. 3=9481
 O¹⁷ in solutions, Be, Al ion coordination numbers 4=207
 O¹⁷, solvent effects and spin couplings 3=11810
 O¹⁷, in various liquids & solutions 3=148
 O¹⁷ in MgO 3=20682
 P, solid white, relaxation times 3=5050
 P³¹, in P-N compounds, chemical shifts rel. to structure 4=9771
 P³¹ in solid PCl₅, chemical shift 1=6430
 P³¹ in H₃PO₄, line broadening by paramag. ions 3=13316
 P³¹ and Li⁷, in LiMnPO₄, paramag. and antiferromag. 3=18151
 PCl₅, rotating crystal, P³¹ resonance, chemical shifts due to (PCl₄)⁺ and (PCl₆)⁻ 1=10187
 PCl₅, spin-lattice relax., rotat. sample 3=20683
 PCl₅ONPCl₅, its thio analog, P₂Cl₂ONPyCl₂NP₂Cl₃, double and P³¹-P³¹ homonuclear decoupling 4=9770
 PO₂H₂⁻, ~ 1 G 4=1309
 Pb, broadening in fine particles 3=20681
 Pb, spin-lattice relax. 2=18957
 Pb²⁰⁷, chem. shift in polar semicond. 2=8686
 Pb²⁰⁷, chemical shifts in molecules 3=15378
 Pb²⁰⁷ in compounds, chemical shifts 4=20616
 Pb²⁰⁷ in Pb alloys, Knight shift meas. 4=20617
 Pb²⁰⁷, in Pb-In alloys, Knight shifts and linewidths 4=4428
 Pb²⁰⁷, in Pb telluride, Knight shift 2=12833
 PbO₃, n.m.r. meas. of Knight shift 1=3950
 PbO-B₂O₃ glasses, structure 3=18148
 PbTe, p-type, Knight shift and large g factors of majority carriers 4=4429
 Pd₂H, feasibility of nuclear cooling 1=11866
 Pm, atomic beams 1=9900
 Pt, Knight shift, rel. to orbital and spin mag. theory 4=17699
 Pt¹⁹⁵ in powder, n.m. relax. and Knight shift, 20°-290°K 3=3201

Nuclear magnetic resonance and relaxation—contd

- Pt¹⁹⁵ in Pt 3=23255
 Pt¹⁹⁵ in Pt, rel. to spin-spin interact. 2=18967
 Pt¹⁹⁵ in Pt, 24°-299°K meas. 3=13315
 Pt¹⁹⁵ in Pt-Au, Ir solid solns., decay osc., and coupling meas. 4=13350
 Pt¹⁹⁵, in PtSn₄, Knight shift 3=5051
 PtSn₂, Knight shift, d-electron band filling 2=6706
 Rb, electronic structure 0=4530
 Rb spin relaxation induced by H₂ and rare gases 3=4723
 Rb^{85,87}, Knight shift, isotope effect 1=14824
 Rb⁸⁷, in aq. soln. with paramag. ions, chem. shifts 4=16128
 RbBr 0=4531
 RbBr, F-centres, ENDOR 3=15520
 RbCl, F-centres, ENDOR 3=15520
 RbClO₃, Rb quadrupole coupling interactions 0=9226
 Re, in Ir-Fe alloys, from nuclear sp. ht. data 4=3994
 SF₆, 2 centre-symmetrical triplets, at -60° and -90°C 3=17613
 SF₆, liquid, rel. to spin-rotational interact. 4=2715
 (SO₃)₂NO⁻ free radical, double resonance exper. 0=17777
 SbCl₅, liquid, Sb^{121,123} reson. 2=11391
 Sc metal, Knight shift, 1.8 and 300°K 0=18228
 Sc⁴⁵ in ScN 4=23076
 Sc⁴⁵, low temp. var., Knight shift 4=20624
 Se diethyl and Se dimethyl, rel. to electronegativity 2=2024
 Si, double resonance of Fe⁵⁷ and Au¹⁹⁷ atoms in, mag. moments det. 0=7458-9
 Si hydrides and deriv., rel. to coupling const. 2=14330
 Si, Overhauser effect and spin relax., and cond. electron density at nucleus 4=20244
 Si, P-doped, nuc. dynamic polarization suppression by r.f. radiation 4=28904
 Si, Raman spin-lattice relax. for shallow donors 3=11119
 Si²⁹ h.f. interaction of donor electron, double resonance technique 0=16174
 Si²⁹ in silicon, dynamic polarization at low temp. 0=21081
 SiC, n-type, ENDOR meas. 4=1888
 SiH derivs., proton and F¹⁹ chem. shifts 3=22603
 SiH₃D, estimation of small splittings 1=14099
 SiH₃PH₂ and SiH₃AsH₂, proton resonance 3=12863
 SiO₂ in water 1=11768
 Sm¹⁴³, nuclear spin det. 0=9514
 SmAl₃, Knight shift sign reversal, 77-300°K, theory 1=10192
 Sn, anisotropic Knight shift in mag. field, liquid He temp. 4=28905
 Sn, electronic structure 0=4530
 Sn(grey), Knight shift, charge carrier effective mass 1=1283
 Sn, spin-lattice relax. 2=18957
 Sn, superconducting, 1.5-4.2°K 1=2922
 Sn tetraethyl, paramagnetic proton resonance spectra 1=12310
 Sn tetraethyl and Sn tetramethyl, rel. to electro-negativity 2=2024
 Sn¹¹⁹, anisotropy, Knight shift 2=14854
 Sn¹¹⁹ in metallic tin, n.m.r. 1=20268
 Sn¹¹⁹ in metallic tin, n.m.r. 3=5052
 Sn^{117,119} in Mn₃Sn(1.5 ≤ x ≤ 1.9) 4=17701
 SnH₄, protons, chem. shifts and spin-spin coupling 3=22602
 Sr halogen, cpds, hydrates, proton m.r. 0=21089
 SrTiO₃, phase transition study 3=8791
 Ta¹⁸¹ in tantalum metal 1=7802
 Tb¹⁵⁹, in Tb powder 1=7803
 TbN, N¹⁴ reson. shift 2=12835
 Tc, Knight shift and quadrupole interaction 2=6707
 Tc, Tc⁹⁹ reson. and Knight shift 2=12836
 Tc⁹⁹ in Nb-Tc alloys, Knight shifts 4=7356
 Tc-V, Tc⁹⁹ and V⁵¹ reson. 2=12836
 Te, atomic beams, g-value 2=3461
 Te¹²⁵ in n- and p-type CdTe, chemical shift 3=3202
 Te, spin-lattice relax., n.m.r. study 2=6694
 ThAl-H and -D, p.m.r. 3=20849
 ThO₂, adsorption meas. 4=26728
 Ti hydride, nonstoichiometric, proton resonance 0=18230
 TiH, proton resonance study of structure, diffusion 1=6437

Nuclear magnetic resonance and relaxation—contd

- Tl, metallic, at liq. He temps. 2=787, 23721
 Tl salts, molten and crystalline, chemical shift 4=18218
 Tl salts, solids and aq. solns., chemical shifts in Tl resonance 1=155
 Tl salts (thallous), in soln., chemical shifts in Tl resonance 1=154
 Tl salts (thallous), Tl resonance, effects of ferricyanide and citrate ions, ion-pair formation 1=156
 Tl²⁰⁵, chemical shifts in molecules 3=15378
 TlF, double resonance 0=13883
 T₂O, T mag. moment and proton and triton relaxation time 0=387
 Tm(Al²⁷)₃, large anisotropic Knight shift 1=9069
 TmN, N¹⁴ reson. shift 2=12835
 UAl₂, Knight shift, conduction electron polarization 1=1277
 UF₆, polycrystalline 3=18153
 UO₃ crystalline hydrates, proton reson. 2=10725
 UO₄·2H₂O, proton resonance 3=3203
 V alloys with Ti, Cr, Tc, Knight shifts 3=3204
 V alloys, V⁵¹ resonance, shifts, line-widths and intensities 1=10194
 V metal, spin-lattice relaxation, departure from Korringa relation 1=1284
 V, normal and superconducting 4=29627
 V, spin-spin and spin-lattice relaxation, 20.4-292°K 1=10193
 V, supercond., Knight shift component separation 4=20625
 V⁵¹, hyperfine sublevels, relaxational transition probability 1=3946
 V⁵¹ dispersion in V₂O₅, and elec. moment 4=25264
 V⁵¹, in V, temp. depend. 25°-330°K 4=20626
 V⁵¹ and Al²⁷ in V-Al alloys 4=26455
 V(CO)₆, relaxation times 4=2709
 V-Cr alloys 4=10346
 V⁵¹ in Cr-V alloys, Knight shift, linewidth 3=8741
 V₃ (Ga, Si, Ge, As, etc.), supercond., Knight shift component separation 4=20625
 V and Mu in corundum, ENDOR 4=3959
 V₂O₃, shift and splitting of central component of V⁵¹ resonance 1=14825
 VO⁺⁺ ions, n.m.r. in aqueous solutions 3=14187
 V_{0.6-0.8}-x Tc_x Al_{0.4-0.2} (x up to 0.60), Knight shift 4=7357
 V⁵¹, in V-Fe alloys, Knight shifts 3=23141
 V⁵¹ in VN 4=23076
 V₃X intermetallic cpds., Knight shifts and susceptibilities, theory 1=5062
 V₃X (X = As, Au, Co, Ga, Ge, Ir, Pt, Sb, Si), β-W structure, n.m.r. properties 0=19561
 in XAl₂ cpds 3=8730
 XAl₂ (X = rare earth metal) n.m.r. study for conduction electron polarization 1=6431
 X (C₂H₂), proton resonances 1=6047
 Xe¹²⁹, in liquid and gaseous natural Xe 1=1758
 Xe¹²⁹ in natural Xe, liq. and gas 3=16666
 Xe¹²⁹, in solid and liq. Xe, meas. 3=18154
 Xe^{129,131}, relax. time rel. to xenon-gas density 3=23944
 Xe^{129,131} relaxation times in gas 3=1734
 XeF_n (n = 2, 4, 6) chemical shift calc. 4=9769
 XeF₂, liquid, chemical shifts 3=17617
 XeF₄, anisotropy of shielding tensor 4=23069
 XeF₄, chemical shifts and spin-spin coupling 3=17617
 XeF₄, F¹⁹ spectrum 3=15387
 XeF₄, polycrystalline, F¹⁹ mag. shielding anisotropy, sign 4=23070
 XeF₆, liquid, chemical shifts 3=17617
 XeF₆-HF, liquid, width independence of field 4=21157
 XeOF₄, chemical shifts and spin-spin coupling 3=17617
 Xe¹²⁹ in Xe gas, chemical shift 3=16667
 Xe¹²⁹ in XeOF₄, by second r.f. appln. 3=20016
 Y garnet, impure, Fe⁵⁷ relaxation invest 2=6705
 Y⁸⁹, in metal, Knight shift 1=7799
 YFe garnet, anisotropy 3=3205
 YFe garnet, containing impurities, Fe⁵⁷ relax. 2=6704
 YFe garnet, Fe⁵⁷ resonance, influence of dipolar field 1=20263
 YFe garnet, relax., rare earth impurities effect, theory 4=7315
 YFe²⁺ garnet, effect of rare earth doping 4=7312
 Yb¹⁷¹, in Yb metal and cpds., Knight shift 4=10348
 Yb(Al²⁷)₃, large anisotropic Knight shift 1=9069

Nuclear magnetic resonance and relaxation—contd measurement

- (subheading introduced in 1963)
 use of amplitude modulated r.f. field, verification 3=9962
 amplitude modulation prodn. of sidebands 3=19474
 analogue—to—digital convertor for pulsed expts. 3=24501
 apparatus for nuclear-electron double resonance at 12 500 gauss 4=24872
 autodyne detectors with crystal freqn. stabilization, analysis 4=758
 autodyne method for NMR spectroscopy 3=24495
 balanced coil for greater sensitivity for solids 3=19470
 circuit, frequency-swept n.m.r. absorption 4=21664
 control system for mag. field 4=757
 cryostat, He³ 4=24860
 cryostat and sample coil for spin-echo spectrometer 3=14793
 crystals, high-resoln., rotation technique 3=14791
 crystals, spectrometer 4=17689
 detector, autodyne, noise, white, flicker 4=755
 detector, for many-quantum transitions 4=30072
 double coil system of Fibreglass for axial stress 3=7726
 double, periodic pulsing of second freq., for relax. times meas. 4=24870
 double resonance techniques, applied to C study 4=3195
 dual-purpose spectrometer 3=24494
 g-value det. by molecular orbital theory 4=24868
 high resolution, by Overhauser or transitory selective irradi. methods 4=24869
 instrumentation, review of recent advances 3=14789
 imaginary solns. to 3-spin spectra 4=14917
 J coupling, spin echo technique 3=14790
 line width, extended samples, inhomogeneous mag. field 4=750
 liquids, diamagnetic, relaxation meas. 3=23912
 liquids, proton relaxation in weak mag. flds., recording apparatus 4=760
 magnetic field inhomogeneities reduction 3=7727
 magnetic field meas. 3=5808
 microsecond pulse, for broad lines in solids 3=14792
 modulation broadening of line shapes 4=3194
 molecules, oriented, in nematic liquid solvent 4=9776
 non-recurrent var. mag. field 4=16677
 oscillator, frequency without amplitude modulated 4=5836
 by oscillator, low frequency supergenerative 4=14918
 phase-selective X-Y recorder using electrodynamic wattmeter 4=5834
 probes and furnaces, for obs. to 1000°C 4=19248
 proton generator, earth's field, tank synchronizer 4=3202
 pulse receiver system, stagger-tuned, rel. to relaxation time meas. 4=27443
 pulsed u.h.f. apparatus 4=28901
 r.f. bridge for pulsed n.m.r. expts. 3=9961
 resonance techniques with susceptibility balances, signal-to-noise ratio 3=24497
 screening of coils, improving signal/noise ratio 4=30018
 signal enhancement, Varian A-60 spectrometer 4=30075
 signal-to-noise ratio, enhancement by continuous averaging 4=24859
 sources of error, analysis 3=17068
 spectrometer for all nuclei, frequency-swept, proton-stabilized 3=12332
 spectrometer, high-resolution 4=24873
 spectrometer, self-stabilizing using sample reference line 4=752
 spectrometer stabilized by nuclear-spin oscillator 3=14794
 spectrometer, using gated beam tube, for dispersion meas. 4=27672
 spectrometers, high-resoln., design 3=24498
 spectrometers, use of modulation techniques 3=4281
 spectrometers, resolution detm. with methyldichlorosilane 3=19471
 spin decoupler, homonuclear 4=27674
 spin-echo, Hahn-Carr-Purcell methods 4=756
 spin-echo spectrometers, for polymers 4=23064
 spin system levels, by pulse selective saturation 4=3199
 stabilization, double a.f. modulation of mag. field 4=3196

Nuclear magnetic resonance and relaxation—contd measurement—contd

- stabilized oscillator, Pound-Freeman, operation 4=753
 transients in solids, zero time resolution 3=19472
 two-phase systems, relax., spin echo method 3=4282
 two-synthesizer nuclear spin decoupling 3=12333
 vacuum and pressure valve system 4=3197
 vapour phase, simple method of study 4=759
 Varian HR60 spectrometer, spin echo attachment 3=9958
 weaker reson. det. using strong resonance, technique 4=10339

Nuclear matter

See Nucleus, theory; Quantum theory, many-particle systems.

Nuclear orientation

(Heading introduced in 1961)

- Varian V-4331A probe, var. temp. wide line insert 4=27673
 angular momentum operators, component product trace calc. 4=16672
 bombardment target dynamic polarization meas., by n.m.r. 4=19323
 in crystals, rel. to ang. distrib. of emitted γ -rays 2=23036
 in crystals, 1-phonon transitions, freq. spectrum 1=14169
 detection and production 1=8565
 "double effect" in diffusing liquid 1=16972
 double electron-nuclear resonance, nuclear transitions 4=25268
 dynamic nuclear polarization in solids 1=20248
 dynamic polarization in crystals, by electron-nuclear dipolar coupling 1=10185
 dynamic, solid-state aspects 1=14154
 free nuclear induction apparatus 4=30499
 free radical frozen solutions, dynamic nuclear polarization 4=12533
 in frozen solns., utility 1=20206
 Gorter-Rose technique, extension to all paramag. ions 1=7518
 liquids, in high mag. field 4=24243
 at low temp., review 2=1617
 methods, review 1=4827
 Mössbauer effect, conference 1=600
 Mössbauer effect, in crystal props. study 1=8876
 Mössbauer effect, intensity curve shape, unshifted-line spectrum 1=3389
 from Mössbauer effect, parity non-conservation test 4=15136
 optical pumping prod., theory 4=15296
 by Overhauser effect 1=3944
 p, in $\text{La}_2\text{Mg}_3(\text{NO}_3)_{12} \cdot 24\text{H}_2\text{O}$: Ce(0.8% of La), dynamic, from mag. resonances, 0.5-1.7°K 4=6685
 paramag. ions, by incorporation as impurities in CeMg nitrate 1=7518
 paramagnetic substances 1=14153
 polarization in β -decay, Mössbauer expts. proposed for parity and time-reversal studies 1=8635
 polarization, computation by macroscopic magnetic resonance equations 1=7796
 polarization by hot electrons 4=30498
 polarization of protons and fluorine nuclei in polymers 3=25580
 polyethylenes, n. irradi., protons polariz. 3=20064
 proton dynamic polarization of 51% 2=23722
 proton polarization in p-dichlorobenzene 1=20273
 protons in $(\text{Ce}, \text{La})_2\text{Mg}_3(\text{NO}_3)_{12} \cdot 24\text{H}_2\text{O}$, by electron-nuclear dipolar coupling 1=10185
 protons in magnetized Pd-Ni, single transmission effect for slow neutrons 2=6672
 relaxation, statistical time, random space, interactions 3=22273
 slow-neutron capture by bound nuclei, analogue of Mössbauer effect 1=5927
 solids, dynamic polarization by thermal mixing of two spin systems 4=1344
 spin diffusion and polarization at forbidden paramag. resonance 4=26372
 spin = 1 nuclei 4=17004
 Au¹⁹⁸ in Fe rel. to temp. 2=20911
 Au¹⁹⁹, alloyed with Fe, polarization 1=14155
 Au¹⁹⁸ in Fe-Ni, rel. to sign of local mag. field 4=20542
 Cd¹¹¹, γ -ray ang. correl. in Ag dilute alloys, elec. field gradient det. 1=3588
 Cd^{111,113}, optical pumping prod., theory 4=15296

Nuclear orientation—contd

- Ce^{137, 137m}, in Nd ethyl sulphate, mag. moment of
Ce^{137m} 1=2162
- Ce¹⁴¹, β -energy and ang. distrib., matrix elements in
forbidden decay 1=5859
- Ce¹⁴¹, in Ce double nitrate, intermediate-state
reorientation 3=25172
- (Ce, La), Mg₃(NO₃)₁₂·24H₂O, protons, 170 lines increase
in 3700 Oe at 1.6°K 3=20065
- Ce Mg nitrate, ordered spin T → O°K, int. mag. field
calc. 4=28317
- Co⁵⁵ 1=13684
- Co⁵⁷, in Ce double nitrate, intermediate-state
reorientation 3=25172
- Co⁵⁷ polarization in Fe metal at low-temp.,
Mössbauer effect 1=8877
- Co⁵⁸, K-capture, effects on nuc. alignment 3=17433
- Co⁵⁹ in X site of La₂Zn₃(NO₃)₁₂·24H₂O 3=8723
- Co⁶⁰ in antiferromagnetic single crystals 1=3585
- Co⁶⁰, in CeZn nitrate, effect of ionic spin-spin
interaction 1=3586
- Cr⁵¹, CeMg nitrate 1=7518
- D, μ -mesic atom, energy shift 1=13628
- Dy^{155, 157}, in Nd ethylsulphate, γ -ray ang. distrib. 1=10958
- F¹⁹, in polytetrafluorethylene, dynamic
polarization 1=14814
- Fe⁵⁷, in FeF₃, h.f.s. in paramag. and antiferromag. states,
from Mössbauer effect 1=1187
- He³, adsorbed on zeolite, from specific heat.
0.1-1.4°K 4=14506
- He³ gas, polarization by optical pumping and dipolar
exchange 1=1772
- He³, measurement, cryostat 4=11442
- Hg^{199, 201}, by optical pumping, mag. moments 2=3708
- Ho, from γ -ray anisotropy 4=17332
- Ho-In alloy, neutron transmission study 2=18511
- I¹³¹, by electric h.f.s. alignment at 0.03°K in Cu
p-iodobenzenesulphonate 1=616
- InSb, In¹¹⁵, Sb^{121, 123} polarization by d.c. 4=22462
- Ir^{192, 191m}, alloyed with Fe, polarization 1=14155
- Li, resonance study in metal 1=6429
- Li, polarization in u.v.-irrad. LiH 2=3815
- Li⁶ in (p,n) reaction 4=22109
- Mn⁵⁴ in antiferromagnetic single crystals 1=3585
- Mn⁵⁴ in CoCl₂·H₂O, γ -ray ang. distrib. 2=23687
- Mn⁵⁴ in MnSiF₆·6H₂O 2=23037
- Mu⁵⁴ in Ni, polarization, temp. var. 4=3967
- Nd¹⁴⁷, in Nd ethylsulphate, spin assignments 1=12147
- Ne¹⁸, β -decay asymmetry and mag. moment 3=17427
- Ni⁶¹, Mössbauer effect in Ni⁶⁴ host lattice 1=5830
- Np²³⁷, in cooled NpO₃Rb(NO₃)₃, α ang. distrib. 2=393
- Pm isotopes 1=8633
- Pm¹⁴⁴, in Nd ethyl sulphate, γ -ray anisotropy,
crystal fields 1=3587
- Pm¹⁴³ in Nd ethylsulphate 1=10959
- Re¹⁸⁶, alloyed with Fe, polarization 1=14155
- Sb¹²², in Si, β -decay matrix elements 1=12173
- Sm¹⁴⁹, by mag. cooling, spin assignments of low-energy
neutron resonances 3=2468
- Ta¹⁸¹, in Hf, from decay anisotropy, temp. var. 3=20069
- Tb¹⁶⁰, in Nd ethyl sulphate, γ -ray anisotropy 1=623
- Tb¹⁶⁰, in Tb, γ -anisotropy 4=17070
- V⁴⁸, alloyed with Fe, polarization 1=14155

Nuclear photoeffect

Nuclear physics—contd

Winfrith nuclear data library, July 1963, system developed for prep., storing and handling data 4=17214
Z det. for light nuclei using δ rays in emulsion 0=19989

Nuclear quadrupole resonance

(Heading introduced in 1961)

alkali iodates 1=14833
alkali iodides, quadrupole coupling 1=19702
Ampere Colloquium, Eindhoven (1962) 3=20629
Ampere Colloquium, Leipzig (1961) 3=23198
anthracene, solid solution in p-chlorobenzene 1=20277
antiferromagnets, first observation 1=7807
apparatus for freq. ~ 1 Mc/s 1=9695
 δ -benzene hexachloride, bond angles, nucl. quadrupole resonance study 3=8872
butyronitrile, N^{14} reson. 2=14861
chloral hydrate, orientational melting process 2=791, 8688
chloranil, temp. dependence of Zeeman effect 3=8743
chlorine compounds 1=7808
p-chlorobenzoic acid, Zeeman effect 1=8857
2-chloropropane, quadrupole coupling consts 4=12499
 β -chloropropionic acid 1=7808
chlorotoluenes, Cl^{35} reson. and Hammett's σ values 2=10279
coaxial bridge, high-sensitivity 3=7724
coupling constant of Cl isotopes and dipole moment of BrCl 3=25141
coupling consts. det., polycrystalline solids 4=13352
coupling consts., effects of intramolecular elec. fields in molecules 3=2659
coupling consts., solid-state perturbations 2=4293
covalent-bond asymmetries from Zeeman-split NQR 3=8744
crystals, rel. to elec. fields and elastic strains 3=3206
in crystals, magnetically dilute, rel. to symmetry and electric field 1=11471
cubic crystals, acoustic excitation of nuclear induction 1=6428
cuprous oxides, spin-lattice, local field fluctuation contribs. 2=789, 8689
cyanuryl chloride, N^{14} resonance, coupling const. and asymmetry parameter 1=10198
cyclopropanes, chlorinated 3=25142
cyclopropyl chloride, quadrupole coupling consts. 4=12500
detection, by crossing technique 3=12336
deuteron resonance of crystals with O—D...O bonds 4=28894
p-dichlorobenzene, Cl resonance, shift with applied field 1=17350
p-dichlorobenzene, orientational melting process 2=791, 8688
p-dichlorobenzene, relax. time meas. using impurities 4=13356
p-dichlorobenzene, 6 solid solns. of 1=20281
p-dichlorobenzene, spin-lattice relax. 2=788
p-dichlorobenzene, Zeeman effect 1=8857
1, 2-dichloroethane- d_4 3=8745
1,2-dichloroethane, solid, Cl^{35} spin-lattice relaxation 4=22477
1, 1-dichloro-2-propanone, Cl^{35} reson. 2=3787
1, 4-dimethylnaphthalene, solid solution in p-chlorobenzene 1=20277
effects in dilute alloys 1=9075
ethylendiamine, N^{14} reson. 2=18487
ferrites, quadrupole relax. 2=14857
halides, rel. to orbital energy matching 2=6226
hexadecapole moments induced in ionic closed shells, calc., antishielding effects 1=7424
hexamethylene tetramine, N^{14} reson. mass 2=9724
hexanediamine, coupling meas. 3=2656
impurity shift 1=14832
inertial mass anisotropy detection 1=4245
interaction in covalent bonds, variation with applied field 1=17350
ionic crystals, rel. to phonon spectrum 4=17702
ionic crystals, spin-lattice relax. time 1=3948
line shape, correction for instrumental broadening 2=16081
line shape, mag. field, const., effect 2=23726
linear effect of applied elec. field 1=14837
liquids, relax., rotational correl. times 4=210
liquids, relax. theory rel. to elec. field gradient 4=8225
meas. at low temp., cryostat 3=24503
measurement cryostat, allowing cold specimen charging 4=14919

Nuclear quadrupole resonance—contd

metal halides, solid layer type, bonding 2=4294
metals, field gradient, sign of conduction electron contrib. 4=20155
metals, review 2=8681
monochloroacetonitrile, coupling meas. 3=2656
monochloroacetonitrile, N^{14} reson. 2=14861
naphthalene, solid solution in p-chlorobenzene 1=20277
natrolite ($Na_2Al_2Si_2O_{10}$), Na^{23} and Al^{27} reson. 2=8691
Ninth Ampere Colloquium 1=4734
nitriles, N^{14} quadrupole coupling consts. and field gradient asymmetry parameters 1=4950
nitrogen in organic cpds. at $-196^\circ C$ and $74^\circ C$ 1=12574
organic crystals, Cl reson., ionizing radiations effect 2=14863
paradichlorobenzene, Cl^{35-37} lines meas. 2=9724
parametric spectrograph 1=12025
perdeuterobenzene, liquid, relax. rel. to molec. reorientation 4=18221
perturbation due to strains in alkali halide crystals, gradient-elastic tensor 4=15396
4-picoline, coupling meas. 3=2656
4-picoline, N^{14} reson. 2=14861
4-picoline, transitions 1=12575
pyridine, N^{14} reson. 2=14861
n-propyl chloride, gauche, quadrupole coupling constants 3=25130
pyridine, coupling meas. 3=2656
relaxation, effect of molecule shape, theory 4=12516
relaxation time meas. apparatus, 20-150 Mc/s 4=762
resonance energy levels, for arbitrary asymm. of elec. field grad. 2=2309
review 3=5031
review, recent work 4=761
review, systematization, USSR work 1=4742
ruby, temp. dependence of Al quadrupole interaction 3=13317
shift of freq. by elec. field 1=14836
solids, chemical bond study 2=14349
solids, spin-lattice relax., pulsed nuclear induction techniques 2=788
solids, Stark effect up to 50 kV/cm 4=7358
solids, temp. dependence of nuclear pure quadrupole relaxation 3=25598
spectrometer, automatic 3=19469
spectrometer, single tube, for Cl and N meas. 2=9724
spectrometer, with square-wave freq. modulation 2=1609
spectrometer, superregenerative, feed back coherence control 4=19249
spin-echo effect, u.s. stimulation 2=4292
spin 5/2 nuclei, 2nd moment 4=1908
spin Hamiltonian for half-integral I 1=19573
spin $\frac{3}{2}$, n.m.r. broadening of coupled nucleus 4=9768
technique improvements 1=10797
use for temp. meas., apparatus 3=14401
temp. and pres. depend., asymmetric crystals 3=25596
temp., press. and impurities, effects 2=14862
1, 2, 4, 5-tetramethyl benzene, solid solution in p-chlorobenzene 1=20277
theory and applications to research, review 2=9723
theory, expt. and appl., review 2=14859
thiorea, N^{14} reson. 2=14861
3d transition-metal bromates and iodates, antiferromagnetic interactions 1=7807
III-V cpds., relax. times 2=8696
trans-1,2-dichloroethane, effect of hindered rotation 4=26457
1,3,5-trichlorobenzene, Zeeman effect 1=9076
N-trimethylborazole, B^{11} quadrupole coupling constants 1=17348
trimethoxyboroxine, B^{11} quadrupole coupling constants 1=17348
urea, N^{14} reson. 2=14861
urea, single crystals 2=2309
Zeeman effect in crystalline powders 1=20279
Zeeman modulator, circuit modification 2=20176
Zeeman splitting parameters, table 1=5823
 $AgBr$, spin-lattice relax. time 1=3948
 Al^{27} , in Al_2O_3 , linear elec. shifts meas. 4=28907
 Al^{27} , in $AlPO_4$ 2=4298
 $AlCl_3 \cdot 6H_2O$, temp. depend. 2=23725
 As^{75} in orpiment, 77° and $300^\circ K$ 4=23079

Nuclear quadrupole resonance—contd

- As⁷⁵ in As₂O₃, rel. to high pressure 1=12576
 As⁷⁵, in Na₂NaSO₄·7H₂O 2=8690
 B¹¹, in lesserite 2=14851
 B¹¹ in trialkylboranes, rel. to α C—H bonds 4=6645
 B—I cpds. 2=14860
 Ba¹³⁵,¹³⁷ in Ba(ClO₃)₂·H₂O 3=12336
 Ba¹³⁷ and Ba¹³⁵, in Ba bromide hydrate 2=16302
 Ba¹³⁷, in BaBr₂·2H₂O 2=8693
 Ba(ClO₃)₂ hydrate, chlorine pure quad. echo 2=8687
 BeO, Be⁹ quadrupole coupling const. 1=20278
 Be⁹ and O¹⁷ in BeO, quadrupole interactions 4=12568
 Bi¹¹ in danburite, coupling and atomic struct. 4=20628
 Br⁷⁹ in SbBr₃ complexes with benzene and derivs., and naphthalene, and mol. struct. 4=23081
 Br⁷⁹,⁸¹ in halogenated benzene and nitrobenzene rel. to electric field 4=1312
 Br⁷⁹,⁸¹ in KBr, quadrupolar relaxation 1=3942
 Br⁷⁹,⁸¹ in Menshutkin [SbBr₃] complexes, rel. to structure 4=26456
 Br⁷⁹,⁸¹ in NaBrO₃, spin-lattice relax. and temp. depend. 4=4434
 Br⁸¹, nuclear quadrupole interactions in polycrystalline cpds., elec. induced perturbations, expt., microscopic and phenomenological theory 4=28909-10
 Br⁸¹ in KBrO₃, rel. to high pressure 1=12576
 Br⁸¹ in KBrO₃ and NaBrO₃, impurity shift 1=6438
 BrCl 1=11125
 CCl₄, liquid, rotational correl. times 4=210
 CCl₄, solid, multiplet structure, temp. var. 2=790, 4295
 CHF Cl, liquid, spin-lattice relaxation by spin-rotational interactions 1=8138
 CH₃I and CD₃I, I resonance., temp. depend. 2=10727
 C(NH₂)₃Al(SO₄)₂·6H₂O and isomorphous cpds. 1=12573
 Cl, in CuCl₂·2H₂O, g factors, meas. and calc. 4=3958
 Cl in monochloroacetic acid crystals, 3 polymorphous phases 4=13353
 Cl, in 6-chloro-2-nitrotoluene, n.q.r. Zeeman spectrum 4=17704
 Cl, temp. dependence 4=1313
 Cl₂, solid, Zeeman broadening 3=15411
 Cl³⁵ in α-ω-(CH₂)₂ Cl₂ 1=7808
 Cl³⁵ in aromatic cpd., effect of elec. field due to nitro-, amino- substituted 4=20105
 Cl³⁵ in cpds., Zeeman effect 4=25739
 Cl³⁵, nuclear quadrupole interactions in polycrystalline cpds., elec. induced perturbations, expt., microscopic and phenomenological theory 4=28909-10
 Cl³⁵ in ortho-dichlorobenzene, Zeeman effect 4=13355
 Cl³⁵, in paradichlorobenzene, effect of ±1, 2 transitions on relaxation time 3=25597
 Cl³⁵, in para-dichlorobenzene and Na chlorate, rel. to temp. 2=8695
 Cl³⁵ relaxation in para-dichlorobenzene under const. press., temp. dependence 4=28908
 Cl³⁵ in Ba(ClO₃)₂·H₂O, Zeeman splitting 3=12336
 Cl³⁵ in SbCl₃ complexes with benzene and derivs., and naphthalene, and mol. struct. 4=23081
 Cl³⁵, in various cpds., 4.2-300°K 4=26458
 Cl³⁵,³⁷ in FeCl₃, large linewidth 4=17703
 Cl³⁵,³⁷, in polycryst. trichloroacetic acid, isotope effects 4=10350
 Cl³⁵ in CCl₃C(OH)C₂H₅ multiplet structure 3=15964
 Cl³⁵ in KClO₃ and NaClO₃, impurity shift 1=6438
 Cl³⁵, in Na and K chloraurates, + 18° to -196°C 4=12520
 Cl³⁵ in NaClO₃, temp. var. extrapolation to 0°K 4=4435
 Cl³⁵ in NaClO₃, temp. var., for temp. meas. 4=21340
 Cl³⁵ in (PNCI₃)₃, Zeeman effect 3=23264
 Cl³⁵ and TeCl₄, liquid air temp. 4=1310
 Co⁵⁹, in f.c.c. Co metal, temp. and press. depend. 1=11464
 Cu, effect of cold work 1=14834
 Cu⁶³, in various cpds., 4.2-300°K 4=26458
 Cu, Cu nuclei near Ag and Zn impurities 3=13318
 Cu⁶³, in Cu₂O, resonance quenching by Ag 2=14858
 CuZn, rel. to quadrupole coupling with conduction electrons 1=1416
 D, in D₂O liq., theory and expt. 4=8225
 D in organic liqs., spin-lattice relax. 4=24248
 D₂O, liquid, relax. rel. to molec. reorientation 4=18221
 Fe⁵⁷ in BaO·6Fe₂O₃, quadrupole splittings and isomer shifts 4=12591

Nuclear quadrupole resonance — contd

- Fe⁵⁷ in ZnS, and luminescence centres 4=7351
 Ga, liquid, relaxation process 3=23915
 GaAs, quadrupole spin transitions 3=8747
 Ge, relax. time 2=8696
 Hg²⁰¹, relaxation on quartz walls 4=6493
 I in iodic acid, rel. to temp. 4=22426
 I¹²⁷ in halogenated benzene and nitrobenzene rel. to electric field 4=1312
 I¹²⁷ in mercuric iodide, at high pressure 3=25596
 I¹²⁷, nuclear quadrupole interactions in polycrystalline cpds., elec. induced perturbations, expt., microscopic and phenomenological theory 4=28909-10
 I¹²⁷ in SnI₄, rel. to high pressure 1=12576
 In, 4-225°K 1=5077
 In, 4.2-390°K, elec. field gradient 2=4296
 In, press. var. and thermal expansion, and elec. field 4=28313
 In¹¹⁵ in InI, 4=26453
 KClO₃, Cl³⁵ nuclei, shape of signals 2=23726
 KClO₃, Cl³⁵ second movement, linear effect of applied ele. field 1=14837
 KClO₃, γ-irradiation effect 2=8694
 KClO₃, spin-lattice relax. 2=788
 KNbO₃, ferroelectric, Nb⁹³ spectrum, temp. depend. 1=1288
 Li, in ferroelectric cpds., temp. depend. 2=18972
 Li₂SO₄·D₂O, Li⁷ resonance 2=4297
 Li⁷ coupling in LiNO₃ 1=20280
 MgAl₂O₄ spinel 1=14835
 N¹⁴ in ethylenediamine, temp. depend. from 77-280°K 4=7359
 N¹⁴ in hydrazine, 77° to 244°K 4=13354
 N¹⁴, in N₂ solid 2=8692
 N¹⁴, in organic cpds. 2=14861
 N¹⁴, in pyridine 2=3687
 N¹⁴ relaxation by quadrupole interactions in molecular liquids 3=9482
 N¹⁴ in solid N₂, effects of N¹⁵ 3=8742
 N¹⁴ in FCN 4=9735
 N¹⁴ in MeCN, EtCN, PrCN and Me₂NCHO, relax. 4=20104
 ND₄ salts 2=6708
 ND₄ salts, deuteron reson. 2=6708
 Na theosulphate, single crystals 2=2309
 Na²³, in NaCl, quadrupolar relaxation 1=3942
 Na²³, in NaNO₃, coupling constant 1=14838
 NaBrO₃, Br⁸¹ freq. shift by elec. field 1=14836
 NaCl, of rare Na, Cl nuclei at non-cubic sites 4=20606
 NaCl, Cl³⁵ coupling, Stark effects 4=23080
 NaClO₃, spin-lattice relax. 2=788
 NaClO₃, Cl³⁵ second movement, linear effect of applied elec. field 1=14837
 Na²³ and I¹²⁷ in NaI, rel. to temp., calc. 4=17702
 Ni(IO₃)₂·2H₂O, antiferromagnetic interactions 1=7807
 NaNO₃, Na²³ elec. quad. coupling const. 2=10724
 Na₂WO₄, W¹⁸³ reson., conduction-band states 2=18968
 Sb¹²¹,¹²³, in polycryst. SbI 2=21388, 23724
 Sb¹²¹,¹²³ in stibnite 3=11128
 Sb¹²¹,¹²³ in Sb metal at 4.2°K 3=8746
 Sb¹²¹ Cl₃ crystal compounds, temp. var. 4=4433
 SbCl₃, Sb¹²¹ resonance 3=15968
 SbCl₃, SbBr₃ complexes with benzene and derivs., and naphthalene, and mol. struct. 4=23081
 Sb¹²¹,¹²³ in SbBr₃ (Menshutkin) complexes rel. to pyramid structure 4=26456
 Sb¹²¹,¹²³ in SbCl₃, SbBr₃ complexes with benzene and derivs., and naphthalene, and mol. struct. 4=23081
 TiCl₄, ThCl₄, NbCl₅, TaCl₅ 1=14839
 Tm ethyl sulfate, oxide, trifluoride, and electronic shielding 4=30497
 Tm¹⁶⁹(C₂H₅SO₄)₃·9H₂O, temp. var., Mossbauer meas. 4=3965
 ZnS:Fe⁵⁷, and luminescence centres 4=7351

Nuclear reactions due to—contd**protons—contd**

- (p, γ) spectroscopy, liquid-air trap 2=16100
 (p, γ) in stars, in proton-rich element prod. 2=6983
 (p, Li^8), 9 GeV, in heavy emulsion nuclei 2=14099
 (p, n), comparison with Weisskopf neutron evap. theory 1=2209
 (p, n) cross-sections, optical model distorted wave analysis 3=669
 (p, n), 4-16 MeV, statistical model 2=5875
 (p, n) in mirror nuclei and nuclear two-body force 1=19463
 (p, n) mirror state reactions, new term in nuclear optical potential 2=22810
 (p, n), neutron spectra groups, interpretation 2=22809
 (p, n) on nonmirror even-even nuclei, excited isobaric states 2=18249
 (p, n), and nuclear optical potential, isotopic spin dependence, calc., $> \sim$ MeV 3=19749
 (p, n), (p, $\alpha\gamma$) and (p, α) as energy standards 1=13798
 (p, n) (p, 2n), rel. to bypassed nuclei origin 2=446
 (p, n) production of radioisotopes in cyclotron 1=13674
 (p, n), quasi-elastic, isobaric spin depend. 2=16285
 (p, n), quasielastic model 4=3654
 (p, n) reactions, differences from (p, p'), rel. to Blair model 2=1396
 (p, n), reactions, 18 medium-weight nuclei, cross-sections at 4-5.5 MeV 2=434
 (p, n) reactions, energy spectra, statistical model 3=2426
 (p, n) reactions in intermediate-weight nuclei at 5 MeV, spectra and ang. distrib. 1=8714
 (p, n) reactions, isobaric states props. 3=633
 (p, n) reactions in medium-weight nuclei 1=9862
 (p, n) reactions on mirror nuclei, test of direct reaction mechanism 1=7373
 (p, n) reactions at 190 MeV, rel. to neutron evap. theory 2=5736
 (p, n) reactions, Q-values meas. 3=668
 (p, n) reactions, resonance peaks, rel. to ($p\bar{n}$) collective state 2=20619
 (p, n) reactions at 7-8 MeV on odd-even nuclei, evidence for statistical model 1=696
 (p, n) reactions, width of observed isobaric states 2=16295
 (p, n), resonance peaks, correlation effects 3=8096
 (p, n), thin target for obs. 4=19322
 (p, n) threshold-curve shapes, meas. with proton beams 4=17126
 (p, n) threshold meas. on 8 nuclei 4=6339
 (p, n), 30, 50 MeV, and isobaric state excitation in spectra obs. 4=3653
 (p, p) on 15 rare earth nuclides at 12 MeV, p' spectra 3=22285
 (p, p') inelastic scattering, DWBA calc. 2=1857
 (p, p') rel. to (p, n) cross-sections, direct interaction model 1=8716
 (p, p') reactions, inapplicability of Austern-Butler-McManus theory 1=13788
 (p, p') reactions, similarity to (d, d') and differences from (p, n), rel. to Blair model 2=1396
 (p, p') spectra, rel. to evaporation model 2=1889
 (p, p α), rel. to α -particle clustering in nucleus 4=25394
 (p, p α) reaction on 4n nuclei 2=20615
 (p, p d), high-energy, theory 4=9500
 (p, p d), momentum distrib. of d, theory 4=22129
 p, p' γ , correl. bet. p' γ polarization and photon's direction 3=15191
 (p, p' γ) at high energies, theory 2=439
 (p, p' γ), (p, γ) and (p, n γ), identification 2=20431
 (p, p' γ) reactions, p' γ ang. correl. symmetries, theory 2=22803
 (p, p' γ), use in Zn⁶⁴, ⁶⁶ energy level obs. 4=9402
 (p, p n) cross-sections, effect of nuclear rearrangement 1=13789
 (p, p n), high-energy, nuclear structure effects 3=12679
 (p, p n) reactions at multi-BeV energy, light-nuclei data and theory 2=13226-7
 (p, p n), 370 MeV, medium weight nuclei 3=15197
 (p, p n), 20-150 MeV, mechanisms 2=14093
 (p, p n), 20-155 MeV, results rel. to theory 2=456
 (p, p π^+), cross-section with π -meson exchange 3=4635

Nuclear reactions due to—contd**protons—contd**

- (p, pt) reaction on (4n-1) nuclei 2=20615
 (p, t) in Al and Pb 1=19469
 (p, t) in Al and Pb 3=4637
 (p, t) reactions, mechanism 2=13230
 (p, t) reactions, survey, compound nucleus and direct-interaction effects 0=20425
 (p, t) reactions at 22 MeV, t energy distrib., reaction mechanism 2=17592
 (p, 2 nucleon) reactions at 250-440 MeV, excitation functions 1=4869
 (p, 2p) ang. correl. for p-shell nuclei, analysis 4=15206
 (p, 2p) cross-sections, effect of nuclear rearrangement 1=13789
 (p, 2p), direct interaction 2=17581
 (p, 2p), energy spectra, theory and expt. 2=20622
 (p, 2p), in light nuclei 4=12215
 (p, 2p), on light nuclei, effect of absorpt., calc. 3=19842
 (p, 2p) on light nuclei, residual nucleus states and j-j model 4=12217
 (p, 2p), rel. to nuclear structure 1=3439
 (p, 2p) at 150 MeV, nuclei up to Ca, rel. to shell structure 2=1774
 (p, 2p) 170 and 450 MeV, in 1p-shell nuclei, distorted-wave analysis 4=1078
 (p, 2p) and (p, np), "spectroscopic approach" for protons up to several GeV 3=2440
 (p, 2p) reactions at 40 MeV, mechanism 2=11404
 (p, 2p) reactions, 155 MeV, study of structure of light nuclei 2=20625
 pickup, radioactive heavy ions detector 3=12609
 pick-up reactions, deuteron production 1=5916-17
 plastics, at 9 GeV, C¹¹ prod. and diffusion loss 4=19717
 polarization effects, with spin-orbital interaction 3=22353
 proton-light nuclei in emulsion, at 9 GeV, product distrib. 2=12196
 proton-nuclei, fast, rel. to nuclear structure 2=1871
 proton-nucleus collisions at 27 GeV in emulsion 1=17102
 quasi-free non-coplanar p-p scatt. 4=3650
 reduced widths and charge independence 2=14082
 scatt. cross-sections, inelastic, 10 MeV, for 19 elements 3=8095
 scattering from C¹², degree of polarization 2=440
 scattering on Ilford G5, NIFKI-R emulsions 2=445
 scattering, multiple, high momentum, in nuclear emulsions 1=19450
 secondary particle ang. distrib., for 10¹⁰-10¹³ eV reactions 3=17273
 70-135 MeV, propane bubble chamber study 2=5540
 size resonances, search for, confirmation for Ni 1=8720
 solar cosmic rays in atmosphere, 30-300 MeV 2=22692
 statistical theory, comp. with expt. 2=22813
 supernova envelope, nuclear synthesis in A = 20-40 3=21123
 tandem generator used 2=5906
 target of T, or D, -saturated Zr, temp. distrib. 3=24395
 <10 GeV, inaccuracy of Castagnoli formula and Duller-Walker diagram 2=22574
 10 MeV reaction cross-sections, rel. to optical model 1=12193
 10¹⁰-10¹² eV, apparatus 0=12805
 theory, in 2nd quantization 4=9487
 total and charged-particle cross-sections at 9-85 MeV, rel. to optical model 1=8712
 total cross-section meas. at high energy, beam attenuation technique 2=7552
 140 MeV-4 BeV, absorption cross-sections, characteristic transparency curve 1=17091
 150 MeV, analysis rel. to momentum distrib. nucleons 2=454
 57 MeV, spectra of emitted charged particles 3=8100
 450 MeV, π^{\pm} prod. on 7 nuclei 2=3577
 985 MeV, charged-particle and total cross-section for 11 elements, C to Sn 0=20432
 3.0 BeV/c, cross-sections 2=3387
 3-28 GeV 3=10071
 25 GeV, in complex nuclei, deuteron prod., calc. 0=20245
 25 GeV, rel. to hyperfragment emission 2=14094
 29 MeV, total cross-sections, C, Al, Ni, Ag, Au 4=9501
 A, at 61 MeV, total cross-section 2=7552
 A⁴⁰(p, α)Cl³⁷, at 0.8-3.5 MeV 2=3562
 A⁴⁰(p, γ)K⁴¹ 2=13997

protons — contd

- $A^{40}(p, \gamma)K^{41}$ and K^{41} levels, γ spectra, spins 4=3565
 $A^{40}(p, \gamma)K^{41}$, at 1-1.65 keV 3=7991
 $A^{40}(p, \gamma)K^{41}$, resonance anomalies undetected 2=3562
 $A^{40}(p, \gamma)K^{41}$, 700-1400 keV 1=8727
 $A^{40}(p, n)K^{40}$ at 5.6 MeV, γ -ray spectra 3=6250
 $A^{40}(p, p')A^{40}$, at 0.8-3.5 MeV 2=3562
 $Ac(p, \alpha xn)$, cross-sections 3=6251
 Ag , disintegration fragments, charge distrib. 2=488, 22814
 Ag , fission by 1.0-3.0 BeV protons 2=10158
 Ag , formation of Na^{24} and Mg^{28} , 320-880 MeV 3=22387
 Ag , at 480 MeV, ang. and energy distrib. of products 0=9621
 Ag , fragmentation by 9 BeV protons 2=14151
 Ag , inelastic cross-sections, 77 to 133 MeV 2=5919
 Ag , at 9 BeV, fragmentation 0=9622
 Ag , at 190 MeV, Monte Carlo calc. 2=13217
 $Ag(p, \alpha)$, at 1, 2, 3 BeV, α energy and ang distrib. 0=7548
 $Ag(p, \gamma)$ 0=7557
 $Ag(p, \gamma)$, energy spectrum 1=13795
 $Ag(p, \gamma)$ 10-14 MeV 1=9858
 $Ag(p, Li^8)$, 9 BeV meas. 3=22389
 $Ag(p, n)$, cross-section at 10 MeV 1=12193
 Ag , spallation element yield for high energies 4=12226
 Ag , at 340-2000 MeV, light nuclei emission, Monte Carlo calc. 0=13218
 Ag , 2.9 GeV, differential range study of products 4=22140
 $Ag^{107,109}(p, n)$, at 5-10.5 MeV, cross sections 2=22812
 $Ag^{108}(p, n)$ 1=2209
 Ag^{109} , 82, 110 and 156 MeV protons, Monte Carlo calc. of cascades 4=17136
 $AgBr$, 1 and 2 GeV, α -particle evaporation 4=25401
 Al bombarded, γ -rays 2=20615
 Al , elastic scattering, 6-7.4 MeV 2=5898
 Al , at 4-12.9 MeV, reaction cross-section 1=8720
 Al , at 5.7 BeV, cross-sections, expt. and theory 0=13226-7
 Al , inelastic cross-sections, 77 to 133 MeV 2=5919
 Al , neutron evap. cross-sections 1=14088
 Al , 180 MeV, total cross-section 1=19474
 Al -p, 82 and 105 MeV, tritium production 2=12191
 $Al(p, \gamma)$, resonance studies with H_1^+ , H_2^+ and H_3^+ ions 1=691
 $Al(p, \gamma)$ 10-14 MeV 1=9858
 $Al(p, n)$, cross-section at 10 MeV 1=12193
 $Al(p, n)$, 143 MeV, neutron polariz. 3=10349
 Al -p, at 23-1 GeV, γ -ray spectra 2=9840
 Al , at 10-30 BeV, π^+ , K^+ , p, \bar{p} production 2=20627
 Al , 30 GeV, prod. of t, d, p, \bar{p} , π and K 3=6090
 Al , at 25 BeV, mass analysis of secondary particles, high deuteron prod. 0=17582
 Al , at 28 GeV, spallation cross-sections 2=18326
 Al , at 30 and 33 BeV, product analysis 2=14095
 Al^{27} , capture, levels in Si^{28} 1=8588
 $Al^{27}(p, \alpha)$ 3=2473

Nuclear reactors, fission

(Heading introduced in 1964)

AGR reference design 4=6431
 AGR, U.K. development and research programme 4=6435
 absorbing rod, effect on neutron flux 2=10180
 absorbing rod system, efficiency 2=18382
 accidents, and escaped fission products, for various operating powers 3=8162
 active contamination of steam—water loop, 1st USSR station 4=3755
 aerosols as coolants 1=17232
 age-diffusion theory, adjoint functions and orthogonality rels. 3=11666
 age of U^{233} fission neutrons in water 0=15628
 air-cooled graphite channels, thermal props. beryllium oxide, irradiation damage 2=3971-2
 Aircraft Reactor Experiment 0=13311-14
 albedo, generalized, of Cd sheets 1=2267
 alkali metal coolants, heat-transfer and high-temp. props. 0=3526
 ammonium salts as moderators for cold neutron sources 3=6010
 "Anna", 2nd Polish, critical assembly 3=25013
 "Anna", 2nd Polish exptl., critical assembly 3=691
 "Apsara", Trombay, γ -dose rates 2=10184
 aqueous homogeneous zero-energy UO_2 suspension reactor 2=12265
 aqueous moderators, neutron spectra meas. 0=7657
 Argonaut reactor, time behaviour of neutron density and of reactivity 0=15630
 Argonaut type, redundant safety channel 2=17850
 Argos, instrumentation improvements 2=10182
 asymptotic period reactivity determinations, sources of error 0=13331
 asymptotic reactor theory, slab systems 3=2526
 automatic control systems, electronic circuiting 1=2263
 automatic control systems, theory, Liapounov's function 1=2264
 Avogadro R.S.I. reactor first start-up 0=2700
 Avogadro RS1 reactor, reactivity effects 2=5997
 BBC-Krupp high-temp. reactor, construction and characteristics 0=5821-2
 BEPO, reactivity absorption of shut-off rods, by source-jerk technique 2=20701
 BEPO, subcritical reactivity, meas. by source-jerk technique 2=20700
 BEPO, transfer junction model for control studies 3=12729
 B.E.R. reactor, Berlin, reactivity measurements 1=3482
 BR-5, high-energy neutron spectrum 1=19565
 BR-5, neutron beam facility for shielding studies 2=18385
 BSR-I, effective delayed neutron fraction meas. 2=12253
 BSR-I (Oak Ridge), reactivity worth of central fuel element 2=6036
 BWR, dynamics, with natural convection 2=20705
 BWR, flux distribution calc. 0=15633

Nuclear reactors, fission—contd

bang—bang control, boiling moderator reactors 3=19906
 bare homogeneous reactors, critical conditions
 correl. 2=8023
 bare Pu^{239} critical assembly, leakage spectrum 1=17218
 basic data, world-wide tabulation 2=3641
 basic nuclear principles, review 2=20695
 Belgrade D_2O natural U critical assembly,
 buckling 1=13903
 biological shield, thermal stresses 0=14561
 biological shielding, multigroup calc. 2=14175
 black void reactor concept 1=17195
 boiling-water, dual cycle power reactor 0=11469
 boiling-water, effect of press. on dynamic
 behaviour 2=6010
 boiling-water, Nb-V, Nb-Zr alloys in 2=4330
 boiling-water, neutron and gamma shielding calc. 2=8041
 boiling water reactor, dynamic performance
 evaluation 1=3495
 boiling water reactor plant, analogue 1=751
 boiling water reactors, kinetics 1=752
 boiling water reactors, static hydraulic stability 1=17230
 boiling water reactors, vapour bubble size distrib. 4=11419
 boiling-water, use of Th^{232} 2=14174
 boiling-water type, dynamic model 3=25016
 Boltzmann eqn., energy-depend., transport
 approx. 3=12463
 Boltzmann eqn., monoenergetic, variational
 analysis 3=18755-6
 Boltzmann eqn., 1-dimensional, energy dependent 0=15618
 boundary, gap, blackness conditions, spherical harmonics
 approx. 2=14166
 boundness and stability in nonlinear dynamics 1=17196
 breeder reactors, review 2=14160
 breeding gain and power level dependence on level
 of U^{235} in reactor blanket 0=7661
 breeding potential of thermal reactors 1=757
 Bucharest 2000 kW reactor, transient states 0=11468
 bulk shielding facility, thermal neutron flux calc. 2=6012
 Bulk Shielding Reactor, fast-neutron and gamma
 spectra 0=9719
 burnable fission products, power reactor kinetics 2=6026
 burnout heat flux, statistical prediction 1=17216
 burn-up calc., simplified method 2=10168
 calculations using Fermi age theory, minimum crit. mass
 and flux flattening 2=18373
 Calder Hall, resonance integral and Doppler coeff.
 Monte Carlo evidence 2=20707
 Calder Hall type, Pu recycle 0=13366
 calorimeter, for high radiation fields 3=12740
 Canada—India reactor, physics calc. 2=5998
 Canada's nuclear energy programme, review 1=2251
 CANDU power station, review 1=2251
 CANDU power station, U reactivity life 1=2252
 CANDU type, neutron slowing-down spectrum 3=25031
 CANDU-type power reactor, neutron temp. 3=25030
 cascade theory, characteristic-functional methods 1=6
 catalytic, tubular, chemical reaction and
 diffusion 1=17244
 cell calcs. in cylindrical geometry, effect of zero
 gradient boundary conditions 3=6322
 cell calculations, Sn code accuracy 1=13883
 ceramic fuel pin, transient heat transfer 3=17514
 ceramic fuels, irradiation calc., design, high
 burnup 1=17234
 chain reactions, analogy with vibrating systems 3=4680
 channel temp. field and thermoelastic stress in element
 shell 3=4681
 chemical reactions, use for 3=6924
 chemonuclear reactors 1=11056
 Cherenkov radiation during start up 4=1162
 circulating-fuel reactors, heat transfer 0=12513
 clad fuel elements, diffusion bonding 0=13478
 codes for computers 3=17508
 collection of papers(1964) 4=25451
 collision density at epithermal energies 3=12525
 collision probabilities in reactor physics 1=13877
 compact reactors, power density calc. 2=10167
 complex relaxation time, soln. of kinetic
 equations 1=769
 composite reactor lattices 1=768

Nuclear reactors, fission—contd

computer codes tabulation 2=3642
 computer control 0=2068
 computers, on-line, for power reactors 2=20717
 concentric cut-off rod efficiency 0=7670
 concrete shielding const. 3=17516
 conduction heat-flow transients, nomogram 0=12509
 consistent P_1 criticality calcs. 2=6023
 "Consort" reactor, for teaching and research 0=17641
 continuous-medium reactor, stability 1=765
 control element linear extrapolation distance, improvements
 on Milne solution 3=22449
 control element perturbation theory 0=13375-6
 control evaluation, theory of application of "absorption
 area" 0=15627
 control materials, B-containing, irradiat. damage 2=18625
 control, neutron detector 0=9384
 control rod absorption of neutrons 1=13888
 control-rod burn-up 3=4695
 control rod effectiveness, effect of boundary
 condition 0=7664
 control rod reactivity, variational calculation 0=13379
 control rod theory, criticality conditions, various
 configurations 1=17211
 control rod worths, pulsed neutron meas. 2=6038
 control rod worths of rare earth oxides 0=13377
 control rods, effectiveness determination 2=18380
 control rods, fabrication and props. of B-Ti
 dispersions 0=14057
 control sheets, general theory 0=13374
 control in subcritical region 1=2265
 control system of Ispra-1 2=8042
 control; temp. self-regulation 2=8036
 control by temperature 1=3494
 control, treatment of results 1=13900
 coolant failure results, analogue computer
 simulation 0=5466
 coolant-gas outlet temp., rel. to output level 2=10173
 coolant materials, props. tabulation and biblio-
 graphy 2=3666
 coolant temp. coeff. and two-thermal group diffusion
 model 3=15259
 coolants, nucleate boiling of organic liquids 0=13359
 cooling channel temp., simple numerical
 determination 1=13901
 cooling efficiency rel. to props. of cooling gas 3=694
 cooling facility for irradiated sample 2=16459
 cooling gas flow, elec. field effect 2=14171
 cooling, heat transfer from tube bundles to water
 flow 0=14868
 cooling systems, "burnout" studies with wet
 steam 0=2698
 core kinetics, reactivity fluctuations 2=20702
 core physics and kinetic studies 3=24997
 counting rate autocorrelation functions 1=758
 critical assembly, neutron flux data, measuring
 techniques 0=13348
 critical assembly prompt neutron periods, meas.
 with pulsed source 0=13345
 critical assembly, (r, z) multigroup calc. 0=13338
 critical equation, theory 3=22446
 critical mass calc., anisotropic diffusion coeff. 3=10415
 critical mass meas. room scatt. neutron corr. 4=21879
 critical parameters for fissile bodies 2=3659
 critical reactor equations 0=13324
 critical size and flux distrib. at power level 3=12722
 critical system, cylindrical channels, reactivity
 effect 2=14162
 critical system with small cavities 1=13891
 critical thickness of slabs, neutron transport
 theory 1=10890
 critical $\text{UO}_2\text{F}_2\text{--D}_2\text{O}$ assemblies 0=13335
 criticality condition, Chebyshev polynomial
 calc. 1=10891
 criticality condition derived by multigroup diffusion
 theory 1=17184
 criticality estimates for spheres and slabs 1=13896
 criticality estimation 2=6009
 criticality, low enrichment uranium in hydrogen 2=12250
 criticality measurements, BeO moderated, enriched
 U fueled 1=17235-6
 criticality problems, use of Green functions in
 stationary neutron transport theory 0=14546

Nuclear reactors, fission—contd

cross flow reactor, heat transfer calc. from electrical analogue 0=13357
 current integrator, precision, zero power reactor 2=10185
 cylindrical, completely reflected, neutron distrib. 2=20706
 cylindrical, geometric buckling, pulsed neutron source 0=5826
 cylindrical neutron multiplying structure, heterogeneous theory 0=17644
 cylindrical reactor, effect of control rods, two-group calc. 1=3493
 cylindrical reactors, calculations 0=7673
 DFR, coolant, impurity content reductn. 3=2541
 DFR, operation, safety assessment 3=2540
 Dancoff correction, fuel rods with air gaps 3=6337
 Dancoff correction, several infinitely long cylindrical rings 3=10413
 delayed-neutron fractions, effective, meas. 3=19904
 delayed neutron group theory 2=3648
 Denmark, Risø, 3 research reactors, comprehensive survey 0=9714-16
 dense lattices, effective resonance absorption cross-sections 0=15613
 describing function of a supercritical reactor 3=8159
 design, radiation damage theory, developments 1=6120
 detector weighting functions 3=22443
 development in U.S. 1=9894
 DIDO, calc. of radiation dosage rates 3=2515
 Dido (FRJ-2), kinetics 3=15262
 DIDO, neutron diffr. equipment 3=7869
 DIDO, period meter for fast period protection 2=20728
 diffusion anisotropy, singly and doubly periodic lattices 3=6324
 diffusion coeff. weighting, streaming theory 2=12254
 diffusion equation, perturbation methods 0=15619
 diffusion equations, accuracy and scope of difference solutions 1=784
 diffusion length, thermal n, effect of empty channels in moderator 4=17216
 diffusion lengths and diffusion hardened spectra 2=14165
 diffusion theory flux peaking at sharp corner 3=15255
 dilute fast reactor, Na-reactivity effects, calc. 2=20708
 dimethyl acetylene as moderator for cold neutron sources 3=6010
 diphenyl-diphenyl oxide, as moderator and coolant 0=5825
 diphenyl-impregnated graphite as moderator 1=5732
 direct-contact core systems 4=19900
 discrete ordinate quadratures for thin slab cells 3=6326
 Doppler broadening of cross-sections 3=10418
 Dresden nuclear power station, reactor details 0=5816
 dynamic parameters, statistical estimation 3=693
 dynamics, spherically symmetric 4=3722
 EBR-I meltdown, core physical and metallurgical changes 0=13380
 EBR-I (Mk II), U^{238} capture and fission patterns 0=13281
 EBR-2, reactor system, fuel, control 3=2517
 EBWR, reactor "noise", statistical analysis 0=5833
 EGCR fuel assemblies 2=22863
 EGCR fuel evaluation studies 2=22873
 EL3, automatic control system 1=2255
 EWA; neutrons scattered from channel, ang. distrib. 1=19569
 effect of emptying D_2O coolant channels, theory 2=8040
 effect of parity nonconservation 2=5977
 effective fission cross-section ratios Pu^{239}/U^{235} for various lattices 0=2692
 effective resonance integral, allowance for fuel geometry 0=13316
 effective resonance surface, formulation 3=2524
 for electricity, direct conversion, coupled to m.h.d. generator 4=18669
 for electricity, direct conversion from ionized gas 4=18417
 electricity from fission heat by thermionic cell 0=265
 electricity by thermionic converters 0=264
 electronic simulator, at Czech. Inst. Nuclear Physics 1=761
 electronic simulator, Polish 1=759
 elimination of radio-Xe, Kr, by thermal diffusion 0=961

Nuclear reactors, fission—contd

encyclopaedia of nucl. energy 3=4285
 end-leakage calculations, homogenization approx. validity 2=3650
 enriched lattices, minimum loading conditions 0=13336
 enriched U and UO_2 lattices, water moderated, f, p and ϵ meas. 0=13339
 enriched UH , critical assemblies 1=13898
 epithermal, control rod worths 3=15266
 epithermal neutron spectrum, meas. 3=25026
 epithermal effects on control element worth 0=7663
 epithermal, variable density, minimum critical mass. 2=6017
 escape probabilities, asymptotic reactor theory 2=6024
 excess reactivity indicator 2=6073
 excursions at low flux levels, detection 2=10189
 experimental Breeder Reactor, Idaho, neutron spectra meas. 0=12999
 experimental reactor VVR-S, study 1=750
 explosive metal-water reaction temps. 2=4540
 exponential column flux, radial mode separation, teaching demonstration 4=6446
 extrapolation length, linear, of infinite plate with "can" on both sides 2=1944
 FRJ-1 Merlin, critical masses for core configs. 3=4692
 FRJ-1 Merlin, neutron flux distrib. 3=4691
 FRJ-1, subcritical experiments 2=12258
 fast breeder systems, calculational survey 1=17220
 fast breeders, liq.-Na cooled, friction of immersed metals 3=1249
 fast ceramic reactor development 2=22864
 fast effect in lattice reactors 0=13317
 fast effect, Spinrad three-group theory 1=13887
 fast fission activation of U^{238} foils 2=12252
 fast fission effect, meas. method 2=16456
 fast group constants, variational procedure for calculation 3=25003
 fast, with low fuel concns., projected 3=2523
 fast-neutron detection 0=20162
 fast neutron flux meas. 3=10430
 fast-neutron impulse reactor, impulse amplitude, statistical spread 2=22869
 fast power reactors, analogue calc. of nonlinear kinetics and stability 1=7414
 fast, Pu-fuelled, breeding ratios, costs 3=22458
 fast, pulsed operation, parameters for nuclear research 2=3654
 fast reactor control rod effect, calc. 2=16458
 fast reactor rocket engines, criticality 2=20698
 fast reactor for sea-water distillation 3=19902
 fast reactors, book 1=12233
 fast reactors, high burn-up 2=3653
 fast, two-zone, averaging of multi-group constants 2=12255
 fast, in U, Be, system, Monte Carlo calc. 2=6014
 fast, world survey in tabular form 3=6319
 feedback dynamics, using elec. analogue 3=10426
 Fermi age computation by Monte Carlo method 1=7416
 Fermi age, moments calcs. 2=16203
 fin cooling efficiency 0=6976
 fine flux meas., analysis in concentric annuli fuel elements 3=10409
 fins, triangular, temp. distrib. and heat flow 3=3908
 first-collision probabs. for linearly anisotropic flux distrib. 3=25009
 fission chamber for neutron beam monitoring 2=3670
 fission-fragment energy converters for space vehicles 4=446
 fission gas re-solution 2=12270
 fission neutron age in water 2=5985
 fission product poisoning evaluation 2=16455
 fission product trapping, Cs sorption 2=6857
 fission ratio for configurations of UO_2 rod clusters 2=20699
 flat flux by nonuniform moderation 1=17194
 flattened, multigroup theory application 1=17224
 fluid fuel, aq. homogeneous and molten salt types 2=14173
 flux calc., Wigner effect 2=22865
 flux changes in Calder Hall type 0=7656
 flux disadvantage factor, plane slab lattices 0=13341
 flux distrib. during fuel burnup, analysis 3=24998
 flux meas. by activated steel wires 2=12262
 flux meas. with ion-chamber systems 2=12264
 flux meas. by semiconducting detector 2=12263

Nuclear reactors, fission—contd

- flux perturbation by ion and fission chambers 0=15621
 flux ratio calcs. in lattices, integral transport theory 2=20704
 flux shape changes due to added reactivity, time-dependent analysis 0=13352
 flux synthesis, new methods 2=14164
 Fokker-Planck eqn. and autocorrel. function 2=1945
 Ford, pile oscillator 0=4144
 fragment trapping by ThO₂ slurry particles 1=785
 France, review 0=5815
 fuel assemblies, vib. frequencies, critical coolant flow velocities 2=16460
 fuel behaviour when coolant boils 3=4689
 fuel bursts, Cherenkov counter detection 1=19571
 fuel cans, steel, bursting strength 2=23779
 fuel cell and Carnot cycle 0=3695
 fuel charging, formulae 2=20725
 fuel clusters, resonance integral calc. 3=2514
 fuel cycle analysis, B. method, validity 1=3483
 fuel cycle analysis, computer code FUELCYC 2=6066
 fuel cycle analysis by series methods 0=13387
 fuel cycles, conference, London (Jan., 1959) 0=5813
 fuel defects, detection by fission gas emission 2=20692
 fuel diluent BeO, thermal props. 2=3845
 fuel element containers, thermal shocks 2=12269
 fuel element, epithermal flux distortion by probes of different layers 4=6429
 fuel element failures, detection 0=11473
 fuel element geometry, optimization, criterion 2=3645
 fuel element resonance absorption, spatial distrib. 1=19558
 fuel element screening 0=9720
 fuel element technology 0=11472
 fuel element, thermal neutron spectrum 3=10408
 fuel elements, cylindrical, transient temp. distrib., calc. 2=6031
 fuel elements, extrapolation length, var. calc., appl. 4=9611
 fuel elements, neutron spectral shift eval. 3=2525
 fuel elements, non-destructive testing 0=2697
 fuel elements, polyzonal spiral, heat transfer 3=4698
 fuel elements, stacked, creep buckling 2=4331
 fuel elements, stresses in tubes under heat generation, appl. 1=20341
 fuel elements, temp. and heat flow distrib. calc. 2=8046
 fuel elements, thermal stresses in, calc. 0=12989
 fuel elements, thermoelastic dynamics 2=8049
 fuel elements, wall temp. meas. 2=3675
 fuel failure precipitator monitor 1=13904
 fuel, irradi., power and burn-up, meas. 3=19907

 metallurgy 0=4834
 metals, aqueous corrosion, review 3=695
 metals, pure, damage rel. to neutron flux 3=2847
 migration areas and effective delayed neutron fractions 1=782
 minimum total mass reactor design 0=15612
 model bed, neutron space-energy distrib. meas. 4=15257
 model of xenon poisoning 1=3486
 moderating materials, mixtures, U^{238} absorption 2=8026
 moderation, heterogeneous media calc. 2=6034
 moderator coeffs. rel. to model and cross-sections 3=8155
 moderator-cylind. fuel system, first-flight collision probab. 3=19911

Nuclear reactors, fission—contd

moderator density spatially variable, soln. of reactor eqns. 2=18378
 moderator, heavy-gas, neutron spectrum 2=1951
 moderator, liquid, radiation nucleation of bubbles 3=23864
 moderator and U fuel regions separate 2=20697
 moderators and absorbers, abs. cross-sect. of free proton model 3=22460
 moderators, homogeneous, neutron slowing-down distrib. 4=17218
 moderators, organic cpds. as 1=17245
 moderators, small, low temp. for cold neutron beams 2=6037
 moderators, thermal-neutron scatt. 2=20345
 monoenergetic neutron transport, in spherical geometry, Boltzmann eqn. 1=8604
 multigroup bucklings, iteration method of specification 1=778
 multi-group diffusion equation, soln. for reactors of circular and spherical symmetry 1=3487
 multigroup diffusion eqns., computer programme 2=20715
 multigroup-multiregion diffusion eqns., soln. by expansions 1=17200
 multigroup theory in neutron spectrum 1=17224
 multilayer slab systems, critical problems 1=17183
 multiplication const., terminology discussed 1=13424-5
 multiplication factor, thermal utilization for cylindrical cell 2=6016
 multiplication factors, relation to inhour equation 1=13890
 multiplication parameters η , meas., from Xe poisoning 3=25008
 multiplying assembly, probab. distrib. 3=10404
 multiplying core, time dependence of buckling 1=3190
 multiplying systems with heavy water moderators, surface blocking meas. 4=3723
 multi-region multi-fuel, reactor kinetics 1=767
 NPD, operation 3=15264
 NRU, clean-up after fuel rod failure 0=5823
 NRU, fuel rod failure, due to waterlogging 0=5824
 NRU (Harwell), scatt. law expt. 2=22526
 NRX reactor, $B^{10}(\alpha, n)N^{13}$ and $B^{10}(t, 2n)C^{11}$ reactions 1=19529
 natural U graphite, long term irradiat. effects 2=10190
 natural uranium and light water, subcritical assembly 1=19567
 negative reactivity measurements 1=17242
 neutron absorbers, self-regulation, theory 2=12245
 neutron absorpt., generalized resonance integral represent. 1=17240
 neutron age in D_2O-H_2O mixtures 1=3191
 neutron attenuation in iron-water shields, calc. 2=20712
 neutron backscattering from plane and spherical reflectors 4=21860
 neutron beam producer, intense 3=22450
 neutron beam tube in FRM reactor 2=10187
 neutron beam from WWR-S reactor, spectrum 2=1949
 neutron chain reactions, statistical theory 3=12717-18-19
 neutron collision probability in cylind. cell 2=10175
 neutron cross-section meas., by reactor osc., EWA reactor 4=9530
 neutron data for reactor kinetics 3=17509
 neutron decay in subcritical assembly 3=12727
 neutron density and "importance", variational representations 1=17189
 neutron density standard, graphite cylinder with cavity 4=27867
 neutron diffusion calculations, graphical methods 2=3646
 neutron diffusion cooling in finite moderator 0=7373-4
 neutron diffusion cooling in finite solid moderator assembly 0=20528
 neutron diffusion, one-group, time-depend., extrapolation length 2=7863
 neutron diffusion parameters, diphenyl and MIPB($C_{12}H_{10}$) 4=3758
 neutron diffusion in reproducing media multigroup treatment 0=7356-7
 neutron diffusion, single-group theory 1=13889
 neutron diffusion, two-group, matrix formulation 2=6001
 neutron diffusion in two-temp. lattice, thermalization theory 2=20348
 neutron diffusion in U-water lattice 0=7365

Nuclear reactors, fission—contd

neutron distrib. meas., use of neutron effects on Ge 2=8044
 neutron distrib., statistical fluctuations 3=2528
 neutron distrib., thermal, in a subcritical flux trap assembly with spontaneous fission source 4=6428
 neutron distribution, near partially inserted black rod 2=1946
 neutron dosimetry, pile oscillator appl. 2=14179
 neutron effective reson. integral meas. on U and Th 3=2544
 neutron effective temperature, definitions 4=1152
 neutron energy spectra, rel. to displacement damage 3=17517
 neutron fluctuations, cellular structure reactor 3=10412
 neutron flux calc., "multichannel synthesis" 2=10170
 neutron flux at cylindrical surface due to activity in water 1=17185
 neutron flux, distrib. and reactivity, long-term variations 4=1140
 neutron flux, effect of cylindrical channel 2=3664
 neutron flux, elec. analogy of transmission line, teaching 2=5996
 neutron flux flattening in large and small reactors 3=4686
 neutron flux gradients, automatic meas. 1=5955
 neutron flux meas., absolute determ. 2=20719
 neutron flux meas., Co self-shielding factors 2=20644
 neutron flux meas., Dy foils 3=2283
 neutron flux meas. in EWA reactor 2=14180
 neutron flux meas., foil activation expts. 2=5681
 neutron flux meas., P-polythene mixtures 3=2284
 neutron flux meas. by "thin-film capture" using U^{238} and Th^{232} fission 4=3430
 neutron flux monitoring by mica fission-track prod. 4=28091
 neutron flux in multiplying medium due to source introduction 1=3491
 Neutron flux at a point, Monte Carlo estimation 3=24739
 neutron flux in polyethylene moderated medium 3=19908
 neutron flux in reflector, multigroup calc. 0=12966
 neutron flux spectrometer, fast 4=28092
 neutron flux and spectrum meas. 3=19912
 neutron flux, thermal, meas. 1=13907
 neutron fluxes, time dependent 0=7355
 neutron and γ -ray data 3=17510
 neutron high flux detector 4=6081
 neutron-induced, cross sections at 3 MeV, calc. 2=5982
 neutron intensity meas. with Au and S probes 3=25018
 neutron kinetic eqns., standard curves 3=10417
 neutron kinetics formulation 1=19557
 neutron kinetics in nonmoderating assemblies 3=17287
 neutron kinetics simulation with RC network 3=10406
 neutron leakage through iron shielding 0=13360
 neutron leakage through voids 1=19564
 neutron multiplying systems, spiking theory 1=17187
 neutron net current in asymmetric thin regions 3=4683
 neutron poisoning, by gaseous fission products 0=7665
 neutron pulse in moderators, theory 3=25004
 neutron resonance absorpt. in lumps with nonunif. temp. distrib. 3=6323
 neutron resonance absorption, theory 1=3488-9
 neutron resonance absorption, in U and UO_2 1=16810
 neutron resonance capture in bundle arrangement of fuel elements 1=3485
 neutron resonance escape prob. in slab lattices 0=4152
 neutron scattering in cylindrical absorbers 0=11177
 neutron shielding materials, data tabulation 2=3668
 neutron slowing down in infinite media 1=19562
 neutron slowing-down length in water 0=3975
 neutron slowing-down relaxation time, in moderators 0=7371
 neutron slowing down as stochastic process 2=11957
 neutron slowing-down in water, rel. to inelastic scattering in U 3=2275
 neutron source in just-crit. reactor, meas. uses 4=28093
 neutron spectra det. with threshold detectors 1=13908
 neutron spectra, fast reactors, parametric representation 4=1135
 neutron spectrum, conversion to fission, by U 4=1167
 neutron spectrum, fast, high power, RA reactor 4=9616

Nuclear reactors, fission—contd

neutron spectrum, meas. using fast chopper 1=13448
 neutron spectrum temp. distrib. in heterogeneous systems, calc. 2=5682, 9856
 neutron surface leakage calculation 0=4145
 neutron telescope monitors 3=6331
 neutron temp. distrib. in cylinder of hot moderator 3=25001
 neutron temp. distrib., scatt. sample effects, WWR-S reactor 4=12314
 neutron temp. meas. 1=17233
 neutron temp. meas. by Lu activation 3=22461
 neutron temp. of a moderator composed of small regions at various temps. 0=5822
 neutron temperature spatial dependence in moderators 1=3192
 neutron thermal flux in cell with temp. discontinuity 2=8030
 neutron thermalization, characterization 3=2527
 neutron thermalization and diffusion 2=5657
 neutron thermalization in lattice, theory 3=10410
 neutron thermalization, space-energy distrib., in heavy media 0=1453
 neutron thermalization, time decay consts. 3=8167
 Neutron time-dependent thermalization problem 3=24738
 neutron transmission methods, data handling on IBM 7090 computer 2=9865

 review article, covering European work 1=13874
 review, historical account 3=2512
 review of recent ideas 1=754
 rock vessel reactor power plant, 235 MW 3=4684
 for rocket propulsion 3=16434
 rod absorption factors by absorption area method 0=12985
 rod-drop expts., kinetic eqn. 2=10176
 rod-type fuel element, transient temp. distrib. 2=8050
 Rossendorf reactor, operational experience 3=25024
 Roumanian Inst. of Atomic Physics, 2000 kW reactor, transient states, calc. 0=20522
 SM-2, flexible critical expts. 2=3644
 SR-1 heterogeneous subcritical assembly, investigation 1=13875
 SRE, failure due to coolant contamination 0=5828
 SRE prompt power coeff. 3=6333
 Saclay, reactor incidents 0=9717
 safety policy in Canada 1=2253
 safety of start-up, rate and period meters 2=6071
 safety of UO_2 - ThO_2 - H_2O systems 2=3658
 sampled flow of random pulses, counting rate, errors 4=28089
 samples, irradiated intermittently, activity 2=20711
 SANDPIPER I programme for liquid-moderated UO_2 lattices 2=20710
 sandwich reactor, effective thermal diffusion length 0=7662
 "sandwich" reactors, exact two-group diffusion theory 2=10177
 scram system, hydrodynamics 0=13372
 screening meas. for type WWR-S 3=25019
 second fundamental theorem, validity 1=17192
 sectionalized systems, k_{eff} and burn-up 2=8038
 sheath rupture detection, numerical control 1=7417
 sheath rupture detectors 1=2257
 shield, power-producing 3=22454
 shielding calc., hydrogen-free "removal cross-section" method 3=17515
 shielding damage due to fast neutrons, determ. by dosimeter 3=10423
 shielding, effect of B carbide on (n, γ) reaction in steel 2=8045
 shielding, for linear source, shape 2=6052
 shielding materials, review 3=2539

Nuclear reactors, fission—contd

shielding, model experiments 3=4693
 shielding of neutron point sources, by metal/
 hydrogenous shield 4=12318
 shielding props., different types of concrete 2=14177
 shielding studies using neutron beam facility 2=18385
 shielding, temp. and stress distrib. 1=777
 shielding, two and three-group calcs. 3=17511
 shields, metal—water, thermal neutron flux
 distrib. 1=17237
 shields, neutron penetration 4=21875
 short time behaviour calc. 0=4150
 shut-down bubble detection following power burst 2=11453
 shut-down circuits 3=10425
 shut-down reactor as strong γ -ray source 3=25014
 Siemens Argonant, Rossi- α meas. 4=28094
 signal-flow graphs and stability analysis 1=8803
 siting and building 1=17225
 Sizewell reactor transients 3=22455
 slab geometry, disadvantage factors, conveyance
 improvement 3=12724
 slab geometry, thermal flux disadvantage factors 2=12247
 slab lattices, epithermal flux 3=15254
 slow neutron flux meas. 2=6072
 small cells, failure of neutron transport approx. 2=6013
 sodium graphite reactor programme 3=2542
 solid dielectric irradiation methods 2=10183
 solid moderator assembly, thermal neutron energy
 distrib. 1=16794
 source of discrete γ -rays up to 11 MeV 2=5612
 Soviet research reactor SM, 50 MW, design 3=10421
 for space propulsion 1=15578-81
 space-time kinetics by modal expansion, finality 2=6005
 space-time neutron kinetic eqns., semidirect variational
 method 2=16452
 spatial dynamics, transfer function synthesis 3=2531
 spatial stability criteria 3=15256
 spatial transients due to homogeneous slab gaps 0=15629
 spatially dependent thermal spectra, calc. 2=6018
 specific activity of fluid circulating through reactor 0=2703
 spectrum analyser, 10^{-3} –30 c/s 3=24161
 split core, slow-neutron spectrum meas. 3=6334
 square lattice cell theory, evaluation of series 2=3647
 square lattice cell, thermal utilization 4=28086
 square lattices, two-group plane boundary
 conditions 3=8154
 stability, effect of delayed neutrons 1=17209
 stability, homogeneous reactors, nonlinear reactivity
 temp. dependence 2=6029
 stability in the large and boundedness of models 4=3746
 stability of n -th spatial mode, crit. size 2=14167
 stability, nonlinear dynamics, for stationary
 systems 1=17202
 stability, nonlinear, investigation for reactors and control
 systems 2=10166
 stability, nonlinear, theory 1=8802
 stability, problem of Xe^{135} , modal interaction 2=20703
 stability, use of two-parameter diagram 0=17642
 stainless- UO_2 cermet fuels, burnup 1=13880
 starting, automatic system 1=2260
 start-up incident calc. 0=2699
 startup of low source reactors, neutron kinetics 3=12734-5
 start-up of reactor, safe procedure 0=11474
 start-up simulator 2=6032
 steady states, positive reactivity coeffs. 2=3660
 steam generating, fog flow conditions 3=10420
 stochastic kinetics 3=2529
 subcritical assemblies, with spontaneous fission
 source 0=13334
 subcritical assembly, description 3=25011
 subcritical assembly, flux distrib. calc. 2=12242
 subcritical assembly, material buckling measure-
 ments 1=779
 subcritical D_2O lattices, pulsed neutron expts. 3=19909
 subcritical homogeneous suspension reactor,
 instrumentation 0=13382
 subcritical, reactivity meas. 3=10428
 subcritical reactivity meas. by source-jerk
 method 3=8153
 subcritical reactor as a college facility 0=5814
 subcritical, space-dependent prompt kinetics 1=13882

Nuclear reactors, fission—contd

subcritical system, interaction study, albedo
 method 2=22868
 surface film formation 2=6042
 surface perturbation theory for reactivity
 determination 1=17190
 suspension, stability theory 3=22445
 Swedish heavy-water R1 reactor, slow-neutron
 spectrum 0=7654
 Swedish zero-power reactor R0 0=4140
 swimming bath reactor, epithermal and fast neutrons,
 spectral distrib. 2=3672
 teaching, German 4=15252
 teaching, Scottish 4=15251
 technology, advances, book 3=2511
 temp. coeff. calc., two-group albedo theory 0=13353
 temp. distrib., in coolant channels, vector diagram 0=5830
 temp. distrib. in a finite unsheathed cylinder 0=1460
 temperature coeffs., effect of reflector 3=12720
 temperature histories of thin internally-heated
 bodies 2=22079
 test explosion, generation of elec. current 2=5991
 tests, out of pile, simulation of heat rating 1=17231
 theory and expt., teaching 2=5995
 theory, mathematical problems 0=17640
 theory, two-group, modification, additional
 group 3=24999
 thermal activation calcs., one-group model 2=8029
 thermal changes at centre, analogue representa-
 tion 2=12243
 thermal column, branched, flux distrib. 2=16448
 thermal, Doppler effect 2=3676
 thermal flux perturbs., probe-induced 3=12726
 thermal neutron diffusion, effect of Bragg cutoff,
 calc. 2=5662
 thermal neutron distribution, spatial and energy
 depend. 1=17206-7
 thermal neutron flux distrib., in space and energy 1=17214
 thermal neutron flux increase by internal thermal
 columns 2=20716
 thermal, neutron lifetime and reactivity, meas., by
 Rossi α -method 4=1166
 thermal neutron scatt. by moderators, data and
 theory 2=11948
 thermal neutron spectra in lattices, ang. depend. 3=12723
 thermal neutron spectra spatial dependence, rel. to
 thermal utilization factors 2=8039
 thermal neutron spectra, spatial dependence and thermal
 utilization meas. interpretation 2=16453-4
 thermal neutron spectrum, integral eqn. 3=12721
 thermal neutron transport, few-group calc. 2=5959
 thermal neutron transport in heavy gas moderator,
 theory 2=10171
 thermal, Pu fuel cycles 3=22459
 thermal processes in reactor core, sol. of eqns. 2=16450
 thermal, reactivity calc. with resonance fission 2=6011
 thermal, relative worth of control
 materials 1=11053-4
 thermal systems, Sn computations 1=13885
 thermal utilization factor of a close-packed lattice 0=7660
 thermal utilization factor determ., method 0=7659
 thermal utilization factor theory, infinite slab
 geometry 1=13881
 thermal utilization, flux ratios, in complex
 lattices 3=8158
 thermal utilization, in lattice cell with bare fuel
 element 1=776
 thermal utilization, Monte Carlo calc. 0=15615
 thermal utilization in a rectangular cell 2=6028
 thermalization, diffusion of neutrons 2=18128
 as thermionic heat convector, review 2=15880
 thermocouple, weakened, for fuel cells 4=28095
 thermodynamic behaviour, mathematical theory 0=20529
 thermodynamic cycle, optimum, approx., power
 station 3=6321
 threshold detectors, fast neutron flux meas. 2=22537
 time-dependent eqns. reduced to ordinary differential
 eqns. 2=6007
 time-dependent thermal neutron diffusion equations,
 solution 0=12956
 Tokyo sub-critical assembly, neutron lifetime,
 Rossi- α -method 4=12325

Nuclear reactors, fission—contd

transfer cross-section between overlapping thermal groups 3=8168
 transfer function meas., non linear 4=17233
 transfer function of steadily diverging reactor 0=7669
 transfer functions of distributed parameter reactor systems 0=13320
 transfer functions, statistical correlation methods 2=8032
 transfer functions from steady operation meas. 0=13319
 transfer functions, theory and applications 2=14161
 transient effects, simulation 0=12535
 transient heat conduction, responses, transfer functions 2=3663
 transient operation, by analogue VVR-S 3=25022
 transients in log count-rate and period meters 1=2932
 transients, space-independent kinetics, exact theory 3=6328
 transport equation for critical assemblies, S_0 technique 0=13340
 transport eqn. for plane cell, sol. 2=8033
 transport problems in multigroup theory 0=1284
 transuranic element buildup, effect of U recycle 0=13364
 TREAT, meltdown tests of EBR-2 fuel 0=15624
 T.R.E.A.T., progress report 1=12234
 Triga, counting-rate channel 1=18733
 TRIGA Mark II, prompt temperature coefficient, Pu conversion effect 3=12731
 two-dimensional theory, analytic approach 3=6325
 two-group reactor kinetics 2=22871
 two-region reactor fuel elements, transient temp. distribution analysis 1=773
 two-zone reactor, theory, design and control 4=1138-42
 USSR first station, active contamination of steam—water loop 4=3755
 Ulysses, neutron fluctuations, expt. results and interpretation 2=22872
 unmoderated assemblies, neutron spectra measurement 1=13899
 uranium reserves in U.S., operating costs 2=3643
 α -uranium, swelling due to irradiation 2=3674
 VVR, fast neutron spectrum and thermal flux distrib. 2=18384
 VVR-M, horizontal channel, γ -ray spectrum 2=14170
 VVR-M, physical parameters 2=18387
 VVR-S, cooling water activation 2=6047
 VVR-S, critical dimensions, kinetic props., modification 2=20720
 VVR-S, exptl. reactor 3=12730
 VVR-S, flux meas. around horizontal canals, rel. to protection 2=6057
 VVR-S, flux meas. near horizontal channels 2=6049
 VVR-S, meas. of neutron absorption by oscillator method 2=6046
 VVR-S, neutron flux and γ -ray distrib. 2=6056, 8043
 VVR-S, neutron temp. distrib. meas. 3=25017
 VVR-S, for pile oscillator method 2=6055
 VVR-S, pile oscillator method problems 3=25021
 VVR-S, reactivity variations 3=25020
 VVR-S reactor, Roumania; neutron spectrum 1=5954
 VVR-S, start-up automatization 2=6044
 VVR-S, thermal flux in perturbation expts. 2=6045
 VVR-S thermal neutron flux determ. by perturbation expts. 2=6058
 VVR-S, water, impurity build-up 2=6048
 vapour void profiles in heated channels 2=11516
 variational principle for nonlinear systems 2=6030
 vel. depend. neutron transport with high-energy sources 3=10126
 voids between core and reflector, reactivity theory 2=8027
 volatilization of by-products, diffusion from graphite 2=6370
 WWR-S reactor, Bucarest, thermal neutron spectrum 1=3481
 WWR-S reactor (Poland), automatic control 1=17243
 water behaviour, primary circuit 2=6059
 water-boiler (KEWB) at high power excursions, dynamics 4=3748
 water boilers, radiolytic yields of N_2 and H_2 0=13370
 water cooled, F^{18} activity, meas. 2=20718
 water-cooled and moderated, neutron spectrum 1=7413
 water cooling, flow stability 0=6749
 water cooled, flow stability 2=12259

Nuclear reactors, fission—contd

water gap peaking, few-group theory 1=17213
 water-graphite moderated lattice, thermal utilization factor 1=19559
 water moderated, effect of Eu resonances on temp. defect 0=13327
 water-moderated critical system type ZR-1 3=25010
 water-moderated lattices, Dancoff correction, new formula 2=6064
 water moderated, neutron spectrum 0=7386
 water, radiolysis 3=15265
 water reactors for power generation, symposium 3=10402
 water solutions, $U^{233,235}$, Pu^{239} , critical dimensions 2=5976
 Welton's stability criterion 0=2701
 Wigner's contributions to theory and technology 3=6320
 wire activity, automatic recording 4=1153
 worth of cylindrical control rods 2=6033
 xenon poisoning, influence on control, security 2=14172
 xenon spatial instability 2=12251
 Yankee, description 1=11050
 Zebra, zero power fast reactor 3=2518
 Zephyr, neutron lifetime measurements 1=766
 zero-energy, fast neutron flux meas. 3=22149
 zero energy fast, VERA, neutron spect. meas. in core 4=25469
 zero energy reactor "RB" 0=20519
 zero energy reactor "RB", safety-rod effectiveness 0=20521
 zero power kinetics, oscillator bias and freq. response 2=12246
 zero power, neutron population fluctuations 2=22870
 zero power reactor transfer function 1=756
 Zeus, neutron lifetime measurements 1=766
 zirconium hydride water-moderated reactor, transient behaviour 0=15631
 zonal profiling calc. method for power optimization 2=18376
 A^{41} activity as neutron flux meas. 2=12261
 Au, by heavy ions, momentum transfer 2=5984
 B, standards for slow-neutron absorption cross-sections 2=7866
 Be, irradiated, mechanical props. 2=4338
 Be moderated reactor, ($n, 2n$), (n, α) reactions 1=13817
 Bi, by heavy ions, momentum transfer 2=5984
 Bi preparation, for liquid-metal reactor 0=7673
 $Cd_3Ta_2O_7$ as control material 3=4699
 D_2O -cooled, temp. transients of outlet water of fuel element 3=4697
 D_2O lattices, K_{∞} , multigroup diffusion calc. 0=15616
 D_2O -moderated lattices, multiplication factor 2=10164
 D_2O moderated, wet steam cooled, critical size calc. 0=11470
 D_2O - U^{235} critical assemblies, few-group anal. 1=17199
 H_2O - D_2O moderated, cost of D_2O 2=3669
 H_2O - D_2O moderating mixture 3=6335
 H_2O - D_2O moderated, Dancoff effect, expt. 1=17212
 H_2O - D_2O moderated reactor 1=17197
 Hf control rod worths, epithermal parameters 0=13378
 Hf control rods, mechanical properties 0=15635
 Ho, by heavy ions, momentum transfer 2=5984
 Mg-Zr alloy ZA, creep at 400° and 450°C in CO_2 3=25629
 Mg-Zr alloys, heat treatment in H_2 for creep ductility improvement 3=25763
 N_2 boiling, elec. resistance 2=6051
 Na-cooled, release of fission products 3=21007
 Na, molten, heat transfer in staggered tube bank cross-flow 3=16816
 Nb alloys as high-temp. core materials 1=5952
 $Ni^{58}(n, p)$ reaction as fast flux monitor 2=5941
 Pm^{147} poison, neutron activation cross-sections 2=12204
 Pu breeder with oxide fuel and blanket elements 0=13315
 Pu carbides, props. (nuclear engng. data sheet) 1=4168
 Pu-enriched, effect of res. absorption in Pu^{239-41} 0=7658
 Pu spherical fast reactor, effect of alloying on critical mass 0=13328
 Pu thermal reactor, neutron study 3=10422
 Pu^{239} -fueled, breeding ratio 1=17198
 $Pu^{239}(n, f)$ reaction rate distrib., neutron leakage 2=3671
 Pu^{239} in irradiated-U BR 1 at Mol 2=6069
 $Pu^{239,241}$, resonance fission integrals 2=5979
 Pu^{240} effective cross-section for reactivity calculations 0=13354

Nuclear reactors, fission—contd

- Pu²⁴⁰ as fuel in near-thermal burner reactors 2=8049
 Pu²⁴⁰ fuel in near-thermal convective reactors 2=8047
 Pu²⁴⁰, possible use as fast reactor fuel 2=12232
 Pu²⁴¹, by neutrons, at 0.25–21 MeV, cross-sections 2=5982
 Pu²⁴¹, total neutron cross-section, low energy 2=5980
 PuC, 42–60 at.% C, fuel, prep. and props. 3=10431
 Th fuelled, specific power and fuel reactivity 2=6063
 Th²³², fast neutrons, meas. of prompt neutrons 2=5981
 Th²³² irradiated long-term reactivity changes 2=3673
 Ti and Fe containers for irradiated samples 3=19905
 U, Be, systems, fast effect, Monte Carlo calc. 2=6014
 U carbide effective resonance integral 0=20499
 U carbides, props. (nuclear engng. data sheet) 1=4168
 U, crack-formation by post-irradiation thermal cycling 2=8751
 U fuel elements, crystal texture 2=4367
 U/graphite cells, fast neutron effects 3=10419
 U-graphite fuels, fission products loss 3=12737
 U-monoisopropylidiphenyl lattice, subcritical, n spectrum 3=25029
 U, natural, light water lattices 1=19560
 U, reactivity life in U–D₂O reactor 1=2252
 U rod geometrical optimization for various moderators 2=6070
 U rod, resonant neutron capture distribution 1=783
 U rod, transient temperatures 1=772
 U-water, control response, temp. coeff. 2=6054
 α-U thermal cycling, fuel choice and working conditions 0=13570
 UC as fuel for Na-cooled reactors 1=13905
 U–D₂O systems, review 1=2251
 U–H₂O lattice, sub critical, n spectrum 3=25029
 UO₂ as reactor fuel, Swedish investigations 1=3480
 U²³³ breeder core heavy isotope buildup 0=4147
 U²³³ breeder–U²³⁵ converter reactor 0=13309
 U²³⁵ burn-up, effect of temp., by-products 3=2534
 U²³³ fast breeder, effect of Pu²³⁹ build-up 3=6332
 U²³³ fuel for AETR critical expts. 3=15267
 U²³³ fuel, neutron total cross-section, 3.4–1611 keV 2=14119
 U²³³–fuelled, breeding ratio 1=17198
 U²³³, η values 2=6008
 U²³⁵ cross-section, 0.01–0.1 eV, 2200 m/sec neutrons 2=5983
 U²³⁵ fission neutrons, age in metal-water lattices 2=5680
 U²³⁵ fission products, thermal neutron reactions on, calc. 1=19572
 U²³⁵ fuel elements, Doppler temp. coeff. 0=15625
 U²³⁵, by neutrons, at 10–21 MeV, cross-sections 2=5982
 U²³⁵O₂–H₃PO₄ solns, critical measurements 0=13365
 U²³⁵ poisoning, product energy dependence 0=4148
 U²³⁵ and Pu²³⁹ critical assemblies, neutron spectra 1=17219
 U²³⁵, resonance fission integral 2=5979
 U²³⁵, resonance integral in homogeneous mixture and fuel lump 2=22857
 U²³⁵, by thermal neutrons 2=5978
 U^{235, 238} (n, f), reaction rate distrib., neutron leakage 2=3671
 U²³⁸, fast neutrons, meas. of prompt neutrons 2=5981
 U²³⁸ foils, bare and Cd-covered, activation 3=8166
 U²³⁸, by heavy ions, momentum transfer 2=5984
 U²³⁸ lattices, resonance escape probability, meas. 1=17248
 U²³⁸ resonance integral calc. 2=10150
 U²³⁸ rod, light water moderator, resonance neutron capture 2=3061
 UC as fuel, neutron irradiation results 2=6065
 UC as fuel, props. and preparation 0=20524
 UC₂–Al plate-type fuel elements 0=9722
 U–D₂O lattices, fast fission effect 0=13350
 U–Nb fuel plates, resonance, U²³⁸ activation 2=22874
 UO₂ fuel, distrib. of fission products and plutonium 2=12235
 UO₂ fuel elements in SRE core, transient thermal behaviour 2=20726
 UO₂ fuel elements, temp. distrib. 3=10432
 UO₂ fuel rods, U²³⁸ resonance neutron capture 2=5945
 UO₂ lattices, liquid-moderated, analysis programme (SANDPIPER I) 2=20710
 UO₂–NaK fuel slurries, behaviour 0=14143

Nuclear reactors, fission—contd

- UO₂ rods, temperatures, thermal stresses and displacements 0=6962
 UO₂–Si, Zr or Th cermet, study 0=6533
 U₃O₈, photofission 2=5990
 U and Pu fuel in water, neutron thermalization calc. 0=12991
 U, and UO₂, enriched water-moderated lattices, flux distributions 0=13344
 U to Xe¹³³, in meteorites 0=4883
 Xe-controlled, dynamics, space-independent 1=17208
 Xe controlled, temp. effect, stability 2=6015
 Xe build-up after shut down, absorbed radioactivity calc. using sliderule 0=9723
 Xe spatial oscill., flux threshold 3=4682
 ZOE reactor, neutron spectra, emulsion meas. 0=12792
 Zr data manual 2=22875

 BeO, neutron slowing down spectrum calc. 4=21876
 BeO, sintered, neutron diffusion meas. 4=21866
 C, pyrolytic, coating on fuel particles, hardness meas. 4=13400
 D₂O, neutron scattering, 22° and 150° C 4=21862
 D₂O, thermal neutron diffusion parameters 4=6064
 H₂O, neutron pulse parameters, temp. var. 4=17221
 H₂O, thermal neutron spectra 4=17223
 K, boiling, as working fluid for light space systems 4=12322
 Mg-Zr(0.5 wt.%), cracking in traces of moisture, in reactors 4=20667
 Nb-U alloys, radiation effects 4=9613
 NH₃, liquid, as moderator, thermal neutron diffusion coefft. 4=21865
 Ni₃Fe, neutron irradiation resist. rel. to impurity 4=7276
 Pu, δ and η , lattice structure and thermal expansion 4=7638
 Pu, utilization 4=17228
 Pu-Al rods, resonance integral for Pu²⁴⁰ 4=3740
 Pu-C, < 50 at % C, phase diagram, 500-1500°C 4=7508
 Pu²³⁹, thermal neutron fission cross-sections 4=17209
 SiC, prodn. and props., bibliography 4=5000
 Th, Doppler effect meas. in fast neutron energy spectrum 4=6418
 U, α , swelling, rel. to burn-up and temp. 4=6440
 U carbides, use as fuels, fabrication methods 4=13611
 U content in flat fuel elements, determ. by γ -ray absorption 4=6442
 U, fission, proton induced 4=17213
 U, irradiation growth rates 4=22654
 α -U, mechanical props, tensile, effect of grain shape 4=7463
 U (natural) heavy water, increased conversion factors 4=1142
 β -U, tensile props., rel. to strain rate and temp. 4=20689
 U^{233,235}, fission, channel effects 4=17211
 U²³⁵, number of neutrons from fragments 4=25442
 U²³⁵, ternary fission by slow neutrons 4=17210
 UC fuel particles, fission-gas release 4=17226
 U-Mo alloys, deformation mechanisms 4=20687
 U-Mo alloys, tensile tests 4=20686
 U-Mo(1-3.5 wt. %), phase transformations, γ + β and γ \rightarrow α 4=7518
 UN, prod., and U-N phase diagrams 4=12321
 UO₂, fission gas transport, Ar-CaF₂ model 4=25466
 UO₂ fuel pins, betatron radiographs 4=9614
 UO₂, over-sintered, grain-boundary precipitates in 4=7680
 UO₂, pellets, nitrogen release at high temp. 4=12323
 UO₂, structure of heat treated crystals 4=7679
 UO₂, thermal cond. changes at high-temp., theory 4=12664
 UO₂(NO₃)₂ aqueous solutions, critical parameters 4=12316
 U-Zr alloys, phase transformations 4=7516
 ZrH_{1.75}, neutron thermalization, temp. dependence 4=21878

operation

- (subheading introduced in 1964)
 AGR research measurements 4=6436
 AGR Windscale, control and instrumentation 4=6434
 boiling water heat transfer, tube burnout, world data 4=29789
 changes of reactivity in Pu-U fuel elements, meas. 4=30364
 computer programme, GREENSHANK I, liquid mod. UO₂ 4=6422
 computer programme, REDSHANK I, liquid mod. UO₂ 4=6422
 control rod interaction in subcritical assembly 4=30362
 control rods, boron carbide, "ANNA" reactor 4=19918
 coolant, steam-water critical flow, pressure gradients 4=2632
 corona counter of neutrons, use in meas. 4=24942
 critical assembly laboratory, instrumentation 4=15258
 cross-power spectral meas., two-core reactor 4=19868
 cylindrical reactor, control rod efficiency 4=1164
 direct-contact core, delayed-neutron economy 4=19913
 electricity, direct conversion, by electrode insertion into ionized vapour 4=18660
 electromagnetic transport system, installation 4=28096
 EWA, void coeff. meas. 4=1154
 experimental advanced gas-cooled reactor 4=6432

Nuclear reactors, fission—contd
operation—contd

- fluctuations in power excursion 4=12324
 fuel cycle, reactivity and discharged fuel irradiation calc. 4=6438
 fuel element temp. distribution, calc. 4=19917
 fuel rod burn-out detector, boiling heat transfer expt. 4=25467
 graphite exponential assembly, Bucharest, standard meas. 4=1158
 heat transfer by free convection, up to near-critical conditions 4=5413
 HIFAR, neutron energy spectrum 4=6427
 instability and reactivity losses L54M reactor 4=19911
 lattice resonance escape probability, meas. 4=1165
 leakage-neutron energy spectra 4=19916
 measurement, strong absorpt. in sub-critical reactor, by random pulsed source and intercorrel. 4=6445
 molten salt, 10 MW, descript. 4=12313
 multiregion reactors, control rod efficiency 4=1141
 neutron detectors, comparison of reaction rates 4=6448
 neutron diffractometer 4=17805
 neutron field distrib. curve, automatic recording device 4=25468
 neutron flux amplification, by reflector trap 4=1148
 neutron flux, fast, energy distrib. meas. 4=19909
 neutron flux at fuel-element position 4=19908
 neutron flux meas., correction factors, with Cd-covered Co wires 4=3760
 neutron flux monitors 4=19914
 neutron spectra calcs. rel. to radiation damage 4=17231
 neutron spectrum, fast, and traversing graphite, Pb and Fe 1-10 MeV 4=12312
 neutron spectrum, transmission function of choppers 4=9218
 neutron transport theory problems 4=906
 noise analysis, neutron flux and core flow, GE VBRW 4=19881
 noise analysis, symposium (Nov. 1963) 4=19855
 noise analysis technique, University of Florida programme 4=19873
 noise measurement, Dounreay fast reactor 4=19882
 noise measurements, Saxton reactor 4=19880
 organic cooled, optimization of amount of retained degradation products 4=3750
 period meter, digital 4=22269
 period meter, magnetic core 4=15259
 photoneutrons as start-up source in TRIGA 4=6430
 power recorder with moveable ionization chamber 4=1161
 power spectral density meas., subcritical reactor 4=22271
 pressurized-water, noise analysis for instability 4=19879
 radiation heating, in reactor and shield, calc. 4=9592
 reactivity change meas., precision limitations 4=17232
 reactivity, direct meas. methods 4=9617
 reactivity, negative, meas. using neutron fluctuation anal. 4=19865
 reactivity, negative, measurement 4=19867
 reactivity and power meas. using neutron detection-probabilities 4=19859
 research utilization, Avogadro RS1 4=19854
 safety parameters, fission product release 4=9608
 shutdown reactivity meas. using noise techniques 4=19864
 space-power systems, Rankine-cycle fluids, thermal data 4=5462
 stable neutron period, in presence of neutron source 4=3754
 start up, rapid, by fission rate obs. 4=15256
 subcritical assemblies, interaction, exper. data 4=12300
 subcriticality determ., pulsed neutron source meas. 4=1126
 thermal neutron He³-Ne-CH₄ proportional counter 4=21881
 thermal, Tc accumulation 4=1163
 transfer function meas. by noise analysis 4=19871
 transient boiling, temp. overshoot and delay time, exptl. study 4=3756
 transient minimisation during loading 4=22266
 UTR-10, coupled regions, kinetic behaviour 4=3752
 VVR-M, spectra, neutron and γ , in beamhole 4=1149
 VVR-S, effects of reflectors 3=1160
 VVR-S, neutron spectrum modification in thermal columns 4=12319

Nuclear reactors, fission—contd**operation—contd**

- VVR-S "EVA" with graphical reflector, critical expt. 4=6437
 VVR-S, fuel exposure, rel. to neutron spectra 4=1151
 VVR-S, prompt n lifetime 4=3749
 VVR-S, soft γ -spectrum 4=1150
 WWR-M, critical experiments 4=1156
 Wigner energy measurement 4=19912
 ZR-1 critical assembly, investigations 3=1157
 Be BR02, delayed photoneutrons 4=3753
 Ni-activation neutron dosimetry 4=19915
 U—Mo alloy reactor, unmoderated, unreflected, super-prompt-critical behaviour 4=1128

theory

(subheading introduced in 1964)

- absorber representation in finite difference codes 4=9607
 adiabatic point, dynamics, temp. effect on reactivity 4=25460
 age diffusion equation, analytical calc. 4=22252
 analysis, symmetry props. of eigenfunctions 4=3738
 axial flux shape, under continuous fuel cycle at equilibrium 4=9597
 boiling-water, nucleation kinetics 4=3727
 boiling water reactor, neutron kinetics 4=17220
 boiling water, size limitations and economics 4=6408
 breeder, fast, problems review 4=6407
 breeder, thermal, aqueous 4=6409
 calculation, THULE scheme 4=28082
 CANDU type, conversion ratios and fission factors 4=3734
 chain reactions, statistical theory 4=1144-6
 channel flow, boundary conditions 4=17219
 collision density, asymptotic form 4=6419
 concentric-ring resonance integral and collision probability, by Dancoff coeff. 4=3729
 continuous spectra, analysis using matrix method 4=3741
 control, correlation function applications 4=19870
 cooling, natural liquid circulation, non-stat. regimes 4=25456
 core thermal performance, design variable uncertainties 4=3737
 correlation function and power spectral density 4=17224
 correlation, two n detectors, just critical reactor 4=3745
 critical calc., D_2O , using eigen cross-sections 4=9595
 critical parameters, spherical harmonic appl. to many-group approx. 4=22260
 critical problem, one-dimensional, transport soln. 4=3735
 critical region, with nonlinear temp.—neutron flux coupling 4=15249
 critical state, for non-linear flux/temp. rel., many-group approx. 4=22259
 critical state with non-linear temp.-n flux relation 4=19898
 criticality, slab, calculation 4=19857
 cross-correlation method for dynamic response meas. 4=19866
 cylindrical cell approx. in lattice calc., validity 4=22264
 cylindrical, reflected, neutron flux boundary conditions 4=1133
 cylindrical slug lattice, n diffusion lengths calc. 4=6411
 cylindrical, surrounded by reflector, calc. with special metrics orthog. system 4=1155
 diffusion coeff. energy averaging 4=25461
 diffusion coeffs., cell averaged, calculation 4=22258
 dynamics, with loss rate proportional to energy 4=3731
 effective delayed neutron fraction, meas. methods 4=22270
 equipoise method, convergence 4=3730
 excess reactivity predicting, ETR 4=19890
 fast, extrapolation length formula, in multigroup P_1 -approx. 4=9598
 fast, few-group diffusion calcs. 4=12303
 fast fission factor, water moderation, calc. 4=3743
 fast reactor, behaviour after reactivity step, rel. to prompt negative temp. coeff. 4=12315
 fast reactor, Doppler coeff., delayed supercrit. excursion, meas. theory 4=12309
 fast reactors, gas-cooled, parametric studies 4=12310
 fast reactors, prompt supercritical power excursions 4=12306
 flat field of energy release, prod. of 4=6417
 flux calc., eccentric point source in spherical reactor 4=22261

Nuclear reactors, fission—contd**theory—contd**

- flux distrib., Boltzmann eqn. ang. expansion 4=2602
 flux, resonance absorption and disadvantage factor 4=3733
 Fokker—Flanck and Langevin equations 4=9605
 fuel elements, seven-pin cluster, fission distrib. 4=12305
 fuel-importance function and criticality 4=19887
 fuel, optimum distrib. 4=9599
 Galanin small-source theory, modification 4=6424
 heterogeneous, flux distortions, Feinberg—Galanin theory 4=6415
 heterogeneous resonance capture, variational principle 4=22256
 heterogeneous structures, neutron resonance absorption, approximation 4=28081
 heterogeneous, thermal neutron spectra calc. 4=9600
 high-flux, reactivity losses due to neutron absorpt. in fission products 4=28083
 inverse problem, position—velocity distrib. function 4=15248
 kinetics equations, Volterra integrals 4=1134
 kinetics, neutron "importance" transport 4=3721
 lattices, cylindrical, collision probabilities 4=22263
 migration areas, heterogeneous reactors, calculation 4=22257
 Milne problem extrapolation distance, chemical binding effects 4=22254
 model, iterative analogue, for core dynamic study 4=25458
 moderating media, neutron wave propagation rel. to $1/v$ poisoning 4=3426
 moderation, core, various shapes, calc. 4=17217
 multi-group neutron kinetic eqns., Monte-Carlo calc. 4=17215
 multigroup transport programme for thermal spectrum 4=6423
 multiregion two-dim. theory, analytic method 4=1124
 neutron density calc., perturbed-kernel method 4=9601
 neutron diffusion calc., allowing for delayed n 4=6413
 neutron diffusion constant, anisotropy due to empty channels 4=19892
 neutron diffusion from flat source in $Pb-H_2O$ plate and rod lattices 4=15066
 neutron diffusion in moderators, near absorbing rods 4=9603
 neutron energy and lethargy distrib. in infinite "pure" medium, eqn. soln. by adjoint moments 4=12317
 neutron escape probabilities, approximation 4=1130
 neutron Fermi age in D_2O and H_2 4=21874
 neutron flux energy-space distrib., multigroup calc., perturbation method 4=12297
 neutron flux, thermal, energy distrib. in Be 4=12019
 neutron fraction, effective delayed, in fast reactor, calc. method 4=28084
 neutron kinetics eqn., computer soln., BWR application 4=17220
 neutron moderating and absorpt., core of concentric cylinders 4=19856
 neutron multiplication expts. involving one fuel element, flux calcs. 4=6414
 neutron multiplication in Be^9 , using U^{235} converter 4=9594
 neutron multiplication, flux fluctuations 4=3728
 neutron multiplication, with single fuel element 4=9596
 neutron multiplication with a single fuel element 4=12311
 neutron pulse in infinite slab, variational solution 4=21864
 neutron-pulse parameters in H_2O , temp. var. 4=17221
 neutron resonance cross-sections, Doppler-broadened, calc. 4=12018
 neutron resonance integrals, capture and fission cross-sections, Fortran program 4=25463
 neutron rethermalization in graphite and water 4=3739
 neutron scatt. in solids and thermalization 4=25455
 neutron spectra, calc. 4=1143
 neutron spectra, time dependent, in graphite 4=12016
 neutron spectrum calc. in composite fuel element, rapid, approx. 4=9612
 neutron spectrum, thermal, in moderator near temp. discontinuity 4=19896
 neutron thermalization in graphite 4=19897
 neutron thermalization, heterogeneity effect on spectrum carr. 4=12299
 neutron thermalization, transient phenomena 4=19893-4

**Nuclear reactors, fission—contd
theory—contd**

- neutron transport eqn. soln., STRETCH computer programme 4=6074
- neutron transport eqns., existence and uniqueness 4=3420
- neutron transport eqn., improved computer nucl. 4=6075

 Bi, by protons, secondary reactions (α , 2n) to (α , 6n) 0=20437
 Bi, by protons, 3-10 BeV, At isotope yield 4=6341
 Bi, by 380 MeV protons, cross-sections 0=435
 Bi^{209} , by BeV protons, momentum imparted to nucleus 0=17593
 Bi^{209} , by p, 135 MeV, $\text{Po}^{200-208}$ 3=10348
 Bi^{209} , by 660 MeV protons, yield 0=11408
 Br, by high-energy protons and heavy nuclei 4=12228
 Br, by 7.5 MeV π^- -mesons, emulsion meas. 4=9548
 Br, by 2-9 GeV protons, upper limit 4=9502
 C, 200 MeV, Be^{10} production cross-section 4=15216
 C^{12} , by protons at 28 GeV 2=18326
 Co product in Ni, by 3BeV protons 3=8101
 Cr^{51} , product in Fe by 3BeV protons 3=8101
 Cu, by protons, 660 MeV, Si^{31} and P^{32} yields 2=20689
 Cu, by protons, 660 MeV, Si^{31} and P^{32} yields 3=8150
 Cu, by protons, 3-30 GeV 3=4641
 Cu, by 24 GeV protons 2=14097
 Cu, by 385 MeV neutrons, meas. 4=3671
 F^{18} , prod. by photo-spallation 0=7695
 Fe and light nuclei, by fast protons 4=15216
 Fe, by 150 MeV protons 3=24940
 Fe, 730 MeV, production cross-sections for long lived radio nuclides 4=15216
 Fe target by protons, 3BeV, products 3=8101
 Fe wall, induced by 10 GeV proton beam or secondary mesons 2=22817
 Fe^{56} product in Fe by 3BeV protons 3=8101
 Hf, by 660 MeV protons 0=4095
 Ir, by protons, at 9-87 MeV 4=3659
 Li fragments, proton induced spallation 4=17129
 $\text{Li}^{6,7}$ fragments, p bombarded targets 4=17130
 Mn^{55} product in Fe by 3BeV protons 3=8101
 Mo^{96} , by 1.8 GeV protons, isobaric yield distrib. 4=9515
 N, 200 MeV, Be^{10} , production cross section 4=15216
 O, 200 MeV, Be^{10} production cross-section 4=15216
 section 4=15216
 $\text{O}^{16}(\pi^-, n)[\text{Li}^8 + \text{Be}^7]$ 2=14123
 $\text{O}^{16}(\pi^-, n)[\text{Li}^8 + \text{Be}^7]$ 3=6279
 O^{16} , by protons, 20-150 MeV meas. 3=4642
 Pa^{117} , by 155 MeV protons 1=2215
 Pb, by protons, 3-10 BeV, At isotope yield 4=6341
 Pb, by 3 BeV protons 0=5747
 Pt, by 385 MeV neutrons, meas. 4=3671
 Ru^{96} , by 1.8 GeV protons, isobaric yield distrib. 4=9515
 Ru^{100} , by BeV protons, momentum imparted to nucleus 0=17593
 Sb, by protons, 660 MeV; Be^7 , F^{18} , Na^{24} , Mg^{28} , Si^{31} , P^{32} yields 3=8150
 Sn, by protons, secondary reactions due to capture of products 0=9633
 Ta, rel. to $\text{Dy}^{152,153,155,157}$ decay 2=14050
 Ta by protons, 600 MeV 2=18302
 Ta by 660 MeV protons 1=17029
 Th, by 82 and 150 MeV protons 1=12200
 Th, by 155 MeV protons 2=10110
 $\text{Th}(p, \alpha xn)\text{Ac}$ formation cross-section calc. 4=30339
 Th^{232} , fission-spallation competition, by 155 MeV protons 1=13871
 Th^{232} , by 1-2 BeV protons 1=11016
 $\text{Th}^{232} + \text{He}^4$, spallation-fission competition at 15-46 MeV 0=1450
 Tl, by protons, secondary reactions, (α , 2n) to (α , 6n) 0=20437
 U, by 3 BeV protons 0=5747
 $\text{U}^{233} + \text{d}$, spallation-fission competition at 9-24 MeV 0=1450
 $\text{U}^{235,238}$ by 1-2 BeV protons 1=11016
 U^{238} , by BeV protons, momentum imparted to nucleus 0=17593
 Y, by protons, 60-240 MeV 0=1405
 Zr^{90} , by 1.8 GeV protons, isobaric yield distrib. 4=9515

Nuclear track emulsions

- absorption of water, swelling 0=17168
 α -active elements in sol., estimation method 2=5558
 Agfa K2, "constant sagitta" scheme 0=5461
 Agfa K2, proton range 1=16633
 Agfa K2, proton range 4=789

Nuclear track emulsions—contd

Agfa K2, range-energy relation 0=5460
 Agfa K2, sensitivity to electrons, 80-90 keV 0=7255
 α^- particle production, by p-bombardment 0=9620
 for alpha ray spectra meas. 4=25216-17
 use in analysis of 0.25-5 MeV neutron spectra 0=12793
 ang. distrib. meas., search for instrumental effects 2=5557
 angles of emission in showers, meas. 1=13261
 angular spread of beam of particles 0=3900
 antiproton interactions 0=5562
 antiprotons, nuclear interaction, mean free path 4=15207
 area scan efficiency, in normal and water loaded emulsions 0=9246
 automatic development 1=10822
 automatic development at one temperature 0=12754
 automatic examination, with television raster 4=790
 automatic meas. of multiple scatt. parameters 0=12786-7
 automatic track analysis, survey 0=12784-5
 avoiding corrosion during fixing 0=194
 background fog variation with developer pH 0=191
 use in β -autoradiography 0=15216
 use in β -spectroscopy 3=17252
 blob length det. for heavy primaries in cosmic radn. 4=30284
 Buchner spectrometer for particle selection 1=13701
 calibration for neutron spectrum meas. from RaD-Be 4=25115
 Canadian and Ilford G5, comparison 0=12798
 cascade energy determination by optical study of emulsion 1=3301
 charge determ. of nuclei by δ -electron counting 4=16779
 charge determination for relativistic particles 3=14841
 charged particles of different masses, discrim. 3=4304
 chart tracing method modification 4=14994
 comparison in π^+ -decay, Ilford G-5 and NIKFI-R 0=11198
 Conference, Strasbourg (1957) 0=2260
 use in conjunction with particle accelerators 0=12654
 use for cosmic-ray absorption meas. 0=12090
 for cosmic ray flux, scanning efficiency 4=15116
 cosmic ray, recovery 0=20251
 cosmic ray stars, statistical distrib. 0=7434
 use in cosmic-ray studies 0=12797
 cosmic ray variations, measurement 1=3341
 curved photographic emulsions 0=3902
 damp effects, α , track lengths 3=19535
 density of single grains, calc. along track 2=7804
 density vs exposure curves, for 20-200 kV electrons 1=13252
 density versus exposure curves, for 20-200 kV electrons 1=13252
 depth gauge for tracks 3=2181
 detection of events 1=13260
 developer ageing time effect on emulsion background 1=16632
 developing device 0=12748
 development, apparatus 0=19986
 development defects and track structures, using amidol developers 1=13249

two-body problem, exactly soluble, with non-central forces 3=24664
two-nucleon, review 3=14973
two-nucleon system, chain approximations 1=3168
two-nucleon system, K^- capture, Y^* prod. 3=10170
two-nucleon system, Serber—Pais charged-scalar strong-coupling theory 1=7236
with unstable particles 4=6136
virtual particles, interaction cross-sects. 3=2256
 e^-N , strange-particle prod., dispersion theory 4=9285
 $\gamma + N \rightarrow \pi + N$, at high energies, helicity formalism 4=19547
 $\gamma-N$, pion prod., $\pi-\pi$ interact. effects 3=15016
 $\gamma + N \rightarrow Y + K$, resonance model 3=24797
 K and \bar{K} -mesons, ρ and ω exchange 3=4458
 \bar{K} -mesons, S-wave, with vector mesons 3=10172
 $\bar{K}-N$, S-wave, as two-channel problem 3=15029
 K^-N rel. to Y_0^* , 1765 MeV 4=12072
 K^- -pairs 4=21933
 $\bar{K}N$ bound states, rel. to K^-p scatt. 2=5739
 $K-N$, high-energy, resonance prod. rel. to decay 4=24997
 $K + N \rightarrow K + \pi + N$, isobar model analysis 4=19499
 $\bar{K}-N$, resonant states 2=20419
 $\bar{K}-N$, search for Y^* resonances 4=21944
 $\bar{K} + N \rightarrow \pi + Y$, fixed-angle dispersion relns. near and below threshold 4=19588
 $\bar{K}-N$, $I = 1$, $p_{3/2}$ channel, calc. 4=21935
 Λ -hyperons, 1S_0 - 3S_1 comparison 2=13974
 $\Lambda-N$, average, for bound hypertriton 4=9316
 $\Lambda + N$ and baryon cascade disintegration 4=24995
 $\Lambda-N$, low-energy, central potentials and wells 4=9292
 $\Lambda-N$ potentials, two-pion-exchange, baryon excited states effect 4=9293
 $\Lambda-N$, rel. to Λ binding energy in nuclei 4=9366
 $\Lambda-N$, three-body, two-body exchange contrib. 4=6139
 N coupling const., from pp-scattering data 2=22582
 (N, e) and (N, \bar{e}) transitions, symmetry behaviour 2=7830
 $N + \gamma \rightarrow N + \pi + \pi$ and $N + \pi \rightarrow N + \pi + \pi$, near threshold, theory 3=6032
 N -hyperon bound systems 3=17340
 $2N-K^-$ mechanism 3=24788
 $N + K^- \rightarrow \Lambda + 3\pi$ in D at 765 MeV/c and η isospin = 0 and not 1 4=25165
 $N-\Lambda$, charge-symm. violation 4=19644
 $N-\Lambda$ potentials in Λ -hypernuclei 2=1783
 NAK , coupling constant 2=9929
 $N-\bar{N}$, annihilation potential, range 1=16775
 $N-\bar{N}$ annihilation, with prod. of two pions 1=5720
 $N-\bar{N}$ bound state in ladder-chain approx. 3=7813
 NN collisions, $\Lambda\Lambda$ pair prod. 2=9924
 $N-N$ in cosmic ray jets, model 3=4542
 $NN \rightarrow KK$ or YY , calc. 2=22499
 $N-N$ 4=21748
 $N-N$ collisions, transverse momentum, 27 GeV 2=20328
 $N-N$ collisions, Treman-Yang criteria 2=22509
 $N-N$, in cosmic-rays, multiple particle prod., hydro-dynamic and fireball models 1=2118
 $N-N$, coupled to meson field, ground state energy 4=846
 $N-N$ field, semi-phenomenological Hamiltonian 2=9837
 $N-N$ forces, ground state props. of nuclei 3=2357
 $N-N$, in heavy nuclei, effect of many-body forces 4=9339
 $N-N$, high-energy jets, two-centre model and nonlocal theory 2=22410
 $N-N$, high energy, pion cloud role 2=305, 13825
 $N-N$ jets, multiplicity, ang. distrib. 2=18155
 $N-N$, rel. to low-energy nuclear potentials 3=2348
 $N-N$, low-energy, rel. to nucleon core 3=4383
 $N-N$, very low momentum transfers 2=20574
 NN mechanism in $\pi-\pi$ resonances, Chew—Mandelstam eqns. 1=10908
 $N-N$ meson multiplicity at 2800 GeV meas. 4=11983
 $N-N$, momentum spectra of recoil protons, pole approx. 4=25078
 $N-N$, multiple meson prod., two-centre model 4=9238
 $N-N$ and N -nucleus, cosmic rays in emulsions 3=24817
 $N-N$, in nuclear matter, potential, forces, calc. 4=27941
 $N-N$, from nuclear—electron scatt., Fermi fluid model 4=6037

Nucleons and antinucleons—contd
interactions—contd

- $N-N$, 1-10³ GeV, intensities of produced particles 3=4366
 $N-N$, 100 GeV 3=10105
 $N-N$, >100 GeV, study of showers 2=13786
 $N\bar{N} \rightarrow \pi\pi$ amplitude, rel. to nucleon electromag. structure 1=3176
 $N-N$ potentials, rel. to meson resonances 4=25076
 $N-N$ potential, using nucleon core + single pion model 2=11937
 $N-N$, and ζ -meson quantum numbers 2=20327
 $N-N$, single- π prodn. 4=6092
 $N-N$, spin-orbit, rel. to vector mesons 4=25077
 $N-N$, to 10 GeV, inaccuracy of Castagnoli formula and Duller-Walker diagram 2=22574
 $N-N$, 200 GeV, multiple meson prod. 3=24711
 $N-N$, ultrahigh-energy, Monte-Carlo method analysis 4=11985
 $N-N$, $\sim 10^{18}$ eV, effective target-mass distrib. 4=11984
 $N-N$ and $N-\bar{N}$ total cross-sections, systematic analysis 4=19502
 $\bar{N}-N$ and $N-N$, \bar{N} production cross-section 4=30222
 $N-N$, $N-\bar{N}$, π prod., isobaric nucleon model 1=10904
 $\bar{N}-N$, peripheral, effect of annihilation at ~ 2 BeV 4=6038
 $\bar{N}-N$ potential, suppression of 3π annihilation 4=6036
 $N-N$ potential, two-pion exchange, calc. 3=12450
 $N-N$, renormalized coupling const. 3=2254
 $N-N$, s-wave, charge symmetry 3=12519
 $N-N$, in shell-model analysis 3=2373
 $\bar{N}-N$ system, chirality invariance 3=7897
 $N-N$, velocity depend., in nucleus 3=17382
 $N-p$, at 9 BeV, in nuclear emulsions, rel. to multiplicity 3=6002
 $N-p$, 26.7 GeV/c, effective target mass 3=19627
 $N-\pi$ cross-sections, rel. to virtuality, analytic props. 1=19250
 $N + \gamma \rightarrow N + \pi + \pi$ and $N + \pi \rightarrow N + \pi + \pi$, near threshold theory 2=7888
 $N + N \Rightarrow m\pi^0$, in supernovae 2=15375, 19331
 $N + N \rightarrow \Lambda + N + K$, $\Lambda-N$ pairs in $\Lambda + N \rightarrow \Sigma + N$ 1=2025
 $N + N \rightarrow N + N + \pi$, overlapping resonances 4=16803
 $N + N \rightarrow \pi + N + N$, "bipion" diag. contrib. 3=5994
 $N + N \rightarrow \pi + N + N$, "bipion" diagram contribution 2=16188
 $N + \bar{N} \rightarrow \pi + \omega$, ang. correl. 4=6039
 $\bar{N} + N \rightarrow \pi + \omega$, ang. correl. 4=6039
 $\bar{N}_s + N_b \rightarrow \bar{Y}_c + Y_d$, spin correl., rel. to invariances 4=25085
 $N-p$, at 9 BeV, in nuclear emulsions, rel. to multiplicity 2=7856
 $N-p$, inelastic, at 9 BeV 2=1684
 $N-\pi$ coupling constant, upper limit 4=21895
 $N-\pi$, high energy, rel. to "target mass" in one-meson-exchange 3=12539
 $N-\pi$, hyperon ang. distrib., rel. to parity 3=4462
 $N-\pi$, inelastic, at high energy 2=7884
 $N-\pi$, inelastic, at high energy 3=6040
 $N-\pi$, rel. to jets, 10^{14} - 10^{18} eV and $N-N$ interact. 3=17364
 $N-\pi$, neutral scalar theory with recoil 4=848
 $N-\pi$ resonances, review 3=4430
 $N-\pi$, strange-particle prod. 3=19700
 $N-\pi$, at 7.3 GeV in emulsion 2=11981
 $N-\pi$, 7 GeV two prong interaction, observation 4=27880
 ν , meson production 4=3434
 $\nu-N$, high-energy, conserved vector current and partially conserved axial-vector current hypotheses 4=28015
 $\nu + N \rightarrow \mu^+ + N^*$, 4=30267
 ν , weak, meson production 4=19420
 $p-N$, free and quasifree, 14 GeV, in emulsions 4=19506
 $p-N$, secondary particle prod., angular distrib. 4=25089
 $p-N$, 9 GeV, four momentum transfer and isobar mass 4=25090
 $p-p$ and $n-n$ final state interactions, comparison 4=19508
 π electro- and photoproduction, theory 2=3377
 π -meson, high energy, Λ -particle prod. model 2=9925
 π -meson-nucleon, isobar model 2=3384
 π -mesons, multiple pion prod., isobaric model 2=18152
 π -mesons, one pion exchange, photon production 2=9898
 π -mesons, 1100 MeV, simple π^0 prod. 2=9892
 $\pi-N$, above first max., by strong coupling method 2=11984

 even—even, two-particle states, ang. momenta coupling 2=12112

Nucleus—contd

models—contd

- even—even, $228 \leq A \leq 254$, octupole collective states, on superconducting model 4=1030
- even—even, vibration spectrum, anharmonicity 4=12108
- excitation by slow charged particles 3=22288
- excited levels $0^+ 2=375$
- extended schematic model, for interpretation of vibrational states 4=9369
- $f^{7/2}$ particle, weakly coupled vibrations 4=15128
- Fermi fluid, N-N interact. from electron scatt. data 4=6037
- Fermi fluid, rel. to nucleon scatt. optical pot. 2=20605
- Fermi fluid, rel. to nucleon scatt. optical pot. 3=8083
- Fermi fluid, rel. to π -scatt. in emulsions at 6.5 GeV 2=18345
- Fermi fluid of 2 types of particles 3=15080
- Fermi gas, degenerate, rel. to nucleon scatt. optical pot. 2=20605
- Fermi gas, degenerate, rel. to nucleon scatt. optical pot. 3=8083
- Fermi gas, in nuclear surface theory 2=16287
- Fermi gas, photoabsorption, nucleon interact. 2=20491
- Fermi gas, rel. to (ν , e) nuclear reactions 2=12228
- Fermi systems with equally spaced energy levels, props. 4=5099
- fermion system, odd number, ground state energy, BCS approx. 4=18099
- fermion systems, stability conditions, app. nuclear matter 3=18750
- $50 \leq A \leq 58$, effective p-n interaction 4=6202
- finite nuclei 1=8534
- finite nuclei, energy gap, slab model 4=12109
- finite nuclei, local potentials and proton densities 1=8535
- finite nuclei, statistical model 4=25246
- fractional parentage coeffs. for several shell configurations 1=19325
- fractional parentage coeffs. for several shell configurations 2=22696
- γ -transition rates 2=5856
- generalized, equilibrium form for $A < 16$ 4=12113
- giant dipole resonance, e.m. structure 4=12128
- giant dipole resonance, effect of quadrupole collective motions 4=27935
- giant dipole resonance, rel. to potential depth 4=9389
- Green functions for perturb. response study 4=25250
- gross structure studies, interpretation, comment 2=1790
- Hamiltonian, pairing-force, exact eigenstates 4=15130
- heavier nuclei, unlike pair states, collective excit. 4=19657
- heavy nuclei, large clusters, evidence from level structure 1=16955
- heavy nuclei, and light nuclei prod. in high energy reactions 4=6307
- heavy nuclei, rot. states rel. to tensor of inertia 2=1765
- heavy nuclei, statistical model, repulsive core 1=9803
- high-energy bombardment, density and transparency distributions 4=6177
- independent-pair, rel. to variational principle 4=16997
- independent particle, C^{13} 2=18285
- independent particle and M4 transistors 4=15137
- independent particle model, energy matrices 1=12145
- independent particle, one-electron wave fn. choice, calc. 4=27933
- independent particle, photoabsorption theory 2=20492
- independent particles, and α -decay, spheroidally deformed even—even nuclei 3=12617
- individual-particle with pair interactions, reduced width corrections 3=10205
- interior, optical model 3=2425
- j^a configurations, pairing and quadrupole interactions 4=6185
- j, j and $(p, 2p)$ for light nuclei, residual nucleus states 4=12217
- $K\pi = 0^-$ states, two-quasiparticle, perturbed rotational band spectra 4=27954
- Λ -N potentials from single-particle exchanges 4=25196
- level densities, effect of pairing correl., Fermi gas model 4=12127
- light nuclei up to C^{16} , harmonic oscillator fitted to Gaussian potential, model 4=21996
- light nuclei, shell theory, review 3=7963

Nucleus—contd

models—contd

- light nuclei, surface 3=19745
- liquid drop, electron inelastic scatt. 3=8081
- liquid-drop, energy surface relief 3=15239
- liquid drop, equil. shape derivation 2=20485
- liquid drop, equilibrium shapes 1=13606
- liquid drop, fission, equil. configurations 2=5780
- liquid-drop, with high angular momentum, appl. to heavy-ion-induced reactions 1=3383
- liquid drop, rotating, equil. configs. 3=10211
- liquid drop, sharp surface, equilibrium symmetrical shapes 3=2355
- liquid drop, symmetrical shapes of equilibrium 4=9342
- low-lying levels, independ. of potential shape 4=27957
- M1 transitions, l -forbidden, quadrupole vibr. effect 4=6211
- many-body forces in heavy nuclei, from π -N interaction 4=9339
- many-body problem, boundary condition model 1=19330
- many-body perturbation methods in soluble model 1=586
- many-body problem, effective interaction 1=12070
- many-body problem in one dimension, exact solution 1=8540
- many-fermion system, graphical resummation 4=12101
- many-nucleon system in shell-model potential 4=21977
- many-particle systems, simple soluble models 2=1764
- and mass deviation from Bethe-Weisszacker relation 3=10202
- mass-eight, single excit., classified by SU3 coupling scheme 4=6183
- mass 18, shell model level calc. 2=1817
- mass-12, excited states, shell model in LS coupling 4=19652
- matrix elements for β -transitions 2=3521
- matrix elements for β -transitions 3=2399
- momentum distrib., rel. to independent particle theories 1=19328
- multishell configuration wave-function and transformation permutation group matrix 1=18275
- multishell configuration, wave-function and transformation permutation group matrix 2=21827
- N-particle system, ground state, Monte Carlo calc. 1=19295
- N-N pot., velo. depend, and nuclear matter saturation 3=24830
- neutron hole states, determ., from (d, p) or (d, t) reactions 3=19762
- neutron single particle levels, determ., from (d, p) reactions 3=19762
- Nilsson, β^- and M3- transition probab. calc. 2=7949
- Nilsson model, d-shell nuclei 1=12144
- Nilsson model, rel. to prolate deformation 1=13629
- Nilsson single-particle model, γ -transition probab. 2=18297
- Nilsson single particle, for odd mass nuclei, 1d-2s shell 3=6126
- non-axial nuclei with rotational spectrum 1=4825
- non-axial rotator model, possible exptl. tests 1=9798
- non-axial rotator, possible test of model 1=19355
- non-axially symmetric deformed potential and neutron scatt. s-wave function 4=19632
- nuclear data 2=3457
- nuclear matter, energy gap BCS theory 4=12104
- nuclear matter, energy gap, rel. to density and effective mass 4=6190
- nuclear matter, energy gap, extended theory 4=12103
- nuclear matter, fourth-order diagrams 4=12107
- nuclear matter, $N \neq Z$, collective excitations 4=15125
- nuclear matter, new research 3=24832
- nuclear matter, optical potential, approx. theories 4=12099
- nuclear-matter, pairing correlation 1=13609
- nuclear matter, superfluid, collective excitations 2=13964
- nuclear matter, symm. energy and single-particle potential 4=19633
- nuclear matter, theories of Mohling and Puff, reviews 2=1770
- nuclear matter, uncoupled approx. 4=25255
- nuclear optical potential, symmetry term 3=10217
- nuclear pairing Hamiltonian, eigenvalues 4=982
- nuclear reactions, intermediate energy, resonance model 2=5880
- nuclear reactions, many-body theory 2=5877
- nuclear surface 2=3455

Nucleus—contd
models—contd

nuclear "surface" concept 3=4550
 nuclear surface, optical model analyses 2=1769
 nuclei of $A = 5, 6, 7, 8$, cluster model 2=1763
 nuclei containing a nucleon in excess of a closed shell,
 surface interaction 1=19338
 nuclei containing nucleon in excess of closed shell,
 surface interaction 2=22703
 nuclei with neutrons and protons in $1f_{7/2}$ shell 2=346
 nucleon binding states in anisotropic field 4=9356
 nucleon cluster, rel. to (γ, pt) reaction 4=15124
 nucleon clusters, geometrical positions 4=9344
 nucleon gas, inelastic electron scatt. 3=8080
 nucleon gas, superconducting, rel. to nucleon scatt. optical
 pot. 2=20605
 nucleon gas, superconducting, rel. to nucleon scatt.
 optical pot. 3=8083
 nucleon indistinguishability, effect of 2=9984
 nucleon-nucleon potential for same shell of each
 pair 4=21981
 and nucleon scatt. theory at low energies 4=25383
 nucleons moving in shell model potential, pairing and
 quadrupole-quadrupole interactions 2=1766
 nucleus-nucleus scatt., nucleon transfer 4=12281
 oblate deformed around Ba 4=15127
 octupole deform. in even-even medium-mass
 nuclei 3=24859
 odd-A, nonaxial rotational wave functions 4=995
 odd-group model for heavy nucleus, matrix elements of n - p
 interaction 2=16286
 odd-mass nuclei with a $j = \frac{3}{2}$ particle coupled to a vibr.
 core 4=6184
 odd-odd deformed, 0^+ ($T=1$) state, residual
 interaction 4=17038
 one-particle model, giant resonance theory 2=22788
 optical, for α -particle scatt. 3=17497
 optical, analysis of C^{12} proton scatt. 2=3564
 optical, analysis of fast-neutron scattering 2=13806
 optical, analysis of neutron scatt. by deformed
 nuclei 2=3587
 optical, rel. to average reaction reson. parameters 3=6213
 optical, rel. to Ca^{40} (d, p) Ca^{41} , calc. 2=12217
 optical, calc. of excit. of collective states by inelastic
 scatt. 4=6303
 optical, calc. of (n, p) and (n, α) cross-sections 4=19793
 optical, rel. to closely-coupled-states scatt. 2=11286
 optical, for complex nuclei, rel. to neutron scatt. 2=14101
 optical, complex-potential, rel. to cpd.-elastic
 scatt. 4=9497
 optical, contrib. of interior to direct interactions 4=6187
 optical, and d scatt., ang. distrib. 4=3686
 optical, rel. to direct interaction theory for inelastic
 scatt. 3=2423
 optical, direct photoeffect 2=7965
 optical, direct photoeffect 3=6136
 optical, effect of form-factor distortion 3=22261
 optical, for elast. and inelast. proton scatt. 3=12662
 optical, rel. to elastic neutron scatt. 2=14102
 optical, in elastic neutron scatt. by Mg 2=10112
 optical, rel. to elastic proton scatt. 2=20610
 optical, in elastic scatt. of 15 MeV deuterons 4=17182
 optical, elastic scatt., potential independ. 4=25431
 optical, giant resonance, theory 2=3544
 optical, (He^3, t) reaction anal. 4=17198
 optical, low-energy neutron scatt. 2=3579
 optical-model analysis of 14 MeV neutron scatt. 4=1085
 optical model analysis, N-nucleus scatt. 3=621
 optical model, appl. to elastic scatt. of polarized
 protons at 10 MeV 1=3440
 optical model and bound states 4=6180
 optical model, calc. of proton cross-sections for
 $Cu^{63,65}$ 1=3447
 optical model, cluster expansion of potential 1=5815
 optical model of deuteron scatt., potential
 parameters 4=6366
 optical model, rel. to deuteron stripping 1=5885
 optical model, foundations 1=17066
 optical model, Green's functions 1=15734
 optical model of He^3 elastic scattering, various nuclei,
 at 29 MeV 1=19524
 optical model, at high energies 1=5814

Nucleus—contd
models—contd

optical model, imaginary part of potential for
 nuclear matter 1=5813
 optical model in the interior of the nucleus 3=2425
 optical model of light nuclei, polarization of nucleons in
 high-energy elastic scatt., calc. 1=4861
 optical model, N^{14} scatt. on C and Be at medium
 energy 1=8780
 optical model $90 < A < 130$, neutron force
 function 1=19485
 optical model of neutron scatt. at 2.09 MeV 1=19479
 optical model of nucleon-nucleus scattering 1=17089
 optical model, neutron scatt., elastic and
 inelastic 1=8733
 optical model, nucleon elastic and inelastic scatt. 1=8703
 optical model, one-particle motions 1=3430
 optical model (p, n) cross-sections 3=669
 optical model, parameters and their
 interpretation 1=8543
 optical model with polynomial potential 3=2354
 optical model potential, imaginary part, shape 1=19448
 optical model potl., effect of pairing correl. 3=6122
 optical model, proton cross-sections at
 9.85 MeV 1=8712
 optical model, review, rel. to direct interactions 1=8542
 optical model, shell effects in opt. potential 1=8544
 optical model, surface absorpt. and S-wave neutron
 strength function 3=2349
 optical model, test by double-excitation 3=661
 optical model wave-functions for strongly absorbing
 nuclei 1=19422
 optical, for neutron interact. with spherical
 nuclei 3=24947
 optical, neutron scatt., rel. to obs. values 1=19483
 optical, rel. to neutron scattering 1=13807
 optical, $90 < A < 130$, neutron force function 2=22825
 optical nuclear model 1=16959
 optical, nuclear reactions due to protons, theory
 and expt. 1=19474
 optical, nucleon scatt., calc. from phase shifts 2=10093
 optical, nucleon scatt., rel. to one-pion exchange 2=5896
 optical, rel. to O^{16} - O^{16} scatt. 2=5973
 optical, use for 1.5-14 MeV for neutron scatt. on Li^6 and
 Li^7 3=2469
 optical, parameters for deuteron interactions at inter-
 mediate energy 2=20662
 optical, parameters meas. by deuteron scatt. 4=1100
 optical, phenomenological model, solution 1=4822
 optical, rel. to π^+ absorption and diffraction 2=10125
 optical, for π -nucleus scattering 1=13831
 optical, polarization of neutron scatt. near 1 MeV 3=4644
 optical, for polarized protons scatt. 2=16400
 optical, with polynomial potential 2=3458, 13945
 optical potential for $A \sim 60$ and ~ 100 , imaginary
 part 2=9981
 optical potential for $A \sim 100$, $(n, n'\gamma)$ cross-sect.
 analysis 2=10117
 optical, potential depth, real, symm. depend. 4=9494
 optical potential effects on nucleon momentum distrib.,
 pickup reactions 3=624
 optical potential expression, reactions with heavy
 nuclei 4=3624
 optical potential, imaginary part, shape, rel. to
 reaction cross-sections 1=19447
 optical potential, isotopic spin dependence, calc., $> \sim$ MeV,
 and (p, n) reactions 3=19749
 optical potential, isotopic spin var. in nuclear matter,
 approx. 4=12112
 optical potential, multiple scatt. corrections 2=20483
 optical potential, non-locality 3=12544
 optical potential for a nucleon in infinite nuclear
 matter 1=2156
 optical potential, P-wave neutron strength function
 Tn^{ω}/D 2=22697
 optical potential for π -nucleus scatt. 2=1905
 optical potential, and reaction cross-sections 2=9980
 optical potential, scatt. nucleon waves distortion 2=16415
 optical potential, second order, nucleon scatt. 2=18227
 optical potential, spin-depend., for neutron scatt. 2=16414
 optical potential, spin-orbit, for nucleon scatt. 2=7974
 optical, proton scatt., expt. comparison 1=19475
 optical, rearrangement collisions 2=11287

Nucleus—contd

models—contd

- optical, rearrangement nuclear reactions theory 2=7960
 optical, relationship with interaction theory of inelastic scatt. 3=625
 optical, rel. to resonance theories 4=15126
 optical, review 3=17388
 optical, rel. to S and P wave strength functions 4=9527
 optical, rel. to scattering of 160 MeV protons 1=3444
 optical, symmetry-term surface peaking 4=9350
 optical, threshold effect in elastic scatt. 3=6212
 optical, rel. to triton scatt. by light nuclei 4=12256
 optical, various, strength functions and neutron polariz. 3=22260
 optical, wave-functions, forward scatt. 2=20606
 origin of tensor coupling for deuterons 1=592
 oscillator, quadrupole interaction, rotating states 4=6194
 oscillator shell, potl. energy, light nuclei 3=10200
 p, hard core from p-p scatt., up to 660 MeV, phase shift 3=24723
 p-shell, dipole excit., rel. to supermultiplet and unitary quantum numbers 4=25280
 pair, appl. to five-body problem 2=9982
 pair-correl. function, from (e, 2N) reactions 4=25382
 pair-correlation model, rel. to n-p interact. 2=9846
 pair-correlation model, rel. to n-p interact. 3=6003
 pairing, constant temp. or energy differences 3=19743
 pairing correls., charge symmetrical, light nuclei 4=25253
 with pairing correls., high energy behaviour 3=12550
 pairing force between 2 nucleons, and nuclear spectroscopy approx. 4=12096
 pairing force correls. and collective motion, book 4=16991
 pairing Hamiltonian, separability approx. 4=16996
 pairing interaction, superconduct. approx. 4=16995
 pairing interactions 1=618
 pairing model, conservation of particle number 4=21983
 particle scatt., elastic, strong absorption model 4=6300
 phenomenological theory for low excitation energies 4=15121
 phenomenological, for transitions near Fermi boundary 4=6196
 photodisintegration, unified model 1=13766
 potential diffuseness, from isomer shifts 4=19650
 Puff-Martin, nuclear compressibility and symmetry energy 2=1772
 quadrupole oscillations, collective model, anharmonicity 2=18236
 quantitative evaporation theory for diffuse potential 3=24834
 quasi-particle random phase, accuracy 4=21985
 quasi-spin, collective potential energy 3=10218
 quasistatic fission, equilb. shapes 2=18364
 quasistatic fission, equilb. shapes of nuclei 3=6304
 radiation, high-energy, absorption, Monte Carlo study 4=6177
 radioactive nuclei, rel. to electric field perturbation 1=13624
 rare-earth, even, axial asymmetry 2=5778
 from reaction intermediate energy structure 4=9470
 rectang. well, nonspher., inf. deep, single-part. levels 2=13963
 rectangular well, nonspher., infinitely deep, single-particle levels 3=6138
 reduced width detm., from polarization effects in direct nuclear reactions 3=10378
 repulsive core, d 4=892
 review 4=3525
 review 4=12093
 Roche distribution, n, p energy levels and wave-functions 4=997-8
 rotational band structure, Peierls-Yoccoz theory of collective motion 3=19759
 rotational bands 4=17011
 rotational g-factors, Nilsson model for Tm¹⁶⁹ 1=2163
 rotational model applied to Li⁷ 3=12549
 rotational states in deformed nuc., semiclassical three-dim. theory 4=27956
 rotor model, asymmetric, odd-mass nuclei, rotational energies 2=20505
 sd shell, rotational motion, self-consist. field methods 4=16994
 self-consistent "classical", with Coulomb effects 3=17389
 self-consistent model, using Duerr's Hamiltonian 2=345

Nucleus—contd

Be^{11} , shell model anomaly 2=18232
 Bi^{208} , $J^\pi = 1^+$ states calc. 4=19657
 Bi^{208} , low-lying levels, j-j coupling shell model 4=22049
 Bi^{208} , μ -mesic atom, nuclear h.f.s. 3=10208
 Bi^{210} , energy levels using shell-model 3=24875
 Bi^{210} , stripping reaction data, shell-model analysis 3=24876
 Bi^{210} , tensor forces and energy levels 3=24874
 Br^{79} , neutron strength function 0=5649
 C, "molecular" states formed by two C nuclei 0=13251-3
 C, momentum distrib. of bound protons 0=7443
 C, neutron scatt., compound nucleus formation 2=22820
 C, optical model at low energies, proton polariz. test 0=11401
 C^{10} , cluster model, rel. to β -ray end point 4=3598
 C^{12} , using $C^{12}(p, p')^3\alpha$ 0=9508
 C^{12} , 4.4 MeV level as collective state, from proton scatt. 0=11409
 C^{12} , giant dipole resonance, complete spectrum 4=9389
 C^{12} , internal momentum distrib. 3=7965
 C^{12} , shell model calc. in LS coupling 4=19652
 C^{13} , dipole state 2=16318
 C^{13} levels, use for obtaining two-body interaction parameters 4=17000
 C^{13} , low-lying anomalous parity states 4=1010
 C^{13} , potential, effective-range analysis 3=24954
 C^{14} , ground-state config. using zero-range force 3=12557
 C^{14} , shell model assignments for energy levels 0=9531
 C^{14} , shell model, configuration mixing 0=2618
 Ca^{40} 3=6128
 Ca^{40} , Brueckner charge density 3=22367
 Ca^{40} , Brueckner-Gammel-Weitzner theory 1=8535
 Ca^{40} , Brueckner-Gammel-Weitzner theory 3=6130
 Ca^{40} , dipole state, calc. 1=3381
 Ca^{40} , nucleon binding energies 2=345
 Ca^{40} , optical potential, calc. 1=3380
 Ca^{40} , props., using Brueckner-Gammel-Weitzner theory 1=589
 Ca^{41} , spin-orbit energy splitting 0=4015
 Ca^{42} struct., from $Ca^{40}(t, p)Ca^{42}$ reaction 4=25426
 Ca^{42-4} , ground states, binding energies and mag. moments, theory 1=10954
 $Cd^{110, 112, 114, 116}$, double neutron separation energies 4=3535
 Cd^{114} , low-energy spectrum and γ -decay prob. 4=9405
 Ce^{140} , 4^+ state, shell model config. 4=19696
 Ce^{140} , nucleon binding energies 2=345
 Cl^{35} 3=6128
 Cl^{38} , neutron-proton interactions rel. to j-j coupling 4=9348
 Co^{59} , weak-coupling approx, photon particle interaction 2=368
 Cr^{53} , shell-model calc. 4=22028
 Cs^{131} , collective effects 4=9407
 Cu, optical model at low energies, proton polariz. test 0=11401
 Cu^{63} 3=6128
 Cu^{66} , model for low-lying levels 3=19780
 Dy isotopes, β - and γ -vibrational states, energies 4=25276
 Er isotopes, β - and γ -vibrational states, energies 4=25276
 Er^{168} , moment of inertia, cranking model 4=21986
 $Eu^{147, 149, 151}$, collective motion and l-forbiddenness 2=13989
 $Eu^{147, 149, 151}$, collective motion and l-forbiddenness 3=6175
 F^{15} , quadrupole enhancement 0=4021
 F^{17} , collective description 0=9502
 F^{18} , even parity levels, shell model 4=19676
 F^{18} , $0^+(T=1)$ state, residual interaction 4=17038
 F^{18} , residual pair forces 3=22257
 $F^{18, 19}$, deformed, analysis using effective interactions 4=6221
 F^{19} 3=6128
 F^{20} , ground state, Nilsson model 4=3531
 Fe^{56} , shell-model calc. 4=22028
 $Fe^{55, 58}$, shell-model states assignment 3=24833
 Fe^{57} , spin and mag. moment, p-n interaction 2=22707
 Fe^{57} , structure evidence from (d, t) reactions 1=716
 He, α -scattering 0=1422
 H^3 , mixed symmetry states and nuclear photo-effect 4=9321
 H^3 , ground-state energy and wave-function 2=7832
 He^3 , bare form-factor, wave mech. calc. 4=9314

Nucleus—contd
theory—contd

- He³, charge asymmetry, binding energy diff. with H⁴ 4=30293
 He³, e. m. form factor rel. to nucleon form factors 4=9315
 He³, effect of finite proton size on Coulomb energy 1=2105
 He³, mixed symmetry states and nuclear photo-effect 4=9321
 He³, radius, Coulomb energy 3=12519
 He⁴, binding energy 0=400
 He⁴, and He⁶ clusters 2=1752
 He⁴, Irving wave-function, binding energy 2=18240
 He⁴, optical potential, calc. 1=3380
 He⁵, bound state as 2-body problem 3=2332
 He⁶, fine structure in splitting, two-nucleon L.S. potential 0=17263
 He⁶, spin-orbit splitting, effect of tensor force 1=3385
 Hf¹⁷⁶, moment of inertia, cranking model 4=21986
 Hf¹⁷⁶, orbit flip mag. transitions 3=2392
 Hg¹⁹⁷, isomeric shift 1=13691
 Hg^{197m}, magnetic and quadrupole interactions 1=9839
 In¹¹⁶ 3=7999
 In¹¹⁶ III, isomeric shift 1=13691
 K⁴⁰, neutron-proton interactions rel. to j-j coupling 4=9348
 Kr, optical model, deuteron scatt. data 0=11419
 Li⁶, α + d configuration 4=12282
 Li⁶, charge distrib. 4=9362
 Li⁶, d- α model, no support from photo-disintegration 0=9659
 Li⁶, rel. to electron scattering 1=598
 Li⁶, Gaussian density distrib. for high-energy electron scatt. 1=17086
 Li⁶, ground state, rel. to d-He⁴ interaction 0=13072
 Li⁶, lowest six even parity states calc. 2=18225
 Li⁶, neutron-proton interactions 2=1754
 Li⁶, shell model 0=9499
 Li⁶, structure, repulsive core model 0=20309
 Li⁶, wave-functions 2=13949
 Li⁷, cluster structure 1=7312
 Li⁷, e.m. props., rel. to (1p)³ config. 3=24840
 Li⁷, (Li⁶ + neutron) configuration 1=16986
 Li⁷, rotational model 3=12549
 Li⁸, Coulomb barrier, effect on, by B⁸ fragments 1=11028
 Li⁹ struct., from Li⁷(t,p)Li⁹ reaction 4=25426
 Lu¹⁷², outer nucleon configurations 2=10016
 Lu¹⁷⁵, possible structure effects 2=3459
 Lu¹⁷⁷, collective model for high spin 4=9416
 Mg²⁴, axially asym. deformation, stability 3=24844
 Mg²⁴, collective model, γ -ray data 0=11383
 Mg²⁴, deformation, calc. 1=10951-2
 Mg²⁴, deformation, variational calc. 1=8537
 Mg²⁴, energy spectrum by shell model 3=12553
 Mg²⁴, rotational levels 3=17404
 Mg²⁴, shell, collective motion, spectra 3=10212
 Mg²⁵, even parity levels, rotational structure 4=12142
 Mg²⁵, nonaxisymm. rotational motion calc. 4=17002
 Mn⁵⁵, semiatomistic model 3=15077
 Mo isotopes, odd-A 4=27969
 Mo^{94,96,98}, double neutron separation energies 4=3535
 N¹³, intermediate-coupling shell-model calc. of levels 3=22293
 N¹³ levels, use for obtaining two-body interaction parameters 4=17000
 N^{13,14}, low-lying anomalous parity states 4=1010
 N¹⁴, approx. Hartree-Fock calc. 4=16999
 N¹⁴, ground-state config. using zero-range force 3=12557
 N¹⁴ levels, use for obtaining two-body interaction parameters 4=17000
 N¹⁴, odd-parity states, shell model calc. 3=24861
 N¹⁴, shell model assignments for energy levels 0=9531
 N¹⁴, shell model, configuration mixing 0=2618
 N¹⁴, shell model, lower levels 3=15076
 N¹⁵, shell model, in elastic neutron scatt. 4=17146
 N¹⁶, spin-orbit splitting, effect of tensor force 1=3385
 Na²³, 0⁺(T=1) state, residual interaction 4=17038
 Na²⁴, even parity levels, rotational structure 4=12142
 Na²⁴-Al²⁴, vector interaction with a conserved current, beta-decay theory 0=2637
 Nb⁹¹, pairing force, and nuclear spectroscopy approx. 4=12096

- Nb⁹³, optical model rel. to resonance theories 4=15126
 Ne¹⁹, collective description 0=9202
 Ne²⁰, deformed, analysis using effective interactions 4=6221
 Ne²⁰, energy spectrum by shell model 3=12553
 Ne^{20,22}, axially asym. deformation 3=24844
 Ne²¹, s-d particle coupled to rotational core 4=3564
 Ni, neutron arrangement in outer shells, rel. to spectral isotope shift 1=5974
 Ni⁵⁸ 3=6128
 Ni⁶⁰, energy gap, using effective Hamiltonian 3=10213
 Ni⁶², vibration spectrum, anharmonicity 4=12108
 Ni^{62,63,66}, shell-model states assignation 3=24833
 O⁺, pairing force, and nuclear spectroscopy approx. 4=12096
 O¹⁴, shell model, configuration mixing 0=2618
 O¹⁵, binding energy on shell model 0=11291
 O¹⁶ 3=6128
 O¹⁶, binding energy and radius, for different inter-nucleon potentials 0=9511-12
 O¹⁶, Brueckner-Gammel-Weitzner theory 1=8535
 O¹⁶, cluster structure 4=19817
 O¹⁶, dipole state, calc. 1=3381
 O¹⁶, dipole states, by SU3 coupling scheme 4=12136
 O¹⁶, giant dipole resonance, complete spectrum 4=9389
 O¹⁶, giant resonance, e.m. structure 4=17033
 O¹⁶ ground state, Hartree-Fock calc. 3=6139
 O¹⁶, higher random phase approx. 2=13962
 O¹⁶, low excited states in SU3 scheme 3=10253
 O¹⁶, many-body problem 1=19331
 O¹⁶, nucleon binding energies 2=345
 O¹⁶, O⁺ levels in terms of shell-model 4=15147
 O¹⁶, optical potential, calc. 1=3380
 O¹⁶, props., using Brueckner-Gammel-Weitzner theory 1=589
 O¹⁶, quadrupole and octupole vibrations 0=4019
 O¹⁶, reaction matrix calc. of binding and single particle energies 3=2357
 O¹⁶, self-consistent field calc. 1=13615
 O¹⁶, two-body correlations, perturbation theory 1=3376
 O¹⁶ to Ca⁴⁰, systematics 1=8574
 O¹⁷, deformed, analysis using effective interactions 4=6221
 O¹⁷, quadrupole enhancement 0=4021
 O¹⁷, spin-orbit energy splitting 0=4015
 O¹⁷, surface diffuseness, effects on single-particle level structure 1=3399
 O¹⁷, D-state doublet splitting, calc. 1=3386
 O¹⁷, two-nucleon interact, in common harm. oscill. potential 4=12106
 O¹⁸, deformation parameter, electron scatt. 3=10331
 O¹⁸, even parity levels, shell model 4=19676
 O¹⁸, level spectrum rel. to two-nucleon interact. 2=16324
 O¹⁸, residual pair forces 3=22257
 O¹⁸, wave-function of ground state 3=10381
 O^{18,20} ground state coupling schemes 4=15235
 Os, deformation dependence of moment of inertia 1=8553
 Os^{186,188,190}, ground-state rotation bands 4=25321
 Os¹⁸⁸, as intermediate coupling nucleus 2=18263
 P³¹ 3=6128
 P³¹, collective-vibrational model 0=20319
 P³², low-lying levels, conflict with jj-coupling theory 0=9537
 Pb²⁰⁸, Brueckner-Gammel-Weitzner theory 3=6130
 Pb²⁰⁸, nucleon binding energies 2=345
 Pb²⁰⁸, shell model, lowest odd-parity excited levels, calc. 0=17500
 Pb²⁰⁸, shell theory of 3-, 4+ levels 2=20517
 Pb²⁰⁸, two-hole two-particle configs. 3=10275
 Pm^{147,151}, deformation state and model choice 4=989
 Po²¹⁰, energy levels using shell-model 3=24875
 Po²¹² isomer, configuration 3=24889
 Pr-isotopes, pairing model 3=12555
 Ra²²⁶, equilibrium deformation 0=20320
 Rn, transitions 0=20356
 Rn²¹⁸, using self-consist. and pair potentials 4=6247
 S, neutron scatt., compound nucleus formation 2=22820
 S³² 3=6128
 S³², deformation parameter, electron scatt. 3=10331

Optical constants—contd

refractivities of 36 hydrocarbons 0=8777
 resins, synthetic, non coincidence of optical and mechanical singularities 4=26461
 rock salt, density, spectral depend. 2=18810
 semiconductors, conference 0=570
 semiconductors, IV and III-V groups, u.v. dielec. const. 3=10908
 semiconductors, in i.r. region, free-electron theory 0=6163
 semiconductors, optical and nonradiative transitions, temp. depend., calc. 3=23032
 semiconductors, single crystals, transmission meas. 3=23041
 solids, meas. from reflectivity in high absorption regions 2=681
 solids, nonlinear effects 2=4108
 solids, from optical data using dispersion relations 2=6535
 solids, vacuum u.v., rel. to electron energy loss 3=8578
 solns. and melts, comparison with theory 0=3529
 soot, extinction coefficient 1=10086
 stilbene, meas. and calc., effect of temp. 0=4263
 styrene derivatives and copolymers, photoelastic constants 0=8257
 tetrachloroethane, from i.r. reflection spectrum 1=7698
 tetragermanates of Sr, Pb and Ba, type AB_4O_9 1=15096
 thin films, in far u.v. meas., using reflectivity - thickness curve 1=12994
 thin films, review 1=14569
 thin films, review 4=28659
 ultraviolet, meas. by spectrophotometer 3=18994
 uniaxial crystals, mag. and elec. field effects 1=14567
 wave motion over reefs 0=8628
 wave recorder, long period 0=12410
 Ag 1=6201
 Ag crystals, effect of vacuum annealing, Ar-ion bombard. 3=20435
 Ag films, effects of structure 2=19111
 Ag films, resonance phenomenon 2=8476-7
 Ag, free electron and band theory 3=2986
 Ag, i.r. 2=6538
 Ag, from reflectance at 2-10 eV 1=3815
 Ag rel. to speed of formation 1=19939
 Ag thin films, rel. to heat treatment 3=13146
 Ag, calc. 0=4389
 Ag films, effect of lattice defects 0=4391
 Ag, i.r. in skin effect calc. 0=6078
 Ag liquid, i.r. meas. 0=19154
 Al, complex freqn. - depend. dielec. const. deriv. 4=7108
 Al, rel. to elec. conduction mechanism 0=6077
 Al elimination of oxide film effects 3=15646
 Al layers, 0.4-2 μ region, rel. to quantum absorption 4=20447
 Al, polished, 450-650 m μ 0=9075
 Al, 2500 Å-5 μ 0=11754
 Al, vacuum u.v., Drude-like model 3=914
 AlB_{12} , α and β phases 0=6356
 AlN, and crystal electron forbidden zone width 4=25896
 Au 1=6201
 Au, calc. 0=4389
 Au, colloidal 1=9393
 Au, colloidal, peak at 500-600 m μ 0=666
 Au films 0=18114
 Au films 3=13147
 Au films, absorption and dispersion 2=2891
 Au films, effect of exposure to air 0=1722
 Au films, near i.r. props. 2=14656
 Au films, near-u.v. 0=2248
 Au films, on quartz substrate, phase variations 0=18115
 Au films, variation with rate of formation 0=18409
 Au, i.r. 2=6538
 Au, i.r., in skin effect calc. 0=6078
 Au rel. to speed of formation 1=19939
 Au thin films, rel. to heat treatment 3=13146
 Au-Ni alloys 3=8580
 BP 4=26178
 $BaTiO_3$, anisotropy and opt. dielec. const., calc. 0=1720
 $BaTiO_3$, harmonic generation, by laser, from second order polarization tensor 4=2809
 $BaTiO_3$, low-temp. phase 0=4583
 Be hydroxyacetate, from reflectivity meas. 1=17862

Optical constants—contd

Be, in i.r. spectral region, rel. to free current carriers 2=10569
 Bi films, effect of lattice defects 0=4891
 Bi, liquid 2=5019
 Bi, low temp., i.r. 4=28672
 Bi, 3-36 μ 1=3812
 C, evap. films, opt. density, theory and expt. 2=2890
 CCl_4 , from i.r. reflection spectrum 1=7698
 CCl_4 , liquid, from i.r. reflection meas. 3=16624
 CS_2 , from i.r. reflection spectrum 1=7698
 CS_2 , liquid, from i.r. reflection meas. 3=16624
 Ca crystal, 0.6-5 eV meas. 4=20450
 $CaC_2O_4 \cdot H_2O$, refractive indices, structure 0=6169
 CaF_2 films, rel. to growth, surface mobility and gas occlusion 4=2120
 CaF_2 in i.r. 1=19944
 $Ca_2Sr(C_2H_5CO_2)_6$, optical activity 2=18795
 Cd, liquid 2=5019
 CdO , 0.3 to 0.8 μ 4=10165
 CdS, bound exciton complexes, props. 3=6651
 CdS, harmonic generation, by laser, from second order polarization tensor 4=2809
 CdS, review 1=2436
 CdSe 1=1151
 CdSe films, 0.5-2.5 μ 0=18113
 CdSe single crystals 1=14570
 CdTe 0=10028
 CdTe 1=19943
 CeB_6 , and energy spectra 3=20437
 Ce_2S_3 , γ -phase, meas. rel. to polaron-type corrections 4=13028
 Co films, i.r. meas. 3=10919
 Co films, rel. to magneto-optical effects 3=10918
 Cr films, evaporation effects, prior obs. 4=26185
 Cr films, rel. to evaporation conditions 4=7115
 Cr_2O_3 , ion pair model, Oguchi analysis 3=25503
 Cu 1=6201
 Cu, calc. 0=4389
 Cu, colloidal, peak at 500-600 m μ 0=666
 Cu, films, wavelength depend. 2=12576
 Cu, free electron and band theory 3=2986
 Cu, i.r. rel. to microcharacteristics 2=16624

 metallic, transparency increase by blooming 2=7378
 metals, anomalous absorpt. bands 4=22832
 metals, apparatus for vacuum study 0=19422
 metals, calc. of optical props. 0=8801
 metals, optical const. rel. to wavelength 3=10902
 metals, as reflecting phase compensators, opt. const. meas. 1=6958
 metals, reflection reduction 0=3635
 modes, planar guided, optical characts. 4=14381
 multi-dielectric layers, reflecting, chromatic properties 0=16869
 multilayer asymmetric reflectors, theory 2=112
 multi-layer coating, known reflectivity, calculation 3=1827
 multilayer, controlled deposition apparatus 4=23561
 multilayer dielec. antirefl. coatings, deposition and props. 4=24377
 multilayer dielec., exact design method 1=16101
 multilayer, dielec., for Fabry—Perot interferometry in u.v., visible 3=19003
 multilayer dielectric films, theory 3=14360
 multilayer, dielectric, wedge-shaped, interference effects 2=5178
 multilayer films, analogy with 4-terminal network 1=18549
 multilayer, freq. depend. design 4=21292
 multilayer, with periodic structure, Chebyshev polynomials 0=6940
 multilayer, recurrent formulae 0=19425
 multilayer, theory 1=1823
 multilayer, in vac.-u.v. refl. filters 2=22046
 multilayers, theory of ellipsometry 2=17652
 multiple systems, reflectance and transmittance 1=16096
 negative absorption coefficient, theory 2=19717

Optical films—contd

nonabsorbing, Vašiček procedure appl. 3=1825
 optical const. meas., using reflectivity - thickness curve 1=12994
 optical const., and phase-changes, meas. 4=22818
 optical props., surface irregularity effect 4=22819
 optical wedges, varying linearly in thickness, preparation 1=16095
 organic, optical constants, rel. to structure 4=4241
 oxide films on U immersed in refractive media, optical props. 4=13060
 oxide on GaAs, ellipsometric investig. of optical const. 4=22858
 pair, semireflecting, transmission-like refl. fringes 3=9609
 parliodan, transmittance in far u.v. 4=22882
 photoelastic, for plastic deformation obs. 4=23101
 plane-parallel layers, energy resonance calc. 2=15737
 plane-parallel layers, nonlinear theory 3=16787
 polarization rel. to complex refr. index and thickness 4=24379
 polymer films, optical retardation, continuous change meas. 1=19962
 production of films giving specified phase changes 1=5350
 props. in vacuum, alterable in air 2=5176
 protective, for mirrors, evaporated CeO_2 and SiO_2 3=11927
 quarter-wave stacks, transmission and degree of polarization 2=121
 reflectance, inhomogeneous film 1=4472
 reflectance and transmittance calc. using electronic calculator 0=14079
 reflecting coating effect on optical thickness of Fabry—Perot interferometer 4=21312
 reflecting layers, MgO on plastic scintillators 2=19689
 reflecting multilayers, employing mica spacing layers 0=16883
 reflection, appl. of Stokes' principle, metallic or dielectric 4=2845
 reflection coefficients, calc. using nomogram chart 2=17583
 reflection reduction of metal films 1=2875
 reflection and transmission with negative absorpt. coeff. 2=19717
 reflection and transmission of plane-parallel layer 3=9605
 refractive index gradt. perp. to surface 4=8442
 refractive index measurement, Brewster angle method 0=19380
 refractive index and thickness meas., for films on transparent substrate 4=21305
 reversibility of light beam 2=111
 reversibility principle 2=7376
 reversibility principle, Maxwell eqns. theory 2=9397
 reversibility and reciprocity princ. 2=13454
 review 4=28659
 review of props., bibliography 1=1823
 review of recent progress in Japan 4=24400
 review, theory and applics. 2=22041
 semitransparent, absolute phase change on reflection, meas. 4=16244
 spectral emittance rel. to optical props. 3=25432
 summation formulae, for metal and dielectric films 2=6551
 thickness meas. by Savart's plates, auto-collimation 3=21527
 thickness meas., from var. of reflectance and trans. on incidence and polarization 4=16245
 thickness measurement using fluorescence 1=5245
 thickness monitor 0=3481
 thin coatings, basic rels. 2=5133
 thin film appl. in optics discussion 4=22841
 total reflection, use for study of optical props. 2=11487
 transmission, integral eqn. 4=14388
 transmission phase-shifts prodn., meas. 3=14361
 transmittance, appl. of Vašiček reversibility princ. 4=11333
 transparency of insufficiently parallel layer 2=7375
 transparent, thickness and refr. index meas. 4=21004
 two-layer anti-reflection coating for low n glass 0=5154
 u.v., high reflectance 2=17641
 weakly absorbing films, phase changes by total internal reflection 3=5527
 weakly absorbing, total reflection 2=11487

Optical films—contd

Ag, abnormal absorpt. 4=22866
 Ag, Al, optical scatt. 2=13455
 Ag, for Fabry - Perot interferometer in i.r. 3=11934
 Ag, granular layers, light scatt. 4=22892
 Ag, resonance phenom., rel. to pres. 2=16800
 Ag, resonance phenomenon 2=8476-7
 Ag, thin, optical const. theory 4=22868
 Ag, very thin, absorpt., 0.2-0.7 μ 4=22867
 γ -AgI, first kind anomaly in refr. index 4=28710
 Al, abnormal absorpt. 4=22866
 Al, evap. in u.h. vac., i.r. reflectance 3=20443
 Al, oblique reflectance and transmittance 1=6204
 Al, optical const. at less than crit. wavelength 4=22844
 Al, polarization effects, special cleaning 0=178
 Al, preparation and properties 3=9603
 Al, preparation, properties, 2537-5460 Å 1=236
 Al, reflectance increasing coatings for vacuum u.v. 0=8797
 Al, reflectivity 3=23039
 Al, transmittance in far u.v. 4=22882
 Al, u.v. transmission and electron concn. 2=14657
 Al, vacuum u.v. reflectance 3=11883
 Al₂O₃, optical props., 0.2-1.6 μ , rel. to appl. 4=22893
 Au, abnormal absorpt. 4=22866
 Au, absorption and dispersion 2=2891
 Au, evaporated, optical props. determ. 4=22865
 Au, evaporated, optical props., 300-2000 Å 4=22869
 Au, for Fabry - Perot interferometer in i.r. 3=11934
 Au, i.r. absorption and reflection spectra 1=3844
 Au, near i.r., constants meas. 2=14656
 Au, optical constants and phase variations, effect of quartz substrate 0=18115
 Au, phase change, depend. on deposition speed 0=1036
 Au, preparation and properties 3=9603
 Au, resonance phenomenon 2=23513
 Au, thin, optical const. theory 4=22868
 Au, transmittance meas. of phase changes 4=22829
 Au, very thin, absorpt., 0.2-0.7 μ 4=22867
 BaO, evaporated, absorption bands 2=16818
 Bi oxide-Mg fluoride anti-refl. coating deposition 4=23567
 Bi, 2.5-10 μ thick, prep. and optical props. 0=10026
 Bi₂O₃-MgF₂ antirefl. coatings, equireflectance contours 4=21307
 Bi₂O₃-MgF₂ bilayer, antireflection theory 2=7371
 C films, optical density 2=7373
 Ca, optical props. 4=26182
 CaF, variations with press. changes 2=8882
 Cd, optical and photoelec. props. 4=22849
 Cd_{0.6}Hg_{0.4}Te, absorpt., transmission, interference fringes and refractive indices 4=13026
 CdO, absorption and dispersion theory 2=16811
 CdS, transmission from 0.5-0.75 μ 2=12586
 CeF₃-ZnS, as anti-reflection coating 4=7114
 CeO₂-CeF₃, evaporated, refractive indices 3=23035
 Co, abnormal absorpt. 4=22866
 Co, absorption rel. to wavelength 2=11488
 Cr, abrasion resistance meas. 4=23112
 Cr, absolute phase change on reflection 4=27323
 CsI and MgF₂ dielec. multilayers, prep. and props. 0=16881
 Cu, abnormal absorpt. 4=22866
 Cu, optical const. rel. to wavelength 2=12576
 Cu, very thin, absorpt. 0.2-0.7 μ 4=22867
 Fe, abnormal absorpt. 4=22866
 Fe, absorption rel. to wavelength 2=11488
 Fe, complex reproducible refr. index 2=8480
 Fe, optical const. from refl. light analysis 2=12577
 Ga, visible and near i.r. properties 4=13034
 GaAs, prep. and absorpt. edge study 4=22859
 Ge, preparation and properties 3=9603
 Ge-ZnS, i.r. props. 3=10952
 In, optical const. at less than crit. wavelength 4=22844
 In, transmittance in far u.v. 4=22882
 In₂O₃, semicond., i.r. reflectivity 2=2219
 InSb evaporated films, props. 1=10096
 K, interference fringes on reflections, opt. const. det. 0=16034
 KBr, multilayers for interferometric spectrometer 0=16844
 LiF on Al, high reflectance at 1000 Å 2=17641
 LiF, on Al mirrors, extreme u.v. reflectance 1=16070
 Mg, optical const. at less than crit. wavelength 4=22844

Optical films—contd

MgF₂, abrasion resistance meas. 4=23112
 MgF₂ on Al, high reflectance for > 1200 Å 2=17641
 MgF₂, on Al, reflectance, minimum, 17 μ , after heating in vacuo 3=9601
 MgF₂-TiO₂, light-beam splitting 1=16097
 MgO, multi- and single reflection props., 0.45-1.03 μ 1=12992
 MgO surface, for reflectance standard 0.3-2.6 μ 3=1786
 Na salicylate, spectra and luminesc., 1750-5000 Å, room temp. and 80°K 4=28716
 NaCl, multilayers for interferometric spectrometer 0=16844
 Ni, abnormal absorpt. 4=22866
 Ni, absorption rel. to wavelength 2=11488
 Ni, evap., absorpt. and polariz. 2=23514
 PbCl₂ and MgF₂ dielec. multilayers, prep. and props. 0=16881
 PbF₂-Na₃F₆Al coatings, ageing and spectrometric use in u.v. 4=24376
 PbO, for optical filters 2=6537
 PbS, photosensitive, optical const., 0.8-4.0 μ 4=22873
 Pd, optical props., 2000-25 000 Å 4=22881
 Pd, thin, optical const. theory 4=22868
 Pt, high reflectance for < 1000 Å 2=17641
 Pt preparation and properties 3=9603
 Pt, reflecting, for vacuum u.v. 3=19005
 Re on Si, polarized thermal light emission 3=17380
 Rh, high reflectance for < 1000 Å 2=17641
 Sb₂O₃, production of clear films for Fabry-Perot plates 0=16880
 Se, for i.r. polarization, prep. 3=24060
 Se, i.r. transmission 1=18602
 Se, optical constants 3=25438
 Si, ellipsometric study method 2=19110
 Si, optical const. at less than crit. wavelength 4=22844
 Si oxide, optical props., 0.2-1.6 μ , rel. to appl. 4=22893
 Si, pure, optical constants meas. 4=13056
 Si, structure and reflecting power 0=19423
 SiO, abrasion resistance meas. 4=23112
 SiO₂ 2=8884
 SiO oxidized films on Al mirrors, reflectance 1=10095
 SiO on Al mirrors, effect of u.v. irradiation on far u.v. reflectance 3=19004
 Sn, complex refr. index for 0.9-11 μ wavelengths 2=10570
 Ta₂O₅, optical const. meas. 4=22896
 Te, unexposed to air, optical props. 4=22897
 ThO₂, optical props., 0.2-1.6 μ , rel. to appl. 4=22893
 TiO₂, light-beam splitting 1=16097
 TiO₂ on Ti, thickness and optical const. meas. 2=7370
 UF₄ on UO₂, interference, kinetic deriv. 3=24042
 ZnS antireflection films for i.r. detectors 1=9502
 ZnS, blooming of metallic films, use 2=7378
 ZnS, evap., ageing effects 0=3638
 ZnS on glass, in Fresnel zones, axicon 2=1258
 ZnS, for high u.v. reflectance 2=17641
 ZrO₂, optical props., 0.2-1.6 μ , rel. to appl. 4=22893

- surface quality, optical contrast transfer theory 2=1256

Optical instrument testing—contd

- surfaces, aspherical, by immersion to reverse spherical wavefronts 4=8400
- telescopes, interferometric meas. of angular magnification 2=13442
- television lenses, transmission meas. 1=12974
- test charts, sinusoidal, by filtering spatial frequencies 0=19396
- transmission function, complex, meas. with grating apparatus 0=19406
- transmission function, meas. with Foucault grating apparatus 0=19404
- transmission function, measuring apparatus, comparative tests on 0=19403
- von Eller optical synthesis machine 1=16066

Optical instruments

- Some instruments are listed separately, e.g. Refractometers.
- Abbe's theory, Czapski's book 2=13441
- for absorption analysis, instrument errors, improved calibration 0=19395
- adaptometer, dark, variable, multidimensional 1=10353
- adaptometer, for study of Troxler's effect 1=1619
- adjusting devices, precision mechanical 0=2233
- afocal, photoelectric and otherwise, error elimination 1=18580
- for alignment 4=18015-6
- alignment devices of two-mirror type 1=16062
- aluminizing technique for u.v. reflection efficiency 0=3402
- amplitude filters 2=1257
- analysis, using perspective drawing 2=95
- angular data converter, amplitude modulated reticle, error response 4=16214
- apertometer, for microscope objectives 1=11833
- atmospheric emissions, upper, technique 3=3509
- for atmospheric optics 0=4783
- attenuator, rotating-sector, for precision spectrophotometry 2=5162
- autocollimator, two-channel, recording 3=16746
- automatic design, computer programmes 4=24339
- axicon, Fresnel conic mirror 2=1258
- beam splitter and intensity controller, continuously variable 4=5373
- beam splitters (50/50%), dielectric-film type 3=7321
- binocular eyepieces, wide-field large-pupil 3=16739
- binocular telescopes, parallelism tolerances 0=6921
- binoculars, military 0=6922
- for bubble chambers 1=3097
- for bubble chambers, stereoscopy, refraction correction 0=1232
- cascade intensifiers, image fluctuations 0=8785
- centring, mounting error effect 3=11885
- chopper disk, precision 4=8399
- comparator, with automatic readout 4=11010
- conference 1=18585
- conference, London (1961) 3=14308
- contrast transfer, rel. to vision 2=21996
- corner reflectors and cavities, polarization props. 2=5190
- course grating for line intensity meas. 0=2251
- cross-wires, incorrect setting, due to optical illusions 0=19382
- daylight factor meter 0=14784
- decentring tolerances, computation 3=1791
- deflector, electro-optic 4=16226
- deflector, fast, digital, for laser, using double refraction of CaCO_3 4=16228
- design, automatic computation 0=14804
- design and production problems 2=21989
- dichroic beam splitters 1=10583
- diffraction resonator, reflection grating 2=19723
- diffraction, theoretical represent. 3=265
- diffractional light modulator 0=12494
- diffusing screens of high efficiency 0=8782
- dilatometer, high temp. rotor bore 0=3480
- discriminator, balanced, for light beam angle modulation 4=18368
- for dust nuisance emitted by chimneys 1=1623
- "effective source" concept and partial coherence 3=21530
- elastic constants, rods 3=6776
- electro-optical distance meter 1=12838
- electro-optical light modulator, the stressed-plate shutter 4=2821

Optical instruments—contd

- energy flux, improper integral of cylindrical functions 4=24352
- Evaporograph, for infrared imaging 2=15726
- exit pupils, optimum diameters 0=6914
- Fabry-Perot etalon, displacement of a flat 0=16851
- far i.r., review of research in Japan 4=24351
- fibre bundles, optical transfer properties 4=18395
- fibre optics duodenoscope and ureteroscope 1=8226
- fibre optics, visible spectrum dielectric waveguide modes 1=8225
- fibres, i.r., As_2S_3 4=11336
- filter photometer for reflection measurements 0=2223
- filter, rotating, three-step, variable 3=16756
- finite collimating aperture measurement error in scatt., geometrical calc. 4=16252
- fluorometer, for lifetimes, 10^{-5} – 10^{-8} sec, by modulated light 3=5514
- focometer, accuracy rel. to parameters 3=9585
- frequency response measurement, scanner 1=9473
- Fresnel zone plate for far u.v. and X-ray region 1=4448
- for gas diffusion study, diffusion coeff. meas. 0=8697
- graticule, metal evaporation technique 2=2871
- guide, large, core in medium of slightly smaller dielectric const. 4=14345
- haploscope, for vision studies 0=816
- Hough-Powell digitizer, slit source illumination 4=5371
- i.r. 4=8364
- i.r. absorptiometer, using interference filters 0=4754
- i.r., classification of materials 4=2810
- i.r. gas analysers, increasing sensitivity 0=12489
- i.r. image tube, electron scanned, small-target detection 0=167
- i.r. tracking systems 1=12983
- image amplifiers, use of elec. image convertors 0=6913
- image intensifier 0=3617
- image intensifier using secondary electron emission 0=10757
- image intensifier, transmission type 0=7142
- image intensifiers and the scotoscope 4=24341
- image reducer-immersed detector system for i.r. 3=7314
- image rotation by oblique reflection 4=308
- information unit proposal, and resolving power 1=18581
- interference-modulation, resolution, relationship with res. of diffraction grating 0=10771
- ionization chamber for vacuum u. v., 1050-1500 Å 4=27303
- lens bench, with flat-field relation device, 0=8779
- lens mounting, large, high-precision, strain-free 2=17588
- lever gauge, for thickness meas. 3=14035
- light amplification device 1=12981
- light amplifier 0=3795
- light chopper, high frequency 2=19693
- light probe for turbulent concn. fluctuations meas. 4=2638
- light sources, of intensity decreasing in geom. succession 1=18582
- longitudinal positioning, precision method 0=6915
- for luminescence spectra studies, in microscopy 0=14805
- luminescent fibre chambers and intensifier screens 9=18150
- maser, quantum oscillators in multimode cavity, theory 1=10789
- micrometer eyepiece, coincidence split image 3=18971
- microspectrofluorimeter 0=14826
- mirror and prism angle-meas. instruments, adjustment 0=12397
- mirror-prism optical elements, wide angle tracking 0=8781
- mirror system selecting field of view 3=16745
- modulator, electro-optic light, strain effects 4=18369
- modulator, interferometric optical 4=24386
- modulator, light, rel. to electro-optical effects in crystals 4=21268
- modulator, using microwave ferrimag. resonance 3=14325
- modulator, microwave, using Kerr cell 2=87
- modulators or demodulators, Foster-Seeley prisms, for doubled intensity 4=5372
- moiré fringe reading head for use with fine grating 0=14844

Optical instruments—contd

- monoculars, overlapping, ultrawide-field viewing system 2=17596
- "movialas", rotating prism system 0=166
- nephelometer 3=6963
- nephelometer, visual, for high molec. wt. solutions 0=12495
- for night vision, aberration tolerances, for low spatial frequencies 0=19401
- object detector, for in-focus objects 4=29745
- optical emission line profile analyser 2=22034
- optical engineering, review 1=17593
- optical lever, review of development and applications 1=2854
- optico-acoustic non-selective receiver 1=12984
- optico-acoustic radiation receivers 0=8714
- for particle-size anal. multichannel photoelec. scanning 0=4682
- performance of windows with axial temp. gradients 2=97
- phase analyser, with progressive u.s. wave 1=18611
- photo-contact tube for weak source study 0=6957
- photoelectric image-sharpness meas. 3=11901
- pipe transfer between high refr. index media 4=24350
- polarization effects, theory and practice 4=8459
- prism scanner 0=8780
- production of components, new techniques 3=16748
- pupil, parallel subdivision principle, applics. 2=22002
- quantum efficiency meas. for phosphors 0=19393
- quarter-wave compensator, calibration 0=14855
- quarter-wave plate, composite, theory 3=9627
- radioactivity in, due to KBr components 0=19409
- range finder, auto-focus 0=14859
- recognition using vibrating fibres 4=18394
- recording optical lever 0=5150
- reflectivity meas., auto-collimation adjustment 0=12475
- reflectivity meas., method 0=10754
- reflectometer, absolute, for use with Cary 14 spectrophotometer, at low temps. 4=11339
- reflectometer for vacuum u.v. 0=1484
- reflectometer for vacuum u.v. using $\text{CaSO}_4\text{:Mn}$ phosphor 0=16829
- resolving power, ambiguous image concept and diffraction 4=18390
- resolving power, calculated and detected images, various criteria 1=12978
- resonator, mode meas., using afterglow and laser 4=16221
- retardation plate for polarized light 3=14379
- rocket tracking systems 3=18666
- Ronchi ruling, angular meas. 3=9583
- ruling engine control by interferometer, modulated 2=19724
- scanner, automatic, for electrophoresis and chromatography paper strips 0=4759
- seal for optical windows 1=5311
- sextant, space, coaxial dual-field optics 4=7994
- shadow graph slits, manufacture 0=6916
- shutter, high-frequency, using electro-optical effect in ADP 0=20973
- shutter for square-wave exposures for vision expts. 3=14326
- spectral comparator image inverter 3=24021
- spectrophone with a multiple passage of radiation 0=137
- specular reflectance precision meas. 0=164
- spot light image rotating in circle, device 3=18970
- stereo-image prod., from plan and elevation 2=7318
- stray light meas., theory and expt. 3=9581
- sun-tracking device 2=17597
- superposed crystal plates between crossed polars, applications 0=3653
- for surface texture meas. 4=30875
- suspensions, scattering, continuous meas. circuit 2=2454
- television, optimum viewing conditions 3=7312
- tensiometer, photoelectric 0=10644
- tests, Hartmann combined with spot diaphragm 3=11489
- theodolite, sighting precision 3=18973
- theodolites, survey 0=5147
- thickness gauge 0=6722
- for thin film, property measurements 1=7700
- tracing of skew rays through toric surfaces 1=16052
- tracking, wide-angle 0=8781, 19388
- transfer function, Japanese work 2=13429

Optical instruments—contd

- transistors as high-speed light pulsers 1=6957
- 2-mirror system with 140° field 1=16069
- u.v., progress review 3=9187
- u.v. radiation detector 3=18974
- use of variable retardation plate 3=21571
- vacuum-stage for crystallographic obs., low temp. 4=16222
- vacuum u.v. radiation of mag. compressed plasma 3=7505
- vibration pickup, optical calibration 1=9454
- for vision, aniseikonia, meas. and corr. 4=4985
- wave height in hydraulic models by stereoscopy 1=18381
- CuCl light modulators 4=10171

Optical materials

- See also Filters, optical.
- calcite optical flats, polishing technique 1=10229
- conference 1=18586
- crystals, i.r. and Raman processes, theory 3=23061
- diffraction gratings, below 2=1000A 2=116
- films, antireflection, on Ge 2=98
- glass for bubble chamber windows, props. 4=5906
- glass for bubble chamber windows, specification and testing 4=5911
- glass, for cemented doublet aplanats 1=4441
- glass, dispersive properties 2=22000

Orbital calculation methods

(Heading introduced in 1961)

- adiabatic energy surfaces using "atomic associations" method 4=15320
- ALGOL compiler use for auxiliary functions and mol. integrals 4=20033
- allyl ions, Hartree-Fock calcs., unrestricted, spin props., computation by improved method 4=28174
- alternant MO approximation, correlation effects 3=19966
- alternant MO, generalization to states with different multiplicities 3=8242
- alternant MO method 4=3889
- alternant mol. orbital method (AMO); closed-shell struct., many-parameter energy expression 3=2602
- alternant mol., overlap integral occurrence 4=22341-2
- alternant molecular orbital, cyclic closed shell structure systems 4=9695
- alternant molecular orbital method, general 2=14306
- alternant orbitals calc. for allyl 1=3560
- ambiguity in determination of self-consistent bond orders 1=870

Orbital calculation methods—contd

- analytic wave-functions, inclusion of correlation 3=6345
- angular momentum quantum theory, review 4=19921
- approx. radial functions for first-row transition-metal atoms 3=10435
- approximation of zero differential overlap 1=11108
- aromatic mol., ring current effects calc. 2=16539
- atom, statistical model, with electron gas effects 4=3770
- atomic electrons, importance of ang. correl. 2=12279
- atomic orbital configuration wavefunctions for small molecules 3=12806
- atomic orbitals with angularly dependent Z eff. 1=19649
- atomic orbitals, arbitrary angular peakedness 1=12302
- atomic polarizabilities 3=22483
- atomic screening consts. from SCF functions 3=17521
- atoms, electrostatic interactions calc. 2=16465
- atoms and molecules, several quanta reson. 4=28098
- atoms and mols., electron correl. problem 3=12743
- atoms, neutral, electronegativity eval. 2=10960
- atoms, spin-orbit coupling det. 2=22884
- atoms, two-electron, quasi-stationary states 3=2554
- benzene, multi-centre pi-electron integrals 3=12847
- benzene, Pariser-Parr theory, bandwidths and transition intensities 4=25703
- benzene spectrum, quantum mechanical integrals, Pariser-Parr theory 4=22390
- benzene, spin-spin interaction, correction 3=8290
- bond orders, Hall's method, generalization 3=10496
- bond orders, by SCF MO and simple MO methods 1=7480
- bonding in cubic complexes 1=4946
- bonding in icosahedral complexes 1=3564
- bonds in molecules 1=19647
- Brillouin-Wigner perturbation differential eqns., variational solns. 4=28101
- carbon ground state and negative ion wave functions 1=5963
- central potentials and modified boundary conditions for H_2 1=3559
- centrifugal distortion effects in asymm. rotator 3=2595
- chain mols., HMO calc., exact solns. of secular eqns. 3=25157
- charged particle in Coulomb field, circularity tendency 2=7557
- Clebsch-Gordan coeffs. calc. 4=21039
- Clebsch-Gordan coeffs., formulae deriv. 4=66
- Clebsch-Gordan coeffs. of group D' 4=21040
- Clebsch-Gordan coeffs. of SU , group 4=67
- Clebsch-Gordan coeffs., sums of products 4=65
- Clebsch-Gordan coeffs., sums of products, diagram operations 4=64
- Clebsch-Gordan coeffs., sums of products, graphs 4=63
- complex configs., electrostatic interact 3=12746
- complex ion states in crystal field, group theory 4=20175
- conference on quantum mechanics, Sanibel Island (1963) 4=6449
- configuration interaction effects on intensities and phase shifts 2=1952
- configuration-interaction method 4=9694
- configuration interaction method, appl. to He 2^3S state 2=22393
- configuration p^2 , vector coupling schemes 4=1181
- conformation stability, for degenerate states 3=19955
- conformational stability, for nondegenerate states 3=19956
- conjugated systems, bond order matrix 3=8237
- conjugated systems, open- and closed-shell SCF method 1=9935
- constant and minimum energy orthogonalization 4=30366
- Coulomb wave functions at low energies 4=25470
- correl. of electrons in same shell, exchange polarization, in-out effect 3=8175
- correlation effects in two and three-electron systems 3=19922
- criteria for construction of SCF MO wave-functions 2=16497
- crystal field approximation 1=4963
- crystal field theory, covalency 4=20151
- crystals, orbital harmonicity, coordination 1=3618
- cuboctahedral bonding 1=19648
- cyclic systems, alternant mol. orbital method 2=1430
- d^5 configuration, spin-orbit matrices 3=2545
- d-electron systems, weak-field coupling 3=22526
- Debye-Hückel potential, bound states 4=18791

Orbital calculation methods—contd

- density matrix, first-order, for spin-projected single determinant, natural expansion 4=20028
 diatomic homonuclear mol., dipole moment induction 2=20792
 diatomic homonuclear mols., forces operative 3=25079
 diatomic, Hulbert-Hirschfelder potential reliability 4=25618
 diatomic molecules, for small internuclear separations 2=18443
 diatomic mols., spectroscopic consts. from Hartree-Fock wavefunctions 4=15326
 diatomic mols., use of two-centre functions 4=1249
 diatomic, multi-configurations calc. 3=15318
 different orbitals for different spins 4=15319
 for dihedral cpds 4=25622
 dipole velocity integrals, calc. 4=6547
 Dirac-Coulomb Hamiltonian with two vector invariants 4=12331
 Dirac-Coulomb spherical solns., new represent. 2=11866
 Dirac density matrix, approximations 4=12347
 Dirac and Schröd. eqns. for Coulomb potential 3=16525
 effective potential approx. method 4=19926
 eigenfunctions of both S^2 and S_z operators, Slater determinants 4=20020
 electron correlation in atoms and molecules 1=13912
 electron, in Coulomb-correl. many-electron systems 2=6077
 electron density function, effective, three-dim. 2=22876
 electron interaction with e.m. field, nuclear Coulomb field effects 1=19576
 electron MO theory of diamagnetism, use in calc. C chemical shifts 4=12518
 electron systems, Heitler-London approach, cluster expansion 4=17629
 electronic wave-functions, computer programme 4=12334
 electrostatic calc., two and three-centre integrals 3=6374
 elliptical coordinate wave-functions, nonintegral exponents 2=8117
 energy eigen values, lower bound procedure 4=29530
 energy levels of particle in screened Debye field 3=18732
 energy matrix of particle system in given spin state 4=2558
 equivalent electrons, orbit-orbit interact. effect 4=19929
 ethylene, Pariser-Parr theory, bandwidths and transition intensities 4=25703
 exact wave-functions, natural expansions 2=19427
 excited states, variation-perturbation method 1=7422
 f^3 config., eigenfunctions 4=3764
 FE method derivs., bonding condition 4=20025
 FEMO calculations for pyridine and pyrimidine 1=9936
 Fermi surfaces in form of net 3=12943
 fermions, correl. effects, many-particle excit. expansion 4=5100
 flight analysis in field of one attracting centre 4=15911
 fluorescein, spectra, by LCAO MO method 3=2647
 Fock-Dirac density matrix, perturbation theory 2=12275
 formaldehyde, deuteron field gradient calc. 4=30462
 four-dim. electron density function 2=18391
 four-electron, generalized product functions 3=10449
 free-electron theory appl. to three-dimensional networks 1=4977
 free-free transitions of electron in ion field 3=22497
 g-tensor, gauge-invariant theory 3=6384
 for g-value 4=24868
 Gauss integral transform method 1=17250
 Gaussian, for atom-in-molecule calculations 1=8849
 Gaussian correlation functions, two-electron systems 4=28100
 Gaussian functions in wavefunction calc. for small molecules 3=19964-5
 Gaussian orbitals, atomic, quantum mech. integrals 2=12278
 Gaussian orbitals, for many-electron mol. wave functions 2=18438
 Gaussian wave functions for polyatomic mols. 4=25621
 Gaussian wave-functions for 10-electron systems 4=25504
 Gaussian wave-functions of 10-electron systems 4=25650
 general SCF theory corrections 4=20022
 Green's field functions method 4=19920
 group theory and aromatic mols. 2=3757

Orbital calculation methods—contd

- guanine-cytosine base pair, semiempirical SCF-LCAO-MO calc. of electronic structure 4=20086
 H-type one-electron Hartree parameters 4=1300
 halomethanes, C^{13} -H coupling consts. substituent effects, max. overlap orbital treatment 4=22405
 Hamiltonian relativistic terms, closed-shell-plus-one structure 4=3765
 Hamiltonian, rigid asymm. rotator-type, trace formulae 3=14029
 Hartree-Fock approx., perturb. method 3=3754
 Hartree-Fock approximation, stationary properties 1=8806
 Hartree-Fock calc. of mag. field at Fe nucleus 1=3628-9
 Hartree-Fock calcs., unrestricted, spin props., computation by improved method 4=28174
 Hartree-Fock, electron correl. effects 2=10193
 Hartree-Fock eqn. in terms of localized orbitals 1=4890
 Hartree-Fock eqns., perturbation treatment 1=2272
 Hartree-Fock, errors involved 2=1954
 Hartree-Fock functions with limited basis 3=8239
 Hartree and Fock generalized methods 1=4895
 Hartree and Fock generalized methods 1=11061
 Hartree-Fock Hamiltonians and separable nonlocal potentials 4=29531
 Hartree-Fock method generalized for fermion system 1=8070
 Hartree-Fock method for solids, generalized Koopman's theorem 1=11175
 Hartree-Fock SCF functions, computer programme 1=13909
 Hartree-Fock SCF theory, analytical methods 1=7421
 Hartree-Fock, stability 2=22879
 Hartree-Fock, unrestricted, validity, correlation effects 4=6453
 Hartree-Fock, unrestricted, $Z^{-1/2}$ expansion 4=19936
 Hartree-Fock wave functions, Z expansion 4=1198
 Hartree and Hartree-Fock approx., coordinate and momentum matrix elements interrel. 4=19933
 Heisenberg exchange interaction, molecular model 1=8854
 Hellmann-Feynman, wave functions 2=20772
 heteroatom radicals, SCF calc. of spin-density distrib. 3=10530
 hole config. rel. to electron config., coeffs. 4=28104
 horizontal and vertical correlation in π -electron systems 4=25619
 Hückel MOLCAO, Hartmann approx. 4=22331
 hybridization, rel. to heat of hydrogenation 2=545
 hydrocarbon, conjugated, π orbital, doubly occupied, correl. energy 3=22576
 hydrocarbons, conjugated, nonalternant, electronic spectra, calc. by limited configuration interaction method 4=20087
 hydrocarbons, extended Hückel theory 4=1243
 hydrogenic functions, diatomic, generalized radial integrals 4=22276
 hydrogen-like analytic wave functions, parameters calc. 2=171
 hydrogenlike radial functions, orthogonality 3=6341
 Hylleraas expansions, half-integral 3=12750
 hyperfine interactions, core-electron contribs., theory 4=17235
 hypervirial theorems 2=6210
 ionic crystals, d-electron covalency theory 4=12557
 independent-particle model, self-consistent field theory 3=6340
 induction and dispersion energies at finite distances 2=3714
 integrals, 2-centre Coulomb and hybrid types 4=6549
 integrals with functions of $\vec{r}_{12}, \vec{r}_{13}, \vec{r}_{23}$, calc. 4=1177
 interaction of degenerate configurations 2=20777
 interaction of two electrons, operator matrix element 4=1186
 isochronous derivs. matrix 4=15912
 LCAO inclusion of atomic functions overlap 4=20021
 LCAO-MO, general theory, diophantic uncertainty parameters 1=7479
 LCAO-MO ω -technique for molecules 2=16498

Orbital calculation methods—contd

- LCAO theory of nuclear spin coupling consts. 4=25737
 LCAO wave-functions for F-centres from ENDOR data 2=2104
 1^N configs., configuration interact. effects 4=1174
 1^n config., term energies variance, Moszkowski's formula proof 4=6454
 ligand field theory, hybrid orbitals 2=20774
 ligand field theory, spin-orbit coupling 3=25161
 limited configuration interaction for diatomic molecules 2=6196
 limits of error at arbitrary point in theory 3=10436
 linear combinations of atomic associations (LCAA) 4=6539
 localised, calc. 4=12433
 long-chain conjugated mols., LCAO-SCF theory 4=1328
 long-chain polyenes, LCAO-MO calc. 2=3768
 macromolecules with conjugated double bonds 2=23020
 magnetic multipole radiative transitions, $\Delta S = \pm 1$ 4=17236
 magnetic screening consts., H_2 mol. 2=10272
 magnetic shielding consts., integrals 2=12342
 many-electron problem, statistical approx. 4=12332
 many-electron quantum mechanics, density matrix 1=13911
 many-electron theory of atoms and molecules, effect of correlation on orbitals 3=12744
 matrices which anticommute with Hamiltonian 2=12274
 matrix components of Hamiltonian w.r.t. correl. wave functions 3=6344
 matrix elements of operators for almost closed shells 4=1187
 maximum overlap atomic and molecular orbitals 1=11057
 maximum-overlap directed-hybrid orbitals 1=11106
 maximum overlap method, comparison 3=10497
 metals, coupled orbits, two dimensional, theory and appl. 4=28299
 metals, perturbation due to impurity, tight-binding approx. 2=3910
 methane, ground-state wavefunctions, calc. using SCF MO method 4=20088
 methane, LCAO-MO-SCF wavefunctions, octopole moment calc. 4=22408
 use of method of fractional parentage coeff. 4=20024
 MO LCAO method, local and total symmetry 4=1247
 molecular diamagnetic susceptibility tensor, approx. method 1=7483
 molecular integrals, numerical calc. 1=12303
 molecular, new method, esp. for cyclic systems 3=2601
 molecular orbital distortion by perturbing molecule 4=9790
 molecular orbital and localized valence bond methods, criterion 4=1248
 molecular two-centre hybrid and exchange integrals 1=14068-9
 molecular wavefunctions containing 1st- and 2nd-row atoms, simple basis set 4=17275
 molecular wave-functions, new approx. method 3=2603
 molecules, rel. to C_6H_6 vibr. freqs. calc. 4=22392
 molecules, diamagnetic, Faraday effect, theory 3=6383
 molecules, diatomic, dissociation error reduction 4=12432
 Molecules, use of Gaussian functions 4=12434
 molecules, hybridized valence states, calc. 2=6211
 molecules, large, semiempirical methods 2=8119
 molecules, lower bound for energy levels 3=25084
 molecules, normal co-ordinate analysis, theory 4=17297
 molecules, and solids, exchange, correl. and spin effects, review 2=14319
 molecules, 3-centre exchange and 4-centre integrals over 1s atomic orbitals 4=25632
 molecules, transition probabs. calc. 3=12803
 molecules, zero-point energies, perturb. methods 3=12795
 multiple-centre integrals, dipolar interaction, in matrix element over LCAO orbitals 4=3843
 nI config. interactions, spin-orbit and mag. hyperfine 4=6484
 $n \rightarrow \pi^*$ transitions, comparison of exciton and MO calc. 3=12804
 naphthalene ions, Hartree-Fock calcs., unrestricted, spin props., computation by improved method 4=28174

Orbital calculation methods—contd

- natural orbital expansion, for calc. K-shell energy shifts in perturbation theory 4=15264
 natural orbitals in the geminal product approx., direct determ. 4=22275
 N-electron system, energy, Bopp's approx. 4=22288
 non-adiabatic theory, diatomic molecules 4=15334
 numerical self-consist. field calcs., total energies 4=28103
 one-centre integrals, computer programmes 3=8225
 one-centre integrals of extraordinary functions 3=6339
 one-centre two-electron integrals, general soln. 2=14183
 organic aromatic and olefinic, open shell SCF field 4=25627
 organic cpds., Kuhn's electron repulsion addition 4=25620
 orthogonal, rel. to generalized Wannier functions 3=6452
 orthogonal many-electron group orbitals 3=6338
 overlap integrals, using Slater functions 2=10271
 overlapping, partial, infinite energy values interpret. 2=6217
 π -electron systems, split p-orbital method 2=10268
 pair correlations in closed-shell systems 4=12330
 Pariser-Parr approx. validity, polyatomic conjugated mols. 4=15323
 Pariser-Parr theory, bandwidths and transition intensities 4=25703
 parity impurities due to weak electron interact. 4=5957
 parity-unfavoured transitions not in forward scatt. 4=27074
 partitioning of Hamiltonians and molec. energies 4=30417
 pentadienyl ions, Hartree-Fock calcs., unrestricted, spin props., computation by improved method 4=28174
 permutation groups for molecular integrals, tables 3=22525
 perturbation eqns., iteration-variation procedures 4=1246
 perturbation theory, calcs. 2=3680-1
 perturbation theory, chemical bonds theory 3=1614
 perturbation theory of many-electron systems 1=7423
 perturbation theory, reduction of many-electron problems 2=6079
 pI and p^I configs. for different coupling schemes 4=1189
 p^I config., electrostatic energy rel. to coupling schemes 4=1185
 p^I config., spin-orbit interact., coupling schemes 4=1190
 phase mechanics velo. potential, calc. 4=12357
 π -electron correl., analogy methods 2=18441-2
 π -electron ionization 2=2011-12
 π -electron, perturb. calc. for aromatic hydrocarbons 2=6213
 π -electron systems, higher p orbitals, effects of overlapping 2=14309
 Poisson transform, of

$$\sum_{j=1}^N F(\cos 2\pi j/N) \cos 2\pi jN 3=21196$$
 polarizabilities and Sternheimer shielding factors 3=17518
 polarized orbitals method for electron scatt. by H atoms 1=4298
 polyatom system, MIT programmes for mechanized calc. 4=12435
 polygon conditions in 18j coeffs. 4=1191
 polymethine chains, LCAO-MO method 4=6636
 polynucleotides, Hückel approx. in energy band structure calc. 4=20140
 polyphenyls, SCF-LCAO-MO theory, mobile bond order calc. 4=22413
 potential-energy surfaces, local approx. by surfaces permitting separation of variables 4=28158
 quadrivalent max. overlap hybrid orbitals 2=16496
 quantum theory, polycentric integrals eval. 3=8221
 rare earth ions, spectroscopic and mag. props. Hartree-Fock calc. 4=30504
 reduced density matrix and natural spin orbitals and geminals symm. props. 4=6455
 relation to classical wave functions $\sqrt{p} \exp(iS/\hbar)$ 4=5061
 rotor mol. of orthorhombic symm., fourth-order Hamiltonian 3=25083
 Runge-Lenz vector in presence of elec. field 4=11763
 SCF-CI calcs., unlinked clusters, appearance 4=28102
 SCF eqns., numerical solns. 4=1194
 SCF theory, LCAO approx., excited states 4=22272-4
 SCF-LCAO-MO wave-functions appl. to
 HF_2 2=6201

Orbital calculation methods—contd

- Schrödinger eqn., approx. solns., review 4=5058
 Schrödinger eqn. for one electron, det. of eigenvalues and eigenfunctions 2=22883
 Schrödinger H atom in n-dimensions 3=7105
 self-consistent field eqns. with correlations 1=1702
 self-consistent field eqns. soln. 2=14185
 self-consistent-field theory, general treatment 3=17563
 semiempirical one-centre Coulomb repulsion integrals 3=17560
 shell theory, creation and annihil. operator methods 4=30365
 Shockley surface states, delta function potentials 2=6310
 Sinanoğlu's "exact-pair" theory, comp. with separated-pair theory 4=6450
 single-centre expansion method 3=22554
 single-determinant wavefunctions, spin-component analysis 3=23785
 single substitution configurations 2=18439
 Slater atomic orbitals, cal. of 2-centre integrals 3=22532
 Slater orbital, one-electron operator expectation value 2=20773
 Slater terms, graphical calc. 4=25617
 spin Hamiltonian for even electron number and even multiplicity 4=1197
 spin-orbit matrix elements for configuration f^n , selection rules 1=3497
 spin properties of π -electrons 4=25629
 spin-spin coupling across several bonds 3=719
 spin-spin coupling const., geminal, hyperconjugation effect 3=22520
 split p-orbital, Dewar's method, evaluation 3=17561
 split-p-orbital method 2=2009
 split-p-orbital method, difficulties 3=8238
 square of radial integral for transitions in H-like atoms 1=2276
 statistical density matrix, analysis 2=514
 statistical theory, continuous bases of represent. 4=1173
 strain birefringence meas. using tensile testing machine 1=7703
 supermultiplet theory and harmonic oscillator 2=10192
 symmetry projections in group theory 4=2567
 Thomas-Fermi theory, classical approx. 3=697
 Thomas-Fermi theory of excited states 4=28105
 three-body problem, higher ang. momentum eigenfunctions 1=12242
 transformation matrices of six ang. momenta, rel. to j-coeffts. 4=1182
 transformation matrices of six ang. momenta, simplification 4=1183
 transformation matrix elements for p^l, p^3l, p^5l configs. 4=1188
 transition-ion complexes in crystals 1=14152
 transition metal cyano complexes, overlap integrals 3=10529
 transitions, SCF approx. 1=4891
 triarylborons, pi-electron energy calc. 4=12511
 triethylammonium-(tetracyanoquinodimethane)₂, rel. to elec. conduction and charge transfer in crystals 4=22729
 truncated reactive operator formalism, appl. 4=2553
 2lj coeff. classification and diagrams 4=19927
 two-centre Coulomb and hybrid integrals 4=1255
 two-centre Coulomb potl. approx. 3=22610
 two-centre exchange integrals, calc. scheme 4=28178
 two-centre integral eval. 2=8055
 two-centre integrals between orbitals 1=19650
 two-centre integrals over solid spherical harmonics 3=19967
 two-centre one-electron integrals 3=12792
 two-centre overlap integrals eval. 2=12340
 two-electron atoms, exponential correlation functions 4=15269
 two-electron exchange between colliding nuclei, T-matrix theory 4=9633
 two-electron integrals, one- and two-centre, Fourier convolution calc. 4=3763
 two-electron matrix elements of orbit-orbit interaction operator 4=22282
 two-electron systems, real wave-function natural calc. 4=12333

Orbital calculation methods—contd

- unrestricted Hartree-Fock method for equal azimuthal quantum numbers 4=1184
 valence bond wave-functions, population analysis 3=6375
 variational calc. for ethylene 2=3772
 varying orbital exponents in MO theory 3=4738
 vector coupling schemes, electrostatic interaction operator 4=1193
 Waller-Hartree and Debye-Ehrenfest methods, X-ray and electron intensities scattered by NH_3 and H_2O mols. 4=6522
 wave-function for free electron near an atom 1=12239
 wave-function from many-electron group orbitals 2=8054
 wavefunctions, optimization by scaling 4=20027
 wave-functions of single determinant type 1=15679
 zincblende lattice, orthog. plane wave method 3=10625
 AB_2 mols., MO-LCAO approx., Walsh rules 3=22519
 AB_n molecules, one-centre perturb. method 4=1244
 B_{10}H_4 , mol. orbitals, LCAO calc. 2=20795
 BeO ground state, MO approx. 4=20037
 CH bond, LCAO-MO 4=30424
 CH₄ 4=12507
 C_2N_2 , ground state wave-function 2=6199
 CO, Rydberg excited levels of $^1\Sigma^+, ^3\Sigma^+, ^1\Pi, ^3\Pi$ symmetry 4=30425
 H atom, nonrelativistic Schrödinger eqn., boundary conditions 3=10444
 H, electron scattering, elastic, polarized orbital method 4=28149
 H molecule-ion, statistical theory 4=12451
 H, off-centre calcs. using Coulson-Barnett and Slater-orbital radial factors 4=22291
 H_2 , B state, valence bond function transformation 4=6567
 H_2 , natural orbital representation 4=15335
 H_2 , Schrödinger wave eqn. solution 4=30433
 H_2 , spatial correl. of two electrons 2=16511
 H_2 wavefunctions, optimization by scaling 4=20027
 H_3 complex, "different orbitals for different spins" 4=28215
 H_2^+ , three excited states 4=15332
 H_2^+ , atomic polarization 2=14315
 H_2^+ , exact function, rel. to variational functions 4=25641
 H_2 and H_2^+ , many-centre wavefunctions 4=12356
 H_2 and H_2^+ , SCF-LCAO-MO calc. 2=16512
 $\text{H}_3^+, \text{H}_3, \text{H}_3^-$, electronic wave-functions 4=25675
 H_8 ring, in MO and alternant MO approx. 3=8243
 HCl, electronic structure calc. 4=25649
 HF, charge distributions, analysis 4=12453
 HI, Morse oscillator matrix elements for vibration-rotation lines 4=9710
 He atom, Hartree-Fock, from many-electron trial wave function 4=1202
 He, ground state 4=22297
 He ions, electron scattering, elastic, polarized orbital method 4=28149
 He, SCF theory, LCAO approx. 4=22272-4
 He wave-functions from Slater orbitals 1=2278
 HeH⁺ ground state, one-centre wavefunction 4=28187
 Ho^{3+} , free ion, 4f configuration calc. 1=19584
 I_2 , crystalline, space group treatment 4=17335
 K ferricyanide, mag. d-wave functions 2=18509
 KNiF_3 , covalency, LC^ΔO -MO model 3=12893
 KNiF_3 , optical and mag. props. 3=933
 LiF wavefunctions, optimization by scaling 4=20027
 LiH, valence-bond wave functs. analysis 2=12338
 N, Hartree-Fock-Slater wave-functions 4=12370
 NH_2 radical, H^+ and N^{14} coupling, theory 2=3767
 O, Hartree-Fock-Slater wave functions 4=12370
 Pr IV $4f^2$ ions, orbit-orbit interactions 4=15262
 S_{12} electrons interval factor, relativistic corr. 2=18399
 SO_4^{2-} and SO_3^{2-} , normal co-ordinate analysis, theory 4=17297
 TiO molecule, SCF-LCAO-MO calc. of low-lying electron states 4=9729
 XH_n mols., one centre expansion method 3=6386
 Xe fluorides, rel. to chemical shifts 4=20074
 XeF_2 , strengths of vibronic transitions, calc. 4=17298
 XeF_4 , strengths of vibronic transitions, calc. 4=17298
 XeF_4 , MO treatment of electronic structure and spectrum 4=17299

Order-disorder transformations

 acetaldehyde and propionaldehyde vapours, I₂-catalysis of decomposition 4=10642
 acetaldehyde, molec. J-coupling and internal motion 3=737
 acetaldehyde, n.m.r., J coupling theory 3=14790
 acetaldehyde vapour, fluorescence 1=12929
 acetaldehyde, vapour pressure curve, calc. 4=2892
 acetaldehyde-water mixtures, n.m.r. studies 0=6819
 acetamide-nitrophenol complexes in benzene, from i.r. spectrum 4=20077
 acetamide, Raman spectra and phase changes 0=5948
 acetate solutions, ultrasonic absorption, compressibility 1=6858
 acetic acid, adsorption by Ge surfaces 0=12115
 acetic acid, aq. solns., ultrasonic studies 4=18196
 acetic acid and chloro derivatives, n.m.r. of solid 1=8856
 acetic acid, interfacial phenomena with toluene 1=2742-4
 acetic acid, monomeric and dimeric, Urey-Bradley force consts., normal coordinate analysis calc. 4=28244-5
 acetic acid, n.m.r. study of structure 0=18231
 acetic acid, paramagnetic resonance detection 1=10799
 acetic acid, proton mag. res. study 1=12902
 acetic acid, r.f. absorption spectra, dielectric constant 1=12894
 acetic acid, in Si etchants, contribution to etching 0=4600
 acetic acid, solid, effect of water on diel. props. 1=17826
 acetic acid, u.s. absorption at 450 kc/s 0=5096
 acetic acid, ultrasonic props. of binary mixtures 1=6859
 acetic acid in very dilute solutions, dielectric polarizations 3=21394
 acetic acid-water-butane, 3 coexisting phases, critical phenomena 4=24442
 acetic acid and water equimolecular solutions, Raman spectra 1=146
 aceto-acetic ester, n.m.r. long-range chemical shifts 1=12309
 acetone, acetyl radical decomposition 2=12980
 acetone and acetone-d₆, r.f. spectra, dipole moments and rotational consts. 0=4212
 acetone, adsorption by Ge surfaces 0=12115
 acetone, aq. solns., density fluctuations, study by Rayleigh light scatt. and hypersound dispersion 1=4341
 acetone-chloroform, light scatt. 2=21909
 acetone, conduction elec., fluctuations, freq. var. 4=21151
 acetone, in diffusion chamber, effect on tracks 2=1639
 acetone, double refraction in strong shock waves 3=7205
 acetone, effect on fluorescence of acetylanthracene in hexane 1=9400
 acetone, effect on thermal cond. of ZnSO₄·7H₂O 1=14192
 acetone, far-u.v. photolysis 4=29231
 acetone, flash photolysis. 3=25835
 acetone, flash photolysis with filtered light 1=6574
 acetone, with HI, photolysis 2=12980
 acetone, ionic solutions, i.r. spectra 4=18203
 acetone-isooctane system, vapour press., and activation coeffs. 4=16143
 acetone, light scatt., orientational interaction and rotation of molecules 4=24162
 acetone, light scattering, Brillouin compts. 0=14847

Organic compounds—contd

acetone, liquid, lack of orientational ordering 1=11747
 acetone, liquid, spec. ht. 2=11356
 acetone, luminescence 2=15609
 acetone, mixtures with isopropanol, boiling pt. and surface tension 1=15858
 acetone mols., excitation modulation spectroscopy 3=12802
 acetone, n.m.r. of proton complexes at -75°C 1=11767
 acetone nitril, light scatt., orientational interaction and rotation of molecules 4=24162
 acetone nitril, in soln., i. r. absorption, temp. depend. 4=27182
 acetone, paramagnetic resonance 1=15907
 acetone, phosphorescence decay time, calc. 0=506
 acetone, Raman spectra temp. dependence 1=9395
 acetone, Rayleigh scattering depolarization factor meas. 0=19450
 acetone, relaxation times at 3 cm 1=6870
 acetone, rotation-internal torsion levels, calc. 0=15696
 acetone, saturated, vapour pressure meas. apparatus 3=19071
 acetone, self-diffusion coeff. 0=3513
 acetone solutions, dissolved ion interaction, formation of complexes, i. r. absorption 4=26749
 acetone, Sumoto effect, as electrolytic liquid 1=15893
 acetone, superheat, measurement 1=15850
 acetone, torsional vibration of methyl groups 0=20602
 acetone, u.s. dispersion, at 180 Mc/s 1=18405
 acetone, u.s. wave diffraction, angular width 3=21356
 acetone, ultrasonic waveform distortion, det. of nonlinear parameters 1=4337
 acetonitrile-d₃, microwave spectrum 3=6408
 acetonitrile, elec. discharge, CN band system 2=18452
 acetonitrile, elec. discharge, spectrographic study 3=12846
 acetonitrile, i. r. absorpt., temp. depend. 3=8286
 acetonitrile, i. r. absorption bands, width and profile 0=20614
 acetonitrile, microwave electrolysis, dinitrobenzene ion formation 0=17776
 acetonitrile, phase transition between 77-195°K, study by N¹⁴ pure quadrupole resonance, 0=6283
 acetonitrile, Raman spectra temp. dependence 1=9395
 acetonitrile, u.v. O₂ absorption spectra 2=5020
 acetophenone anion radicals, e.s.r. spectra 4=12513
 acetophenone, phosphorescence, stimulated 3=2610
 acetyl chloride, hydrolysis kinetics 0=3307
 acetyl cyanide, r.f. spectrum, structure and dipole moment 0=2763
 acetyl-d, l-alanine, γ-irrad., e.s.r. 2=12815
 acetyl fluoride, r.f. spectrum, structure and dipole moment 0=2762
 acetyl-L-glutamic acid, γ-irrad., e.s.r. 3=3164
 acetyl iodide, reaction with HI 2=19142
 N-acetyl methionine, γ-irrad., e.s.r. of free radicals 2=16550
 acetyl radical, thermodynamic props. 4=25759
 acetylacetonates, sign of electron spin density on methyl protons 0=2743
 acetylacetonates of Zr, Ce, Th, and U; dimorphism and isomorphism 0=3246
 acetylacetone, keto-enol system, proton exchange, study using nucl. mag. multiple resonance 4=13702
 acetylacetone, n.m.r. long-range chemical shifts 1=12309
 1-2-acetylanthracene dissolved in hexane, fluorescence, rel. to second solvent 1=9400
 acetylanthracene, fluorescence rel. to solvents 2=15600
 2-acetylanthracene, fluorescence spectra 2=56
 acetylanthracenes, in solvents, fluorescence spectra 0=10675
 acetylene, absorption and photoionization coeffs., 1050-2000A 4=8616
 acetylene acid, and D-substitution product, electro-optical parameters 3=15366
 acetylene, adsorption on Ir 2=15099
 acetylene-air flame with high-freq. torch, temp. meas. 3=3913
 acetylene-air flames, elec. cond. at microwave frequency 0=1098
 acetylene-air or oxygen flame, electron temp., near to gas temp. 4=16274
 acetylene, catalysis of polymerization and hydrogenation, by ion exchange resins 4=7759

Organic compounds—contd

- acetylene, charge distribution, hybridization and bonding 0=17802
 acetylene, chemi-ionization by O atoms 3=16904
 acetylene, Cl induced polymerization 2=8910
 acetylene, compared with isoelectronic molecule N_2 3=12837
 acetylene cpds., n.m.r. study of H bonds 4=29648
 acetylene, cyclotron resonance in flames 1=20738
 acetylene- d_1 , i.r. spectrum, 1900-3400 cm^{-1} 3=2637
 acetylene decomposition by electron impact, H-D isotope effects 4=25754
 acetylene, decomposition flame, reaction mechanism 3=25827
 acetylene and derivatives, adsorption on alumina and silica 1=11601
 acetylene derivatives containing gp IV elements, i.r. study 4=20075
 acetylene destruction in flames with O_2 4=2153
 acetylene destruction rate in flame gases 4=30897
 acetylene, diamag. anisotropy by n.m.r. 2=13698
 acetylene, dideutero, i.r. spectrum 2=14279
 acetylene, diffusion of ethane and self, meas. 4=11238
 acetylene, dissociation of mol. ions formed by charge exchange with positive ions, mass spectra 4=12523
 acetylene, effect of deuteration on flame band spectra 0=5937
 acetylene, electron density distrib. 2=20849
 acetylene flame; added Na and Sr concentration and temperature calc. 3=3393
 acetylene, flame study, dissociation and ionization processes 3=23542
 acetylene, flame study, reaction zone excitation 3=23543
 acetylene, flames 1=8842
 acetylene, flames, short u.v. emission 2=16535
 acetylene formation in liq. hydrocarbon arcs, rel. to temp. detm. 3=7484
 acetylene, gas-phase vibr. relax. 2=3726
 acetylene, Hg-photosensitized decomp. 4=4708
 acetylene, ion-molecule reacts. 2=8135
 acetylene, ion-molecule reactions 4=12523
 acetylene, ioniz. prod. during oxidation in shock waves 2=23959
 acetylene, ionization by ions and electrons 4=16439
 acetylene, ionization by ions of 200-1200 keV energies 4=27488
 acetylene, ionization, by protons, 2.25 MeV 3=20024
 acetylene, loss of energy of an electron beam traversing gas 0=19764
 acetylene, mag. screening const. calc. 2=23002
 acetylene mol., rot-vib. consts. 3=10531
 acetylene, mol. structure det. from moments of inertia 3=2597
 acetylene, molecular vibration-rotation levels, perturbation by Kr and Xe 0=15726-7
 acetylene molecule, excited states, ASMO calc. 1=14062
 acetylene, n.m.r., nuclear spin state 2=14847
 acetylene- O_2 -argon, free radicals in shock waves, flash absorption spectroscopy 0=17760
 acetylene- O_2 , burning-detonation transition 0=12105
 acetylene- O_2 , detonation, CH formation 1=12677
 acetylene- O_2 , detonation waves 0=12103
 acetylene- O_2 mixture, combustion, effect of shock waves and bubbles 1=4500
 acetylene- O_3 reaction, delayed appearance of OH 4=20830
 acetylene, optico-acoustic effect 0=8715
 acetylene, oxidation, $C_3H_3^+$ ion formation 4=13713
 acetylene-oxygen reactions, induction times 2=4531
 acetylene-oxygen reactions in shock tubes 2=12963
 acetylene, photoionization, continuous absorpt., and fluorescence 4=25690
 acetylene, polymerization and oxidation in shock waves 1=11618
 acetylene, radiation-induced polymerization 0=6418
 acetylene, Raman spectra and mol. collisions 3=7247
 acetylene, reaction with methyl free radicals 0=4710
 acetylene, solid, effect of nuclear spin on neutron scatt. 1=19687
 acetylene solns., i.r. spectra 0=9802
 acetylene, split-p-orbital calc. 2=2009
 acetylene, transport props. meas., rotational relax. 4=5241

Organic compounds—contd

- acetylene-water, deuterium exchange equilib. 4=30894
 acetylene-Xe ionic complexes, by electron irradi. 2=6893
 acetylenes, fluoro-, chloro-, molecular vibr., bond lengths, dipole moment 4=9735
 acetylenes, n.m.r. chemical shifts, 1-butyne to 1-nonyne 1=9953
 acetylenes, substituted, microwave spectra 1=3537
 acids, magnetic anisotropy meas. 4=7212
 acids, u.s. velocity, relationship with latent heat of vaporization 0=16768
 aconitine hydrochloride, hydrobromide, and hydroiodide, unit cell and space group 0=8244
 acoustic properties, liquid-polycrystal transition region 3=21355
 acridine dyes, effect of formic, acetic acids 2=15605
 acridine orange, phosphorescence, anti-Stokes 1=6235
 acridine orange in Plexiglas, fluorescence polarization 1=7723
 acridine yellow, fluorescence decay period 0=3538
 acridine yellow, in gelatine, fluorescence and phosphorescence, pre-excited state 1=2451
 acridine yellow in gelatin, pre-excited, phosphorescence decay 0=13719
 acridine yellow, luminescence, in alcohols, polarization, effect of "initial shock" 4=8215
 acridine yellow and orange, effect of pressure on optical props. 1=20019
 acridine yellow in Plexiglas, fluorescence polarization 1=7723
 acridone solns., absorption and luminescence, rel. to association 3=141
 acriflavine, delayed fluorescence in rigid media 2=2255
 acriflavine, luminescence, in alcohols, polarization, effect of "initial shock" 4=8215
 acriflavine solns., fluorescence lifetimes 4=29636
 acrylic acid NMR, spectra analysis 1=20254
 acrylonitrile, isotopically substituted, n.m.r. spectrum 4=22424
 acrylonitrile and methyl acrylonitrile, γ -irradi. at 77°K, free radicals, e.s.r. 1=14107
 acrylonitrile, n.m.r. unique parameters calc. 4=3910
 acrylonitrile, polymerization, effect of ionising radiations 3=6925
 acyl-phenols, spectra, in cyclohexane and ethanol 4=25691
 adamantane, n.m.r. lines, second moments 1=17352
 adamantane, solid, proton resonance, rotational transitional at -130°C 0=16192
 adenosine-5'-phosphate, crystal structure 3=8871
 adipic acid, absorpt. and luminescence spectra 2=14749
 adsorbed on Ge, effect on carrier recomb. 2=8329, 10466
 adsorption, from soln., onto metal, under potential 2=4499
 adsorption, thermodynamic quantities correl. 2=2432
 agar solution, acoustic impedance in circular tubes 1=11758
 alanine, irradi. single crystals, free radical p-d exchange reaction, e.s.r. study 4=23043
 alanine, irradiation of single crystal 0=3128
 alanine, optical rotation, effect of irradiation by 2 MeV electrons 1=11355
 alanines, e.s.r., 9 kMc/s 2=14821
 alcohol-amine molec. interaction at second triplet level rel. to radical formation 4=10647
 alcohol, benzyl, binary mixtures, ultrasonic velocities 1=8116
 alcohol, boiling from Hg surface 4=24447
 alcohol-glycerol mixtures, ultrasonic studies, conc. depend. 0=10658
 alcohol- H_2O_2 mixtures, u.v.-irradi., free radical formation, e.s.r. study 0=20662
 alcohol, methyl, superheat, measurement 1=15850
 alcohol vapours, ionization potls. meas. 3=7745
 alcohol-water soln., $NdCl_3$, absorption spectra, -87°C 3=1691
 alcohols, adhesion to alkali halide crystals 2=9250
 alcohols, aliphatic, dielec. polariz. 2=5025
 alcohols, aliphatic, dielec. sat. 2=13349
 alcohols, aliphatic, dielectric polarization, relaxation regions 0=19140
 alcohols, aliphatic, long-chain, dielectric const. 0=2171

Organic compounds—contd

- alcohols, aliphatic, OH stretching vibr. band shape, and intramolecular interaction 4=25692
 alcohols, antifoaming action 2=15168
 alcohols, aqueous, nuclear magnetic resonance due to proton exchange 1=8144
 alcohols, aqueous, sound characts. 2=19559
 alcohols and binary solns., sound vel. and compressibility 1=12879
 alcohols, boiling point, effect of strong electric fields 1=10629
 alcohols, C-H bonds, valency vibrations, temp. depend. 2=22986
 alcohols, compressibility and shear viscosity, temp. depend. 3=21309
 alcohols, crystals grown from cooled aqueous solutions 1=20417
 alcohols, dielec. props. 4=21142
 alcohols, dielectric permittivities in 8mm band 4=2700
 alcohols, dielectric relaxation, rel. to viscosity 3=21398
 alcohols, with dissolved alkali metals, property fluctuations, light scatt. study 4=24174
 alcohols and esters, relaxation times 0=19144
 alcohols, fourteen, dielec. absorption meas. 2=17478
 alcohols, H bonding, OH proton reson. shifts 1=14081
 alcohols, H_3O^+ formation, in mass spectra 4=9780
 alcohols, higher, surface tension in H_2O 0=71
 alcohols, hydrogen bonding and dielectric saturation 1=12891
 alcohols, ion formation, negative, by electron beams 4=16438
 alcohols, mixture, microwave dielec. absorpt. 2=19576
 alcohols, n-primary, anomalous dielec. dispersion 0=20960
 alcohols, negative ion mass spectra, sensitivity for I ion formation 0=3740
 alcohols, polyvinyl, containing dyes, luminescence 3=7213
 alcohols, Raman intensities of bonds 2=11375
 alcohols, secondary, solid, H bonding, dielectric effects of flaws 4=25803
 alcohols, and solns., dielec. relaxation 0=19139
 alcohols in solution, n.m.r. study of intermolecular H bonds 1=11113
 alcohols, superheated, (hydrogen bonded), dielectric consts. 4=18213
 alcohols, ten, Raman spectra, depolarization 3=22579
 alcohols, ten, Raman spectra, solvent effects 3=25115
 alcohols, tertiary, intermolec. association, rel. to dielectric polarization 3=21396
 alcohols, twelve, Raman spectra 3=22578
 alcohols, u.s. velocity, relationship with latent heat of vaporization 0=16768
 alcohols, various, molecular polarizabilities 1=4351
 n-alcohols, Rayleigh line-width, orientational relax. times 3=21366
 n-alcohols, thermal cond. meas., -100° + 200°C 4=24204
 n-aldehyde liqs., thermal cond. meas., -100° + 200°C 4=24204
 aldehydes, C-H vibr. rel. to spectral doublet 2=10248
 aldehydes, Raman spectra, relative line intensities 0=85
 aliphatic alcohols in polar solvents hydrogen bond, electrostatic model 4=30449
 aliphatic alcohols, pulse radiolysis, electron solvation 4=29232
 aliphatic aldehydes and ketones, luminescence 1=6908
 aliphatic amines, ultrasound velocity and molec. structure 1=18409
 aliphatic carbonyl cpds, bond dissociation energies 4=25759
 aliphatic hydrocarbons, C-C bonds, magnetic shielding const 4=1253
 aliphatic hydrocarbons, Cl-subst., in benzene and n-heptane, dielec. relaxation 1=4553
 aliphatic liquids, electron diffraction examination 3=21305
 aliphatic liquids, relation btw. ht. cond., molec. wt., and freezing pt. 0=5015
 aliphatic long-chain cpds., dielec. absorption in microwave region 2=12557
 aliphatic, molecular C ions formed in spark source, mass spectrographic study 4=9782
 aliphatic primary alcohol- CS_2 binary system, miscibility gaps 3=23875
 aliphatic, steric effects on reactivity 0=1954

Organic compounds—contd

- alkaloid—manganese chloride complexes, fluorescence 4=13092
 alkane chain, hindered, mean square length 0=17858
 n-alkane mixtures, principle of congruence 0=3518
 n-alkane mixtures, V^F , H^F , G^F dependence on composition 4=24199
 alkanes, diamagnetic susceptibilities 1=9948
 alkanes, formulation of corresponding states principle 1=9379
 alkanes, heats of mixing, congruence, validity 3=23535
 alkanes, kinetics of crystal nucleation 1=5272
 alkanes, liq., γ -ray induced elec. cond. 4=5205
 alkanes, mol. electronic bonding levels calc. 4=20076
 alkanes, molar diamag. susceptibility 1=14074
 alkanes, optical anisotropy, mol., solvent effects 4=18201
 alkanes, photoionization and dissociation 1=7494
 alkanes, reactions with recoil tritium atoms, rel. to C-H bond type 4=7776
 n-alkanes, diffusion in CCl_4 , hydrodyn. interaction 4=166
 n-alkanes, and mixtures, second virial coeffs. 2=11415
 n-alkanes, mobility of ions due to X-rays 2=15612
 n-alkanes, Townsend coeffs., rel. to molecular structure 1=1890
 alkenes, molar diamag. susceptibility 1=14074
 alkenes, straight chain, radicals formed by u.v. irradi., e.s.r. study at 77°K 4=20583
 n-alkenes, molecular length and excitation and ionization calc. 4=28234
 alkyl ammonium salts in solution, n.m.r. unusual spin-spin couplings 3=21410
 alkyl benzenes, fluorescence efficiencies, wavelength depend. 2=19569
 alkyl bromides, Rayleigh line-width, orientational relax. times 3=21366
 alkyl chlorides, dilute solutions, dielectric relaxation 1=12896
 alkyl cyanides, dielec. relax. meas. 4=25693
 alkyl enamels, light-scattering 0=6939
 alkyl free radicals, elimination of molecular hydrogen 1=7916
 alkyl halides, dissociation by momentum transfer, calc. 2=6129
 alkyl halides, microwave dielec. consts. 2=5026
 alkyl halides, (n, γ) activation, failure to bond rupture and nuclear recoil 2=6130
 alkyl halides, and solns., dielec. relaxation 0=19139
 alkyl halides, vapour-phase reactions 4=7742
 alkyl hydroperoxides, photodissociation 0=8314
 alkyl hydroperoxides, pyrolysis kinetics and O-O bond dissociation energies 4=13704
 alkyl iodide vapours, interaction with C surface, desorption and activation energy 0=3304
 alkyl iodide vapours, interaction with red phosphor surfaces, desorption 0=3305
 alkyl iodides, reactions with HI 1=5108
 alkyl nitrites, dielectric properties 1=1753
 alkyl phenols, dielec. absorpt. at 3 cm 4=29642
 alkyl radical reactions, disproportionation mechanism 1=17362
 alkyl radicals, disproportionation mech. 2=23009
 alkyl radicals, transient, e.s.r. 4=3925
 n-alkyl bromides, dielectric relaxation and molecular structure 1=14113
 n-alkyl chlorides, Townsend coeffs., rel. to molecular structure 1=1890
 n-alkyl disulphides, γ -irradi., e.s.r. 2=18480
 alkylbenzenes, crystallization process 4=17782
 alkylbenzenes, u.v. absorpt., oscill. strengths 2=8107
 alkylcyanides in benzene soln., dipole moments and relaxation time 4=12494
 alkylboranes, i.r. spectra 0=7760, 20634
 N-alkyldithiocarbamate complexes with metals, i.r. spectra, normal coordinate analysis 3=25120
 alkynes, molar diamag. susceptibility 1=14074
 allene, diamag. anisotropy by n.m.r. 2=13698
 allene, i.r. spectrum 4=30450
 allene, i.r. spectrum and structure 2=14684
 allene molecule, shrinkage effect by thermal vibrations 2=6124
 allene, Raman and i.r., integrated intensities and polarizations 4=6609
 allene, Urey-Bradley force field 3=20004
 allokinic acid, structure 0=3253

Organic compounds—contd

- allyl cation, radical, anion, wave functions of excited states 4=6610
 allyl ions, Hartree-Fock calcs., unrestricted, spin props., computation by improved method 4=28174
 allyl radical, MO calcs., partial overlapping 2=6217
 allylic chlorides, isomerism, rot., from i. r. spectra 4=28235
 alpechin (olive juice), microscopic and electron diffraction studies 1=9177-8
 aluminium naphthenate gel, elastic relaxation and deformation 1=12579
 amides, long-range proton interactions 2=16560
 amides, secondary and tertiary, N.M.R. 1=12308
 amido cpds., N^{14} quadrupole spectra, coupling and asymmetry const. 0=21087
 amine-chloranil complexes, absorption spectra 3=1694
 amines, absorpt. on Ge, effect on surface charge 4=20364
 amines, adsorpt. on Ge, effects 4=20399
 amines, aliphatic, in active N flames, emission spectra 1=13942-3
 amines, aliphatic, in organic soln., Kerr effect 2=17656
 amines, intra-molecular flexibility and rotation 0=7735
 amines, refractive index at 6 mm, press. depend 0=14697
 amino acid prep. by N fixation by u.s. waves 1=20759
 amino acids, complex formation with O_2 2=6881
 amino acids, effect of molec. wt on luminescence 0=20995
 amino acids, γ -irradiated, e.s.r. spectra, temp. depend. 3=20019
 amino-acids, interaction with riboflavin 3=8954
 amino acids, microwave saturation in radiation-induced free radicals 2=4239
 amino acids, and protein paramagnetic resonance and semiconductor theory 1=1115
 amino acids, protolysis kinetics 2=17083
 amino acids, semiconductivity 1=7654
 2-amino azulene, crystal structure 0=21203
 amino cpds., N^{14} quadrupole spectra, coupling and asymmetry const. 0=21087
 4-amino phthalimide, molecular excited dipole moment μ 's 4=15321
 p-amino-acetophenone, Raman and i. r. spectra 2=7219
 2-aminoacridine, fluorescence yield 1=12887
 1-aminoanthraquinone derivatives, radiationless transitions, potential barrier 4=1284
 3-aminophthalimide, with chlorophyll impurity, optical props. 2=22944
 3-aminophthalimide, fluorescence spectra 2=56
 3-aminophthalimide, luminescence, active and nonactive absorption separation 3=18822
 4-aminophthalimide in polymethylmethacrylate, luminescence 4=22937
 p-amino-salicylic acid, tritium labelling by micro-waves 0=15527
 aminotroponimine chelates of Ni, nuclear and spin resonance 0=15762
 amyl acetate flames, temp. distrib. 0=1059
 amyl benzoate, dielec. dispersion, at 1000, 2000 and 9200 Mc/s 1=1748
 n-amyl acetate, viscoelectric effect 3=18808
 n-amyl alcohol, scattering of neutrons 0=12940
 n-amyl disulphide, γ -irrad., ionic paramag. species prod., e.s.r. and pot. bleaching studies 4=20319
 n-amylamine, dipole moment and mol. polariz. 3=2638
 aniline, C^{13} nuclear magnetic resonance 3=10544
 aniline-cyclohexane mixtures, u.s. propagation 0=19131
 aniline, electron structure cal. c., MO approx. 2=10275
 aniline hydrobromide, optical props. 1=19942
 aniline hydrobromide, orthorhombic, domain structure 2=19063
 aniline hydrobromide, twinning structure 3=3259
 aniline hydrobromide, u.v. pleochroism 3=4965
 aniline hydroiodide, u.v. pleochroism 3=4965
 aniline, luminescence 2=6629
 aniline, multiple proton mag. resonance relaxation 1=15910
 aniline, photoionization, electron energy distrib. 1=16263
 aniline, photoionization, electron energy distrib. 1=18763
 aniline, pi-orbital charge distribution, valence-bond theory 4=6611
 aniline-cyclohexane crit. system, u.s. light diff. 2=2939
 aniline-cyclohexane mixtures, critical opalescence 2=17450

Organic compounds—contd

- aniline-cyclohexane soln., u. s. wave, light diff. 2=15592
 aniline, photodissociation 1=6053
 anilines, band intensity and structural factors 0=7750
 anilines, dilute solutions, dielectric relaxation 1=12895
 anilines, o-substit., first-overtone NH band splitting 4=15362
 anilines, para-substituted, C-N stretching freqs. 3=2639
 anilinium salt soln. ion pair structure, from n. m. r. 4=2714
 anils, thermochromy, time constants 3=20979
 anils, transient species in photolysis 4=15847
 anisal-para-amino-azobenzol, investigation using ruby laser 4=2841
 anisaldazine, liquid crystal, dielec. const. 3=11803
 o-, m-, and p- anisidines, dipole moments in solvents and in vapour state 4=12495
 anthracene, α irrad., scintillation light yield 1=5057
 anthracene, α part. penetration depth 4=25981
 anthracene, α -particle scintillation 3=18045
 anthracene, α -particle scintillation anisotropy, low-temp. 2=727
 anthracene, α -scintillation response, directional depend. 0=1754
 anthracene, anomalous light waves in exciton-absorption region 0=6176
 anthracene and anthracene- d_{10} , i. r. spectra in polarized light 2=6164
 anthracene, anthracene- d_{10} , molecular vibrs., in plane, calc. 3=22580
 anthracene, band structure and hole transport 1=17451
 anthracene, band structure, transport of electrons and holes 2=8186
 anthracene, band theory, anomalous Hall effect predicted 4=6993
 anthracene-benzene soln., cathodoluminescence, rise-time charac. 1=2765
 anthracene, C-H bond, planar bending, anomalous, -180 to 20°C 3=22577
 anthracene, charge carrier mobility and production 4=22528
 anthracene, charge carrier prod. and mobility 0=13620
 anthracene, charge injection, effect of electrodes 2=14579
 anthracene coal, mag. susceptibility 3=11023
 anthracene, conduction rel. to hole injection theory 2=14521
 anthracene, crystal growth 2=4386
 anthracene, crystal structure and thermal expansion, 95° and 290°K 4=23501
 anthracene crystals, anomalous dispersion 0=4403
 anthracene crystals, electroluminescence 3=18051
 anthracene crystals, energy migration bet. impurity mols. 3=2691
 anthracene crystals, luminescence 3=20533
 anthracene crystals, luminescence decay times 2=18869
 anthracene crystals, photocurrents, ruby-laser excited 4=20433
 anthracene crystals, thermally stimulated currents and carrier trapping 4=20437
 anthracene + cyclohexane solns., irradiation 0=3322
 anthracene, dark currents, temp. depend. 3=15584
 anthracene, Davydov splitting, polariz. ratio 2=694
 anthracene, decay of triplet state in fluid media 2=1159
 anthracene, defect electron mobility meas. 2=8353
 anthracene derivative vapours, absorption and fluorescence spectra intensity and shape rel. to temp. 4=6607
 anthracene derivatives, crystal structures 0=4658
 anthracene derivatives, spectra and fluoresc., effect of isopentane 4=6608
 anthracene and derivs. absorpt., luminescence spectra 2=18823
 anthracene and derivs., radiationless conversion in solns. 2=15610
 anthracene and derivs., vapours., absorpt. and fluoresc. 2=21947
 anthracene, dielectric polarization calc. from mol. elec. struct. 4=22770
 anthracene, diffuse electron-diffraction spots 1=6521
 anthracene, dil. solutions, Kramers-Kronig relation 3=16627
 anthracene doped with anthraquinone, anthrone or naphthacene, photocarrier trapping 4=15448

Organic compounds—contd

anthracene, double refraction, absorpt. coeffs. 2=6546
 anthracene, e.s.r., Bloch eqns. 3=6744
 anthracene, effect of 60 kV electrons on crystals 1=2400
 anthracene, effect of thickness on absorption curves at 20°K 0=4409
 anthracene, elec. cond., anisotropy 4=28579
 anthracene, elec. cond., electrode effect 2=8295
 anthracene, elec. cond., of films 2=6424
 anthracene, elec. cond., impurity effect 4=26064
 anthracene, elec. cond., space-charge-limited 2=2130
 anthracene, with electrolyte contact, photoelectrolysis 3=23549
 anthracene, electron and hole mobility 4=22529
 anthracene, electron transport tunnelling model 2=14510
 anthracene, evap. films, semicond. and cryst. props. 2=2441
 anthracene, excess defect electrons, density of states 3=4844
 anthracene, excess electron and hole band structures 4=1430
 anthracene, exciton—exciton interaction, photoconductivity 4=15572
 anthracene, exciton—exciton interactions and photoconductivity 3=8568
 anthracene, exciton production 0=9999
 anthracene, exciton transfer, continuity eqn. 1=17473
 anthracene films, secondary electron emission, and inelastic scattering 0=15058
 anthracene films, structure, spectra, absorpt. and luminescence 4=10610
 anthracene, fluoresc. by α -rays, polarization 4=20503
 anthracene, fluorescence 2=11483
 anthracene, fluorescence, double photon excitation 3=18040
 anthracene, fluorescence, excited by ruby giant-pulse laser 4=7199
 anthracene, fluorescence response to heavy ions 1=8404
 anthracene, fluorescence and scintillation decay times 2=8582
 anthracene, fluorescence of vapour 1=181
 anthracene, fluorescence of vapour at 2652 Å, benzene—sensitization 1=6909
 anthracene, fluorescent singlet—triplet absorption, indirect obs. 4=4313
 anthracene, free-carrier generation via exciton—exciton interactions 3=10887
 anthracene, hole and electron drift mobilities 0=15997
 anthracene, in hydrated derivs. absorption and luminescence spectra 2=18835
 anthracene impurities in 9, 10-dihydroanthracene, luminescence at 20°K 1=20020
 anthracene, ionization potential and mass spectra 0=3738
 anthracene, light transmission, exciton absorption region 0=13678
 anthracene, light yield rotation under α -rays 4=13094
 anthracene in liquid soln., obs. of triplet—triplet absorpt. spectra 4=2842
 anthracene, luminescence 3=6628
 anthracene, luminescence and absorption at 4°K, rel. to purity 1=14644
 anthracene, luminescence decay law 3=8626
 anthracene, luminescence, delayed, and radiationless transition meas. 4=15621
 anthracene, luminescence, effect of tritium β -rays 4=28751
 anthracene, luminescence excited by α , p, e, decay law 3=11005
 anthracene, luminescence, laser-induced, intensity var. 4=15620
 anthracene, luminescence, low. temp., mechanisms 4=7200
 anthracene, luminescence and photocond. 2=14744
 anthracene, luminescence polarization, under β -ray excitation 1=20025
 anthracene, luminescence quenching in Plexiglas 1=14645
 anthracene, luminescence reabsorption 1=11399
 anthracene, luminescence of solid solns. 2=14743
 anthracene, luminescence, temp. effects 4=17611
 anthracene, luminescence, two-photon, laser excitation 3=11002
 anthracene, mixed with light gas, intermolec. interact. rel. to temp. 2=16567
 anthracene, molec. vibrs., in solns. and crysts. 2=14374

Organic compounds — contd

anthracene, molecular excitation temp. and vibr. specific heat calc. 4=12493
 anthracene, monocrystal growing technique 0=12008
 anthracene, with naphthalene, photoluminescence rel. to β -radiation 2=16864
 anthracene, near u.s. absorption spectra 2=8525
 anthracene, negative ion soln., e.s.r. 3=6744
 anthracene, neutron irradi., positron annihilation 2=9827
 anthracene, 9, 10 dihalogen, i.r. spectra 4=15363
 anthracene, nuclear quadrupole resonance in solid solution 1=20277
 anthracene, in octahydroanthracene, absorption and luminescence spectra 2=18838
 anthracene, optical consts, meas. and calc. 0=4263
 anthracene, pairing theorem, e.s.r. study, C¹³ splitting in positive and negative ions 4=22385
 anthracene, particle discrimination rel. to temp. and energy 4=5887
 anthracene, persistent internal polarization, theory 2=4089
 anthracene in Perspex, luminescence depolarization 1=15888
 anthracene, phenazine and acridine doped, quantum luminescence yield 4=4312
 anthracene, photo and radioluminescence 2=6628
 anthracene, photocond. 2=8428
 anthracene, photocond., carrier density 2=23449
 anthracene, photocond., exciton—exciton interaction 2=14580
 anthracene, photocond., gases effect 2=6494
 anthracene, photocond. and luminescence, wavelength depend. 1=6175
 anthracene, photocond. and spectral absorpt. 3=2970
 anthracene, photocond., voltage, illumination and electrode separation depend. 0=18065
 anthracene, photoconducting, carrier generation 4=22530
 anthracene, photoconducting, carrier trapping 4=22531
 anthracene, photoconductivity 4=7078
 anthracene, photoconductivity, exciton processes 4=1439
 anthracene, photoconductivity, generation of free carriers 1=2424
 anthracene, photoconductivity, hole-injection energy—balance 0=10000
 anthracene, photoconductivity, positive hole injection 0=4371
 anthracene, photoconductivity, and trap energy distrib. 4=1690
 anthracene, photoconductivity, X-ray and u.v. 3=6628
 anthracene, photocurrents, space-charge-limited 2=14578
 anthracene, photodepolarization, nonlinear 3=20399
 anthracene, photodepolarization, polarity, in fundamental absorpt. band 3=17908
 anthracene, photoelectricity, laser induced, carrier release mechanism 4=7077
 anthracene, photoelectricity, var. wavelength, and traps 4=15571
 anthracene, photogeneration of carriers, single exciton process 4=15463
 anthracene, photo polarization, two decay components, ohmic and non-ohmic 4=7076
 anthracene, photovoltaic effect, in modulated light, temp. depend. 1=2423
 anthracene, piezoelectric effect 0=11747
 anthracene, in polyphenyls, absorption and luminescence 2=6567
 anthracene in polystyrene, concentration-depolarization of fluorescence 0=4423
 anthracene-polystyrene solid solutions, fluorescence 0=20998
 anthracene, positron annihilation in, disorder effects 1=17524
 anthracene, positron lifetime in, near melting pt. 0=5549
 anthracene, radiation damage of scintillation props. 2=6636
 anthracene, radiationless transitions between states of different multiplicity 1=6058
 anthracene, reabsorption of light rel. to photocond. 2=6491
 anthracene, reaction with styrene during polymerization 0=8316-17
 anthracene, red-excited fluorescence, rel. to parity and temp. 4=28750
 anthracene, refractive index, thickness depend. 2=18794

Organic compounds—contd

- anthracene, scintill. by energetic α -rays, deuterons and electrons at low temps. 4=26254
 anthracene, scintill. light yield under deuterons and α -rays 4=26255
 anthracene, scintillation anisotropy at low temps. 2=18879
 anthracene, scintillation kinetics 2=13703
 anthracene, scintillation light yield for α and β -rays 4=13093
 anthracene, scintillation pulse shape 2=6637
 anthracene, scintillation pulses, temp. dependence 1=17918
 anthracene, scintillation response to β -rays 1=20021
 anthracene, scintillation response, to positrons and electrons 0=8023
 anthracene, self-diffusion, 150-190°C, C^{14} tracer study 0=17977
 anthracene, semiconducting props. 2=23304
 anthracene, semiconducting props., review 4=10610
 anthracene, semiconducting props. review 4=28578
 anthracene, semiconductivity, surface, H_2O vapour effects 4=12921
 anthracene, sensitized photoconductivity 3=13129
 anthracene, shock excitation, CN, C_2 and CH spectra 1=2310
 anthracene, simultaneous X-ray diffraction 4=7652
 anthracene, sol. in CCl_4 , molecular rotation 3=13143
 anthracene, soln., fluorescence displacement 2=7221
 anthracene, soln. in solid pentane, luminescence spectra 1=17917
 anthracene, solutions, delayed fluorescence 3=142
 anthracene solutions, fluorescence, effect of u.v. and β -irrad. 1=18419
 anthracene, solutions, spectra, changes on addition of ferric acetylacetonate 3=15359
 anthracene, space charge det. for excess hole current 2=16715
 anthracene, structural absorption and fluorescence 4=30452
 anthracene, structure at low temperatures 0=18337
 anthracene, surface impurities, effect on photocond. 2=4059
 anthracene-sym-trinitrobenzene complex luminescence 0=4434
 anthracene, temp. and elec. field effect on free carrier photo-generation 4=22809
 anthracene-tetracene, energy transfer rel. to temp. 2=4182
 anthracene-tetracene, fluorescence, temp. depend. 1=6231
 anthracene, thermal vibration ellipsoids, ambiguous interpretation 1=19697
 anthracene, thermoluminescence, adsorbed and trapping 4=20497
 anthracene thin layers, elec. cond., photocond., impurities effect 4=30630
 anthracene, thin layers, elec. and photoconductivity 1=17631
 anthracene, 3800 Å band system, crystal splitting 1=19639
 anthracene, transparency, thickness depend., spectral distrib. 2=18809
 anthracene, trapping centres, conductivity glow-curve study 1=2422
 anthracene, triplet excitons and delayed fluorescence 3=18041
 anthracene, triplet state, first-order decay, viscosity depend. 4=3884
 anthracene, vapour, photoluminescence, conc. and temp. depend. 4=243
 anthracene vapour, triplet state decay 4=22409
 anthracene whiskers, growth 4=7568
 anthracene-trinitrobenzene complex crystals, evidence for localized excitons 4=28749
 anthracene, X-ray diffr. patterns 3=20859-60
 anthracene, X-ray temp. diffuse, scatt. 2=17009
 anthracene, X-ray temp. diffuse scattering 1=9969
 anthracenes, substituted, electronic spectra, 1L_b transition 1=19640
 9-anthraldehyde, crystal structure 0=4658
 anthraquinone halogen derivatives in frozen solns., luminescence 4=1786
 anthraquinones, substituted, crystal structure 3=23462
 β -anthrol, electronic spectrum, 1L_b transition 1=19640
 anthrols, electronic spectra and H bonding 3=8287
 anthrone, crystal structure, 2-dimens. Fourier synthesis 0=18366

Organic compounds—contd

- anthrone, statistical structure 1=9143
 arabinose, X-irrad., paramag. centre prodn. and decay 2=12823
 araldite, photoelasticity under dynamic loads 1=3821
 aromatic acids, photochemistry, u. v. attack, eosin sensitized 4=7770
 aromatic aldehydes, luminescence 3=961
 aromatic anion lifetimes in aliphatic alcohols pulse radiolysis study 4=30908
 aromatic anion radicals, nitrosubstituted, e.s.r., hyperfine splittings 3=22593
 aromatic, aq. solns., luminescence due to X-rays 2=7222
 aromatic boro-organic, use as nuclear reactor poisons 4=22267
 aromatic- CCl_4 complex formation 3=25814
 aromatic C, N-ring systems, bond angle calc., agreement with expt. 4=6541
 17 aromatic cpds, dipole moments, rel. to molec. structure 4=18212
 aromatic cpds. in nonpolar solns., electronic spectral shifts 4=2688
 aromatic compounds, Raman spectra, intensities and depolarization degrees rel. to metallic molec. model 4=6612
 aromatic, condensed-ring, absorption spectra, effect of high pressure and low temp. 0=15733
 aromatic crystal excitons, triplet band calc. 4=6805
 aromatic, crystal triplet-triplet annihilation mechanism 4=9880
 aromatic crystals, electronic absorption spectra, theor. and exper. study 1=1155
 aromatic crystals, energy transfer from triplet state, review 4=17391
 aromatic, electron spin density on methyl protons, sign 0=2743
 aromatic free-radical solutions, nuclear-electron spin relax. and Overhauser polarization 3=23909
 aromatic, free radicals, electronic relaxation 3=14183
 aromatic, free radicals, paramag. excitons 2=14413
 aromatic free radicals, unpaired-electron coupling with nuclear motion 3=8309
 aromatic, fused-ring, ionization potential calc. 0=3738
 aromatic halide scintillator solns., quenching 3=1699
 aromatic and heterocyclic compounds, intermolecular π effect 1=11118
 aromatic hydrocarbon crystals, luminescence, var. with doping 4=1787
 aromatic hydrocarbon ions, free-electron model and doublet splitting 4=28236
 aromatic hydrocarbon positive ions in solids, semiconduction 1=19866
 aromatic hydrocarbons, capacitative energy and ionization 1=5424
 aromatic hydrocarbons, complexes with iodine 0=11545
 aromatic hydrocarbons and other cpds., scintillation yield under Sr^{90} radiation 1=1746
 aromatic hydrocarbons dissolved in plastics, luminescence 3=7213
 aromatic hydrocarbons, elec. conduction 0=6071
 aromatic hydrocarbons, fluorescence decay time 2=6631
 aromatic hydrocarbons, liq. scintillators, quantum yield 2=13347
 aromatic hydrocarbons, phosphorescence spectra and decay times 0=662
 aromatic hydrocarbons, π -electron energy calc. 4=20025
 aromatic hydrocarbons, polycyclic, elec. cond., impurity effect 4=26064
 aromatic hydrocarbons, polynuclear, with condensed benzene rings, fluorescence line spectra 1=3860
 aromatic hydrocarbons, Raman molecular spectra, effect of adsorption 3=8932
 aromatic ketones, luminescence 3=961
 aromatic, large conjugated, in host matrix, Raman, i. r. and u. v. spectra 4=17547
 aromatic, for lasers 4=27703
 aromatic liquids, with methoxy groups, dielec. props., 2.2 mm. 20-80°C 3=21389
 aromatic liquids, mol. alignment, electron diffr. exam. 4=2649

Organic compounds — contd

aromatic liquids, relation btw. heat conductivity, molecular weight and freezing pt. 0=5015
 aromatic molec. crystals, charge resonance states, location 4=28407
 aromatic, molecular C ions formed in spark source, mass spectrographic study 4=9782
 aromatic molecules, deactivation rel. to phosphorescence 3=11789
 aromatic molecules, excited state, proton dissociation 1=827
 aromatic molecules, mag. susceptibility 1=3558
 aromatic molecules, phosphorescence, stimulated 3=2610
 aromatic molecules, substitution reactions, pi localization energies, LCAO—MO—SCF approx. 4=12430
 aromatic, proton resonance, effects of electron delocalization 1=2351
 aromatic ring cpds., F^{19} n.m.r. 1=11127
 aromatic, solid-state ionization potential 1=10676
 aromatic mols., dipole moments det. 3=2605
 aromatic mols., ring currents, quantum calc. 2=14297
 aromatic mols., inductive resonance energy transfer, triplet to singlet levels 4=1283
 aromatic mols., in triplet state, e.s.r. line shape, $\Delta m = 2$ transition 3=25135
 aromatic, n.q.r. of Cl^{35} , effect of elec. field due to nitro-, amino- substituted 4=20105
 aromatic nitro-cpds., freq. depend. of Raman intensity outside absorpt. band 4=21135
 aromatic nonionic crystals, photoconductivity and inter-molec. interaction 4=22810
 aromatic, polar, in organic solvents, dielec. props at 1000-10000 Mc/s 0=5021
 aromatic, polycyclic, luminescence, two-photon, laser excitation 3=11002
 aromatic radicals, hyperfine interactions, theory 0=15680
 aromatic, Raman spectra 0=9817
 aromatic, reactions with CS_2^+ , products obs. 2=8912
 aromatic, resonance energies from Pauling bond orders 4=6544
 aromatic, ring current effects, MO calc. 2=16539
 aromatic, triplet-state, zero-field splittings 4=3885
 aromatics in boric acid glass, free radicals, e.s.r. 4=13742
 aromatics, fluorescence self-quenching in vapours 1=15962
 aromatics, irradiated, e.s.r. 3=15372
 aromatics in solution, fluorescence decay 1=12888
 aromatics in solution, fluorescence decay 1=15889
 aromatics, tritium-labelled, distribution of radioactive atoms 1=15206
 aromatics, vapour, adsorption on water surface 4=29616
 aryl boron cpds, spectra, intramolecular charge-transfer bands 1=19641
 aryl derivatives of oxadiazole in polystyrene, luminescence and absorption spectra 0=10073
 arylsulphenyl radicals, e.s.r., g-value anisotropy 3=25137
 di-aspartic acid, X-irrad. damage e.s.r. study 2=14482
 asphalt deuterated solutions, n.m.r., surface proton 4=5213
 asphalt, solns., Overhauser effect 0=3545
 asphalt solns., paramag. reson. 2=2734
 asphaltene, solns., electron-proton double resonance 3=7221
 associated liquids, dielec. and mechanical relaxation 3=21390
 associated solutions, dielectric constants and heats of mixing 4=8217
 atomic polarization, temp. depend. of vibr. polarization 2=8073
 auramine, phosphorescence, anti-Stokes 1=6235
 automatic zone refiner 3=8809
 azine-quinone complexes, i.r. spectra 4=28242
 azines, emission spectra, T-S polariz. 2=14265
 azines, molecular excitation, ground by triplet perturbation 4=12496
 azines, monocyclic, $n \rightarrow \pi^*$ transitions 2=16503
 azobenzene crystals, absorpt. spectra, polariz. 2=18816
 azobenzene, freezing nucleus, by u.s. velo. anomalous increase 3=18251
 azobenzene liquid state, u.s. velocity and compressibility 1=18406
 azobenzene, π -electronic u.v. spectra 3=25133
 azo benzene, u.s. velocity rel. to molecular parameters 1=18403

Organic compounds — contd

azobenzenes, dielectric props. 1=12892
 azoethane, flash photolysis 2=19156
 azoxyanisole, Raman spectra, investigation using ruby laser 4=2841
 p-azoxyanisole, dielec. loss, 0.9-24 kMc/s 2=17477
 p-azoxyanisole, liquid, anisotropic dielec. loss 4=196
 p-azoxyanisole, liquid crystal, with and without phenanthrene, near freezing 4=11181
 p-azoxyanisole, liquid crystals, domains in 3000 V/cm electric field 4=2653
 pp'-azoxyanisole, liquid crystals, degree of order 2=49
 p-azoxyanisole, liquid crystals, structure rel. to u.s. waves 3=18798
 azoxyanisole, nematic phase, flexional-elasticity 1=14847
 azoxybenzene liquid state, u.s. velocity and compressibility 1=18406
 azoxybenzene, π -electronic u.v. spectra 3=25133
 azoxy benzene, u.s. velocity rel. to molecular parameters 1=18403
 azoxybenzenes, dielectric props. 1=12892
 p-azoxybenzoate, liquid crystal, smectic, drop and rod growth 3=21313
 p-azoxyphenetol, liquid crystals, structure rel. to u.s. waves 3=18798
 azoxyphenol-di-p-n-amy ether, proton mag. resonance 1=5076
 azulene, absorption spectra, separation of overlapping transitions 1=11763
 azulene anion, anomalous effects in e.p.r. spectra 4=25724
 azulene anion, e.s.r. spectrum, erratum 3=8310
 azulene anion free radicals e.s.r. 2=23006
 azulene anion radicals, e.s.r. 2=23007
 azulene in frozen cryst. solns., fluorescence and absorpt. spectra 4=10229
 azulene molecule, lowest triplet level location 2=22984
 azulene, pi electron localization energies, ZDO calc. 4=12430
 azulene, spectral solvent shifts 0=16707
 azulene, spectral solvent shifts 2=21910
 BDPA radical, mag. exchange-lattice relax. theory 2=549
 Bakelite epoxide, photoelastic props. 2=2662
 barbituric acids, free radical stabilization 1=9173
 barium ethyl sulphate, rotativity 1=12880
 benzaniline, π -electronic u.v. spectra 3=25133
 benzaldehyde- α -t, oxidation 0=1953
 benzaldehyde anion radicals, e.s.r. spectra 4=12513
 benzaldehyde, phosphorescence quenching by naphthalenes 0=944
 benzaldehyde, phosphorescence, stimulated 3=2610
 benzaldehydes, ortho-substituted, n.m.r. 2=20873
 1,2-benzanthracene crystals, anomalous dispersion 0=4403
 1,2-benzanthracene derivs., "excimer" fluorescence 3=21383
 1:2-benzanthracene and methyl derivs., excimer fluoresc. 2=11376
 1,2-benzanthracene, n.m.r., high-resolution 3=17614
 p-benzasemiquinone ion, e.s.r., C^{13} h.f.s. 2=3776
 benzene, absorption on graphitized carbon blacks 2=10944-5
 benzene, absorption at 20°K, exciton doublet 4=7098
 benzene, absorption spectra, 4°K, H-like levels 4=1758
 benzene, adsorbed on chars, n.m.r., enhancement due to e.s.r. irradiation 4=1308
 benzene, adsorbed, electronic spectrum data 2=15100
 benzene, adsorbed on graphite, specific heat calc. 4=2132
 benzene, adsorbed on graphite, thermodynamic functions, calc. 3=18398
 benzene, adsorbed on Vycor glass, freezing 0=12118
 benzene, adsorption on carbon, enhancement of nuclear polarization 0=16717
 benzene, adsorption on charact. silicas 3=1382
 benzene-AgClO₄ complex, mol. motion, n.m.r. 4=1901
 benzene-air mixtures, detonation wave pressure 0=10351
 benzene and alkyl derivs., fluorescence quenching by diacetyl in hexane soln., 28°C 4=14174
 benzene, aqueous, as gamma-dosimeter 2=5533
 benzene, aqueous, pulse radiolysis 2=15161
 benzene, $^3B_{1u}$ state, radiationless transitions and radiative lifetime 2=20845
 benzene, C^{13} n.m.r. 3=22601
 benzene, C—C mean vibration amplitudes 0=5909

Organic compounds—contd

- benzene-CCl₄ solns., refractive index 0=10667
 benzene, and C₆D₆, solutions in cyclohexane, luminescence at 77°K 0=11774
 benzene and C₆D₆ u.v. absorption spectra 0=7800
 benzene, Cherenkov radiation by γ rays 3=2239
 benzene-chloroform-hexanol-1 mixtures, dielec. saturation 3=23895
 benzene, compressibility, temp. depend., X-ray study 3=21322
 benzene, conductivity induced by electron injection 1=12899
 benzene, conductivity induced by injected electrons 2=9288
 benzene, cryometry 0=3676
 benzene, cryst., low-temp. luminescence 3=11003
 benzene, crystal epitaxial growth and surface texture 4=26612
 benzene, crystal fields 0=2939
 benzene, crystalline, absolute i.r. intensities 2=23576
 benzene, crystalline, exciton-phonon interaction 3=10586
 benzene, crystalline, films, i.r. spectrum 3=13191
 benzene, crystalline, i.r. spectrum 0=8003
 benzene, crystalline, triplet exciton interactions 3=25492
 benzene crystals, luminesc. at 20.4° and 4.2°K 4=28752
 benzene crystals, phase-changes, first-order, study using positron annihilation 4=23300
 benzene crystals at -209°C, Raman spectra, bonding effect 4=30691
 benzene, Debye approx. 3=15440
 benzene, density, near critical point 3=21323
 benzene, and derivatives, dissociation, in glow discharges 0=485
 benzene and derivatives, free radicals prod. by irradiation 3=2670
 benzene derivatives, halogenated disubstituted, dipole moments and relaxation times 0=15780
 benzene derivatives, i.r. absorption 50-350μ 0=6927
 benzene derivatives, luminescence 3=21380
 benzene and derivatives, phosphorescent, e.s.r. 3=21417
 benzene derivs., i.r. absorption and H-bonding 4=30454
 benzene derivs., p.m.r. meas. in nematic solvents 4=18180
 benzene, derivs., photoionization rel. to photon energy 2=156, 9528
 benzene and deuterated benzene, crystal absorption spectra at 20°K 2=695
 benzene, deuterated, specific heat 2=13324
 benzene-deutero benzene mixed crystals, i.r. absorption spectra 3=23081
 benzene, diamag. anisotropy by n.m.r. 2=13698
 benzene diazonium salts, 11 substituted, crystal struct., atomic 4=23503
 benzene, dielec. const. near 9000 Mc/s 2=21916
 benzene, dielec. constant, rel. to purity 2=17769, 17771
 benzene, ³F_{4u}-¹A_{1g} intercombination, lifetime and oscillator strength 1=14052
 benzene, elec. cond., rel. to moisture content 1=18421
 benzene electrolytic conductivity, conditions for obeying Ohm's law 4=27192
 benzene, electronic spin-spin interaction, correction 3=8290
 benzene, electrostriction 0=934
 benzene, energy of multiple states 4=3889
 benzene, excited state vibrational energy transfer in collisions 4=3898
 benzene, fast electron diffraction, energy analyser 0=9090
 benzene, flame-front propag. and compression waves in air 0=14895
 benzene, fluctuational formations, temp. depend. 4=24169
 benzene, fluorescence 2=11483
 benzene, forbidden molecular transitions 1=14065
 benzene, forbidden spectral bands, effect of mol. vibr. 2=12341
 benzene, γ-irrad., induced optical activity dis-counted 1=1007
 benzene, γ-irradiation change 0=6416
 benzene, gas ionization by electrons 2=15883
 benzene, gaseous, ultrasonic relaxation 1=8162
 benzene, glow discharge 0=9017
 benzene, glow discharge, chemical reactions 0=10891
 benzene-H₂O-Hg system, contact angles, interfacial tensions 4=144
 benzene halides, melting, excess free energy 0=19502

Organic compounds—contd

- benzene halogen derivs., positronium annihilation 2=3324
 δ-benzene hexachloride, bond angles, nucl. quadrupole resonance study 3=8872
 benzene-I complex, enhanced i.r. intensity 2=6165
 benzene, i.r. absorption bands, width and profile 0=20614
 benzene, i.r. absorption, pressure influence 3=25116
 benzene, i.r. dispersion and absorption 0=5028
 benzene, i.r. reflection spectra 1=4343
 benzene, i.r. spectrum of crystal 2=4149
 benzene, internal conversion, upper electronic—first excited singlet states 4=1286
 benzene-iodine complex, charge-transfer forces 0=20685
 benzene-iodine complex, geometrical structure 0=15779
 benzene, ionization potential and mass spectra 0=3738
 benzene, ionization potentials from Rydberg series observations 1=7478
 benzene-iso-octane mixtures, vapour-liquid equilibrium 0=6781
 benzene, isotopically substituted, zero-point energy 3=12794
 benzene, lifetime of first excited ¹B_{2u} state 1=17330
 benzene, light scatt., Rayleigh factor 1=6966
 benzene, light scattering const. 3=7208
 benzene, liquid, atomic structure 2=15564
 benzene, liquid, elec. cond. 2=21922
 benzene, liquid, i.r. reflection spectrum 0=12426
 benzene, liquid order study 2=9257
 benzene, light scatt., absolute intensity, exper. determ. 4=24211
 benzene, light scatt., orientational interaction and rotation of molecules 4=24162
 benzene, lower electronic states 4=3888
 benzene, mag. susceptibility calc. 1=19657
 benzene, mechanical analogue to determine absorption maximum 0=5901
 benzene-methanol solns., refractive index 0=10668
 benzene-methanol-toluene system, u.s. velocity 4=14160
 benzene-methyl alcohol and benzene-dioxane mixtures, Rayleigh consts., by light scattering 3=5442
 benzene-methyl alcohol, light scattering 2=21909
 benzene-methyl alcohol, u.s. velocity 2=15584
 benzene and methylcyclohexane, low-temp. soln. spectra 2=14674
 benzene, molecular convex-core model 1=14142
 benzene, molecular structure by electron diffraction 0=10791
 benzene, molecular wt. determination 1=10288
 benzene molecule, π-electron system 0=9302
 benzene, molecule study by electron diffraction 0=15782
 benzene molecules, gaseous state, charge exchange from Rb atom 4=14580
 benzene, and mono- and divalent ions, electronic spectra, correlations 0=20648
 benzene monohalides, emission spectra in glow discharge 2=7257
 benzene, monotrinitated, dissociation 0=8322
 benzene, multi-centre π-electron integrals 3=12847
 benzene, multiple proton mag. resonance relaxation 1=15910
 benzene, n.m.r., p₁ in paramag. C, diffusion effects 3=21406
 benzene, n.m.r., proton chemical shifts 1=8140
 benzene, near-u.v. absorpt. spectrum, 690°-1900°K 4=3887
 benzene, near u.v. absorption spectra below -259°C 2=8525
 benzene, neutron inelastic scattering investigation, 20°C 4=5153
 benzene, neutron scatt., slow, per proton, ang. distrib. 4=9755
 benzene, neutron total cross-section of H, meas. 4=28238
 benzene and nitrobenzene, halogenated, nuc. Br⁷⁹, I¹²⁷ quadrupole res. 4=1312
 benzene, nuclear spin-lattice relax. meas. 3=23912
 benzene, oxygen effect on u.v. spectra 2=5020, 12333
 benzene, p.m.r. meas. in nematic solvents 4=18180
 benzene, Pariser-Parr calc. and electro-optical effects 4=12497
 benzene, Pariser-Parr theory, bandwidths and transition intensities 4=25703

Organic compounds—contd

- benzene, phosphorescence decay times, calc. 0=506
 benzene, phosphorescence lifetime 0=18141
 benzene, photoionization, electron energy distrib. 1=16263
 benzene, photoionization, electron energy distrib. 1=18763
 benzene, pi-electron sextet, AMO analysis 3=2602
 benzene, π -electron suscept., calc. 2=6215
 benzene, π -electronic structure calc. 4=1285
 benzene, π -electrons, electron impact excit. 4=3890
 benzene, polarizability, effect of π -electron electrostatic interaction 0=20652
 benzene, polarization, dynamic by porous paramagnetic surfaces 4=27198
 benzene, polymerization in films, in glow discharge 1=20664
 benzene, prod. from reaction of acetylene with methyl free radicals 0=4710
 benzene—propyl alcohol, density distrib., near critical point of liquid-vapour system 4=24184
 benzene, proton spin lattice relax. time, -1.3-80°C, 28Mc/s 3=11809
 benzene, pure crystalline, S-S luminescence at 4°K 4=7201
 benzene, radiation-induced polymerization 0=6418
 benzene, Raman and electronic abs. spectra 3=15319
 benzene, Raman intensity, temp. depend. 2=8098
 benzene, Raman light intensities, ang. distrib. 4=16118
 benzene, in Raman resonator, laser beam excitation 4=21675
 benzene, Raman scattering cross-sections 4=17300
 benzene, Raman spectra, depolarization factors 0=86
 benzene, Raman spectra temp. dependence 1=9395
 benzene, Raman spectrum, using ruby laser, light source 4=14372
 benzene, range of ions (Z=2 to 13) 2=7674
 benzene, Rayleigh line study rel. to temp. 1=18417
 benzene, Rayleigh scattering depolarization factor meas. 0=19450
 benzene, refined AMO treatment of ground state 3=12848
 benzene, ring distortion 3=2640
 benzene ring, vibrational bands, temp. effects 1=12288
 benzene, rotational kinetic effect 0=8648
 benzene, Rydberg spectrum, Jahn-Teller interactions 1=17309
 benzene, scattering of neutrons 0=12940
 benzene scintillator, neutron detect. efficiency 3=2278
 benzene scintillator solns., X-rirad., luminescence decay times and energy transfer 0=19159
 benzene, second virial coeff. at low pressures 0=8699
 benzene, self-complexes, charge-transfer forces 0=13456
 benzene, self-diffusion coeff. 0=3513
 benzene, sensitization of fluorescence in anthracene vapour 1=6909
 benzene, shock excitation, CN, C₂ and CH spectra 1=2310
 benzene, single-crystal, elastic consts., determ. from sound vel. meas. 4=20645
 benzene, sol. in CCl₄, molecular rotation 3=14143
 benzene, solid, i.r. absorption 0=13690-1
 benzene, solid-liquid interface tension 0=3505
 benzene, solid sphere, in liquid, convection during melting 0=12520
 benzene soln. in CS₂ and CCl₄, proton spin-lattice relaxation 0=14664
 benzene, soln. in solid pentane, luminescence spectra 1=17917
 benzene, solutions, fluorescence, effect of u.v. and β -irrad. 1=18420
 benzene, sound absorption in solid and liquid 4=16109
 benzene, spectral symmetry reduction 1500-2000A 2=6176
 benzene, spectrum, liquid and solid, high press. effects 4=22391
 benzene spectrum, quantum mechanical integrals, Pariser-Parr theory 4=22390
 benzene, stimulated Raman effect, amplification meas. 4=16687
 benzene substituents, abnormal n.m.r. saturation behaviour 0=19170
 benzene, superheat, measurement 1=15850
 benzene, surface tension, rotation effects, temp. depend. 0=73, 19087
 benzene, surface tension, rotation effects 0=8640
 benzene, thermal ionization in flames, 1100°-1700°K 3=5623
 benzene, thermodynamic props. 0=1064

Organic compounds—contd

- benzene—toluene—PBD—POPOP scintillation mixture 3=4292
 benzene, transmission in far i.r. 2=5023
 benzene, triplet-singlet emission intensity and polariz. 2=20843
 benzene, triplet state 3=16630
 benzene, triplet state, photosensitization 2=20844
 benzene, 2.8 MeV electron beam, energy loss 1=18935
 benzene 2,4,6-trideuterated monoderivatives, n. m. r. meta proton chemical shifts 4=3908
 benzene, u.s. absorption 0=3525, 14743
 benzene, ultrasonic waveform distortion, det. of nonlinear parameters 1=4337
 benzene, vaporization, forced, at 25°C 0=14908
 benzene vapour ionization, isotope effect in energy transfer from metastable noble-gas atom 4=29866
 benzene, vapour isothermals 0=8698-9
 benzene, vapour, singlet \rightarrow triplet absorption in u.v. 1=14054
 benzene, vapour and solid, absorption spectra 3=20493
 benzene, vibrational—electronic interactions 1=17309
 benzene, vibrn. and rot. spectrum, neutron scatt. obs. 4=28237
 benzene, vibronic calculations 0=15748
 benzene, vibronic-spin-orbit perturbations and assignment of lowest triplet state 3=8289
 benzene, virial coeffs. and intermolecular mechanics 0=11544
 benzene, viscosity rel. to press. at const. temp., Doolittle free vol. eqn. analysis 4=8180
 benzene—water, du Noüy ring, interface profiles and areas 0=2163
 benzene, zero-point vibr. 2=3731
 benzenes, disubstituted, relaxation times, at 3.15 cm 1=1747
 benzenes, hexa-halogen substituted, steric forces 0=20683
 benzenes in hexane soln., dielectric relaxation times 4=18214
 benzenes, methyl-substituted, proton exchange of carbonium ions 1=11126
 benzenes, monosubstituted, electronically excited, vibration perturb. 1=12278
 benzenes, nonadditive substituent effects, orbital study 4=1287
 benzenes, p-disubstituted, forbidden character in allowed electronic transitions 0=15747
 benzenes, para-disubstituted, charac. vibration spectra 2=16537
 benzenes, polysubstituted, proton chem. shifts 4=1316
 benzenes, substituted, dipole moments 0=5985-6
 benzenes, substituted, field effects and C-H out-of-plane vibrs. 4=30453
 benzenes, substituted, proton resonance, solvent effects 0=7805
 benzenes, tri-substituted, dipole moments 0=5987
 benzenes, trisubstituted, dipole moment and relaxation time 1=14116
 benzenes, trisubstituted, Raman, i.r. and luminescence spectra 1=14035
 benzenesulphonic acid, ethers, substituted, spectra 4=12498
 benzenocarboxylic acids, i.r. absorption spectra 0=9803
 benzidine complexes, e.s.r. in weak fields 2=2019
 benzidine: I₂, Br₂, tetranitromethane electrical conductivity 1=17718
 benzidine-iodine crystals complex, elec. and mag. props. 4=26063
 benzil, heats of combustion and formation 2=21585
 benzil, optical rotatory dispersion 1=16122
 benzimidazole semiconducting properties 4=26065
 benzoic acid, heat capacity determ. using isothermal calorimeter 4=21350
 benzoic acid, heat of combustion 0=19524
 benzoic acid, molec. vibr., X-ray meas. 4=30511
 benzoic acid, in nonane, phosphorescence spectra, liq. O₂ temp. 2=18877
 benzoic acid and o-halogen derivs., i.r. spectra 3=733
 benzoic acid solns., monomer-dimer equilib., u.s. obs. 4=25745
 benzoic acids, substituted, lattice parameters and space groups 0=3249
 benzoin, heats of combustion and formation 2=21585
 with 2 benzol rings, mol. rot. mobility and rigidity 4=25694

Organic compounds—contd

- benzonitrile, electronic structure and spectra 2=3756
benzonitrile, structural detm. by microwave spectra 3=2640
benzonitriles, band intensity and structural factors 0=7750
benzophenone-benzene, dielec. losses 0=10664
benzophenone containing aromatic hydrocarbons, polarized emission and triplet-triplet absorption 4=13096
benzophenone crystals, triplet energy migration efficiency determ. 4=13095
benzophenone crystals, triplet excitation energy transfer rel. to impurity conc. 4=7202
benzophenone derivs., paramag. resonance 2=18476
benzophenone-diphenylamine, mixing enthalpy 2=7205
1;1 benzophenone-diphenylamine, heat of fusion 4=5450
benzophenone, e.s.r., energy transfer to other molecules 1=7502
benzophenone, heat of fusion 4=5450
benzophenone, luminescence characteristics 4=1788
benzophenone, microwave relaxation 2=2726
benzophenone molecule, modified FEMO calc. 1=14080
benzophenone-naphthalene mixed crystals, energy transfer and T-S spectrum 2=12592
benzophenone, optically pumped 2=6195
benzophenone, phosphorescence quenching by naphthalenes 0=944
benzophenone, phosphorescence, stimulated 3=2610
benzophenone, photoreduction, quantum yield 0=14130
benzophenone, in 3 non-polar solvents, dielectric absorption meas., mm wavelengths 0=5026
benzophenone solutions, stimulated light emission, -170°C 3=23886
benzophenone, supercooled liquid, u.s. velocity discontinuity at melting point 1=12876
3,4-benzopyrene, fluoresc. extinction by ozone 3=1696
3,4-benzopyrene, sensitized, luminescence 3=8627
3,4-benzopyrene soln. in hexane, luminescence 2=17472
3,4-benzopyrene, delayed fluorescence 3=13212
3,4-benzopyrene, luminescence, two-photon, laser excitation 3=11002
benzoquinone, mag. rotation spectrum, singlet-triplet transitions 1=14038
benzosemiquinone soln. in alcohol, nuclear polarization in 78 G fields 1=18432
benzoquinone, visible absorption spectra 0=17757
p-benzoquinone, crystal structure 0=8231
p-benzoquinone, in ethanol and methanol, e.s.r. study 1=12306
benzosulphochlorides, i. r. spectra, effect of substitutes 2=22987
benzoylacetate rare-earth complexes, in polymethylmethacrylate, luminescence, energy states 4=17612
benzoylpyridine ions, paramag. res. spectra 2=16551
1;12-benzperylene, crystal structure refinement 0=4656
1;12 benz-perylene crystals, absorption spectra 2=6572
1,12-benzperylene, polarized fluorescence and absorption spectra, 300°K 4=10230
1;2- and 3;4-benzpyrene, excimer fluoresc. 2=11376
benzpyrene, two-photon capture cross-sections, SCF-MO calc. 4=28250
3,4 benzotetraphene, delayed fluorescence 3=13212
benzyl alcohol, effect on fluorescence of acetylanthracene in hexane 1=9400
benzyl- α -t alcohol, oxidation by chromic acid, isotope effect 0=4712
benzyl alcohol, relaxation times at 3 cm 1=6870
benzylamine, relaxation times at 3 cm 1=6870
benzyl chloride, relaxation time rel. to Debye eqn. 2=7195
benzyl glutamate, proton mag. resonance 2=12838
benzyl radical, spin density, calc. 1=6055
betaine hydrochloride, e. s. r. of N^{14} 4=13308
betol, crystal growth in u. s. field 2=4388
biacetyl, energy-transfer studies by spectrophotofluorometric method 3=23890
biacetyl, luminescence, in cyclohexane solution, benzene sensitization, by triplet-triplet transfer 3=18820
biacetyl, phosphorescence quantum yield, fluid and rigid solns, radiative lifetime 3=25489
biacetyl, photolysis 0=14129
biacetyl, photo-oxidation 0=14127
biacetyl, sensitized fluorescence in soln. 3=16631
biacetyl vapour, phosphorescence quenching 2=7260
biacetyl vapour, photochemical primary process 2=6890
biacetyl vapour, photodecomposition 1=7917

Organic compounds—contd

- bimesityl derivatives, optical activity, theory 0=17843
binary gas mixtures, adsorption on C 4=15827
binary solutions, molec. scatt. power, in Raman scatt. 3=21372
biochemicals, thermoluminescence after γ -irradiation 2=14758
biphenyl, crystalline, vibrations, low-frequency 4=22476
biphenyl ions, e. s. r., K h. f. s. 4=15378
biphenyl negative ion in soln., e. s. r., exchange effects and anisotropy broadening 1=15906
biphenyl, radiolysis 0=4731
biphenyl ether anions, spin and charge exchange 1=10183
biphenyls, hydrogen yield on γ -irradiation 3=3411
bipyridyl radical, biquaternary, spin densities 3=2654
biradicals, ground-state singlet-triplet splittings, paradox 1=6026
biradicals, spin exchange in 0=17722
biradicals of two triphenylmethyl groups, singlet-triplet splittings, calc. 0=15771
bis-acetylacetone beryllium, crystal structure 0=8238
Bis (2,2' biphenylene)methane, electronic interactions, from e. s. r. 3=15362
bis (cyclopentadienyl) Fe ions, n.m.r. study of electron transfer 3=12866
bis-(cyclopentadienylmolybdenum tricarbonyl), barrier to internal rotation 0=5911
bis-cyclopentadienyl vanadium, paramagnetic resonance 1=9058
bis (N, N-diethyldithiocarbamate)-Cu, crystal and molecular structure 1=20568
bis (N, N-diethyldithiocarbamate)-Ni(II) molecular structure 1=17372
1,3-bisdiphenylene-allyl in CS_2 , e. s. r. high resolution 2=11390
1,3-bisdiphenylene-2-phenyl allyl, antiferromag. props. 4=4391
1-3-bisdiphenylene-2-phenyl allyl, exchange-ordering and forbidden spin resonance transitions 1=11483
1,3-bisdiphenylene-2-phenyl allyl, proton resonance 1=19668
1-3-bis-diphenylene-2-phenyl, n.m.r. Overhauser effect 1=17358
bis-ethylenethiourea-Cd thiocyanate, crystal structure 0=6367
1,4-bis-(p-isopropylstyryl)-benzene, secondary solute in p-terphenyl soln. in xylene, scintill. and fluorescence 2=17471
bis-N-methyl-salicylaldiminato-copper (II), crystal spectra 1=19975
bis(p-nitrophenyl) anions, intramolec. electron transfer, e. s. r. h. f. s. 3=22597
bis-salicylaldihydrato-nickel, anhydrous, cell size and space group 0=3247
bis-salicylaldiminato-copper (II), crystal spectra 1=19975
bis-salicylaldiminato-nickel (II) and -copper (II), crystal structure 0=4653
bis-(triarylphosphine) complexes of Co(II) and Ni(II) dihalides, isotropic n. m. r. line shifts 4=30477
bond energy calc., saturated hydrocarbons, from σ -electron charges 4=15324
bonds, C-H, vibrations, stretching and planar bending, -180 to 20°C 3=22577
bonds, H, cpds. with π -electrons, effect on p.m.r. 3=15383
bonds, H, vibration, by i. r. spectroscopy, proposed study 3=6378
borazine, π -electron suscept., calc. 2=6215
boro-fluorescein phosphors, phosphorescence quenching, -183° to +140°C 4=1763
boron acid-alcohol complexes, spectra, i. r. absorpt., and bonds 4=10201
boron-glycerine-fluorescein phosphor, transitions to metastable states 1=14643
boron-glycerine phosphors, concentration depolarization of phosphorescence 0=16100
boron phthalic phosphors, phosphorescence, -183° to +160°C 3=23113
brassylic acid, absorpt. and luminescence spectra 2=14749
bromanil, crystal structure 1=15111
1 bromo-2-chloroethane, far i. r. absorption 3=24031

Organic compounds—contd

- p-bromoaniline absorption ground and excited states 4=25696
 o-bromoaniline, proton resonance, effect of added acetone 0=20669
 bromobenzaldehyde, o-, m-, and p-, electronic spectra 4=28239
 bromobenzene, dissociative electron capture cross-sections, swarm meas. 4=25753
 bromobenzene, liquid, lack of orientational ordering 1=11747
 bromobenzene, multiple proton mag. resonance relaxation 1=15910
 bromochlorobenzene, m- and p-, near u.v. absorption 4=26227
 2-bromo-5-chloro-thiophene, nuclear magnetic resonance 1=5287
 bromocyclobutane, microwave spectrum 2=14266
 bromocyclohexane, u.s. studies of isomerization 1=4340
 bromodichlorofluoromethane (CBrCl₂F), vibrational spectrum, molecular and thermodynamic props. 0=4207
 bromoethane and CS₂, photoionization and Lyman- α detection 3=14416
 p-bromo-fluorobenzene, proton resonance spectrum 1=1757
 bromoform, i.r. reflection spectra 1=4343
 bromoform, liquid, i.r. dispersion, 630-800 cm⁻¹ 3=18817
 bromomethanes, force constants 1=7453
 α -bromonaphthalene, mol. dipole-dipole interaction, from dielectric relaxation 3=23897
 α -bromonaphthalene, phosphorescence, stimulated 3=2610
 bromonitrobenzene, i.r. absorption spectrum 1=6952
 p-bromophenol, near-u.v. absorption spectrum 4=22387
 p-bromotoluene crystals, phase-changes, first-order, study using positron annihilation 4=23300
 o-bromotoluene, singlet \rightarrow triplet absorption in u.v. 1=14054
 1,3-butadiene anion in liq. NH₃, e. s. r. 4=28254
 butadiene, electronic structure calc., Pariser-Parr approx. validity 4=15323
 butadiene, longitudinal polarizability of π -electrons 1=17338
 1,3 butadiene, photolysis, primary processes and photopolymerization mechanism 4=17868
 butadiene, pi electron localization energies, ZDO calc. 4=12430
 butadiene, π -electrons, valence bond theory 3=6375
 butadiene, polarizability calc. 0=17770
 butadiene, quantum-mech. model of molecule 1=2343
 1,3-butadiene vapour, u.v. absorption and ionization cross-sections, 9-25 eV 3=1932
 butadiene polymerization spectra, with Li, Na, K, in solns. 4=25796
 butane sol., diffusion coeff. of polystyrene 0=10654
 n-butane adsorbed on porous Vycor glass 2=2779
 butane-bromine mixture, luminescent discharges 2=6883
 n-butane, dissociation, ratios of small whole numbers 4=25755
 n-butane, electric discharge decomp. 0=975
 n-butane, excited, elementary processes 3=12873
 n-butane, fragmentation by electron impact 2=2030
 n-butane, gas-phase radiolysis 3=23550
 butane-He mixtures, in GM counters 0=12721
 n-butane, Hg photosensitized decomposition 1=20753
 butane, high-freq. discharge effect 2=21588
 butane ions, dissociation, after charge exchange formation, from mass spectrum 4=9779
 n-butane, negative ion mass spectra 0=3740
 butane, photolysis 1=12681
 n-butane, photolysis in vacuum u.v. 4=4709
 butane, photosensitized isomerization, reaction kinetics 4=13739
 n-butane, thermal decomposition 1=1469
 n-butane, thermodynamic props. 0=1064
 butane, unimolecular reactions of excited molecules 3=4786
 n-butane vapour ionization, isotope effect in energy transfer from metastable noble-gas atom 4=29866
 n-butane vapour, u.v. absorption and ionization cross-sections, 9-25 eV 3=1932
 butanediol 1,3, dielec. relax. rel. to assoc. 3=1704
 butanediol 1,3-n-propanol mixtures, dielec. relax. times distrib. 4=195
 butanediols, dielec. relax. 2=13351

Organic compounds — contd

- butanol, adsorption from aq. soln. 4=29610
 n-butanol, dielec. relax. 2=13351
 butanol, diffusion in water, trajectories, finite cell 3=18806
 butanol, Rayleigh scattering depolarization factor meas. 0=19450
 n-butanol, self-diffusion at 25°C 0=14632
 1-butene, catalytic decomposition 1=20733
 butene-2, cis-trans isomerism, benzene-photosensitized 3=25828
 butene-2, cis-trans isomerization in shock tube 3=16160
 butene-1, Hg-photosensitized reaction 2=19158
 butene-1, photoionization and vac. u.v. absorption 2=6178
 1-butene, thermodynamic props. 0=1064
 butene-2, gas-phase addition of HI 4=26750
 butene-2, Hg-photosensitized decomp. at low press. 3=8971
 t-butoxy radical, decomposition rel. to pressure 3=3385
 butter, rheology and thixotropy 1=14889
 butyl acetylene, tertiary, *l*-type doubling and resonance 3=19960
 n-butyl alcohol, Raman spectra 2=8099
 butyl alcohol, soln. in water, proton relax., conc. depend. 4=21159
 n-butyl alcohol, sound velocity meas. 4=8206
 butyl alcohol, surface tension, rotation effects, temp. depend. 0=73
 butyl alcohol, tertiary, in solvents, n.m.r. 2=10283
 n-butyl alcohol, vaporization, forced, at 25°C 0=14908
 butyl alcohols, proton spin-lattice relaxation 1=4362
 t-butyl chloride, nuclear quadrupole relaxation and its temp. dependence 3=25598
 butyl cyanide, tertiary, microwave structure det. 2=6127
 butyl elastomers, rolling friction 6=5472
 butyl ether, of ethylene glycol, in water, light scatt., 4=24214
 butyl iodide, tertiary, -HI-isobutylene equil. 2=19139
 di-t-butyl nitroxide dissolved in methylcyclohexane, e. s. r. linewidths, effects of hydrostatic press., anisotropic region 4=24242
 di-t-butyl peroxide, pyrolysis in presence of propylene 2=15136
 butyl phenols, spectral shift 1=14018
 di-butyl-phthalate as vacuum diffusion pump fluid 4=8260
 butyl peroxide, di-tertiary, pyrolysis 2=6872
 butyl stearate, dielectric absorpt., two position model 4=12965
 butyl stearate, dielectric relaxation 0=19145
 butyle acetylene, tertiary, microwave structure det. 2=6127
 di-n-butylether, dielec. const. near 9000 Mc/s 2=21916
 di-n-butylether, dielec. const., rel. to purity 2=17769, 17771
 1-butyne, absorption and photoionization coeffs., 1050-2000A 4=8616
 butyne, Hg-photosensitized decomp. 4=4708
 butyronitrile, microwave spectrum 3=6409
 butyronitrile, N¹⁴ n.q.r. 2=14861
 CR 39, photoelasticity under dynamic loads 1=3821
 cadmium bromide dipyrindate, crystal structure 3=6854
 caffeine, arrangement of water molecules 0=6369
 camphor, cryoscopic const., by micro-melting point method 4=362
 camphor, molec. tumbling in solid solutions, n. m. relax. study 4=30741
 d-camphor, n.m.r. and spin-lattice relax., -138° to +18° C 3=20679
 d-camphor, phase transition, II-III at high press. 4=13510
 camphor on quartz, epitaxy 3=20805
 caproic acid, antifoaming action 2=15168
 ϵ -caprolactam, irradiated single crystals, e. s. r. studies 4=4400
 ϵ -caprolactam, irradi. single crystal e. s. r. 4=23044
 caprylic acid, surface tension in HCl 0=71
 N-carbamyl glycine, e. s. r. of irradiated crystal 2=18942
 carbazole-chloranil charge transfer complex, e. s. r. 3=8708
 carbazole donor diphenyl acceptor mixtures, e.p.r., in irradi. ether-ethanol glasses, 77°K 3=22595
 carbazole, luminescence 2=6629
 carbazole, phosphorescence and vibr. structure 4=7203
 carbazole, in sat. hydrocarbon phosphorescence, 77°K 4=20499
 carbohydrates, charred, dynamic nuclear polariz. 2=14329

Organic compounds—contd

- carbon disulphide, i.r. absorption, high-resolution study 2=16525
 carbon disulphide, i.r. reflection spectra 1=4343
 carbon disulphide, light scatt., orientational interaction and rotation of molecules 4=24162
 carbon disulphide, optical absorption, intensity-induced 4=5181
 carbon disulphide, Raman intensity, temp. depend. 2=8098
 carbon disulphide, Raman overtone intensities 2=18447
 carbon tetrabromide, absorption edge, press. depend. 0=4407
 carbon tetrabromide p-xylene complex, crystal structure 2=17027
 carbon tetrachloride, α -particle stopping power 2=326
 carbon tetrachloride-benzene solns., refractive index 0=10667
 carbon tetrachloride on C substrate, adsorption isotherms, 200° to 300°K 2=4498
 carbon tetrachloride, compressibility 0=12400
 carbon tetrachloride-cyclohexane, liquid diffusion 3=7201
 carbon tetrachloride, decomposition by γ -rays 0=18441
 carbon tetrachloride, dielec. constant 2=17769, 17771
 carbon tetrachloride, elec. cond., rel. to moisture content 1=18421
 carbon tetrachloride, electrostriction 0=934
 carbon tetrachloride, fast electron diffraction, energy analyser 0=9090
 carbon tetrachloride, Fermi resonance in liq. and gas 1=19629
 carbon tetrachloride, flow anisotropy, friction const. 3=21316
 carbon tetrachloride, force constants 0=5897
 carbon tetrachloride-HCl* exchange reaction 0=8300
 carbon tetrachloride, i.r. reflection spectra 1=4343
 carbon tetrachloride, light scatt., absolute intensity, exper. determ. 4=24211
 carbon tetrachloride, N-H stretching freqs. 2=7219
 carbon tetrachloride, Raman and electronic abs. spectra 3=15319
 carbon tetrachloride, Raman intensity, temp. depend. 2=8098
 carbon tetrachloride, Raman overtone intensities 2=18447
 carbon tetrachloride, Raman spectra, depolarization factors 0=86
 carbon tetrachloride, Raman spectra temp. dependence 1=9395
 carbon tetrachloride, solid, n. q. r. spectrum 2=4295
 carbon tetrachloride, solid, nuclear quad. resonance 2=790
 carbon tetrachloride, transmission in far i.r. 2=5023
 carbon tetrachloride, u.s. absorption 0=14743
 carbon tetrachloride, u.s. absorption and viscosity 2=7208
 carbon tetrachloride, ultrasonic waveform distortion, det. of nonlinear parameters 1=4357
 carbon tetrachloride, vaporization, forced, at 25°C 0=14908
 carbon tetrachloride, vaporization, forced, thermodynamics 0=3694
 carbon tetrachloride vapour, u.s. absorpt., dispersion 2=2772
 carbon tetrachloride, viscosity rel. to press. at const. temp., Doolittle free vol. eqn. analysis 4=8180
 carbon tetrachloride, liquid, critical consts., calc. from quasi-f.c.c. lattice model with vacancies 1=1739
 carbon tetrachloride, Raman spectrum 1=847
 carbon tetrafluoride, γ -irradiation at low temp. 3=12874
 carbon tetrafluoride, gaseous, Raman spectrum, vibrational lines 1=6019
 carbon tetrafluoride, isothermal PV curves, to 20 000 kg/cm² 0=14042
 carbon tetrafluoride, refractivity, press. depend. 0=6839
 carbon tetra-halides, molecular rotation 2=8075
 carbon tetraiodide, absorption edge, press. depend. 0=4407
 carbonate Co(III) complexes, i.r. spectra 2=3747
 carbonyl derivatives of biphenyl and naphthalene, luminescence 1=3576
 carbonyl fluoride, molecular structure 3=6410
 carbonyl group, vibration band shifts in solvents 2=15598
 carbonyl, i.r. bands, splitting due to water 3=8283
 carbonyl sulphide, power saturation of J = 1 \rightarrow 2 rotational transition 0=1500
 carbonyl sulphide, r.f. spectra 0=20642

Organic compounds—contd

- carbonyl, 3000 Å absorption, mag. dipole character and rotatory power 3=728
 carbonyl, vacuum u.v. spectrum, electronic transitions, correl. 3=22583
 carboxyhydroxymethyl radical e.s.r. line shape 1=17341
 carboxyl phosphate, electron distribution calc. 0=7736
 carboxyl, vacuum u.v. spectrum, electronic transitions, correl. 3=22583
 carboxylate hydroxy methyl radical ion (HOCHCO₂⁻), e.s.r. study 1=2346
 carboxylic acids, fluorescence and absorption spectra 0=18140
 carboxylic acids, long wavelength i.r. absorpt. spectra, 20° and -175°C 4=25697
 carboxylic acids, molecular potential energy curves 1=5998
 carboxylic acids, Raman spectra intensities 1=14033
 carcinogens, crystal fluorescence 0=8014
 carnauba wax, electret formation 2=18782, 23507
 carnauba wax electrets, rectifying props. 1=6198
 β -carotene, anomalous dispersion 2=2720
 β -carotene cis-trans isomers, photoconductivity 1=3787
 β -carotene photocond. cell, colour response 4=28653
 β -carotene, photoconductive properties 1=8965
 β -carotene, photo- and semiconduction 1=6180
 β -carotene, resonance Raman effect 0=2175
 carotenoids, absorpt. spectra and π -electronic struct. 4=22400
 p- and 1-carboxime mixture, melting, excess free energy 0=19502
 casein hydrate, dielectric permittivity at hyperfrequencies 3=22988
 castor oil, luminescence, under a.c. voltage 3=16634
 castor oil, permittivity and dielectric losses in electric field 0=20950
 cellophane, electroluminescence 1=14660
 celluloid, film thickness measurement by photometry 1=9358
 cellulose acetate, conductivity, elec., induced by γ -rays and neutrons, time var. 4=20402
 cellulose acetate film, refractive index meas. 0=6941
 cellulose, carboxymethyl-, frozen aq. soln., concentration profiles 0=6048
 cellulose, crystal prep. and structure 1=7836
 cellulose, dry, conduction and electrolysis 3=20377
 cellulose fibres, electron diffraction 0=18337
 cellulose fibres, orientation 2=15082
 cellulose fibres, orientation, theory, 1=20653
 cellulose fibres, structure and chemical stability 1=20652
 cellulose, moiré fringes under X-ray microscopy 3=13578
 cellulose nitrate, nuclear track registration, energy-loss rate 4=11866
 cellulose, sorbed water, NMR study 1=11602
 cellulose of Valonia, electron diffraction, structure 0=18337
 cellulose, X-ray diffr. study of structural changes on heating 2=14980
 cellulosic materials, self-heating and ignition 1=7906
 cellulosic materials, thermal diffusivity 0=10796
 cetyl alcohol films, water evaporation reduction 0=14890
 cetyl alcohol, monolayers, viscosity studies 1=15782
 cetyl alcohol, n.m.r., mol. rotation 3=15958
 cetyl alcohol, solid, orient. in d.c. field 2=14644
 cetyl alcohol, on water, damping out ripples 0=12411
 cetyl-stearyl alcohol mixtures, evap. 2=13491
 charge-transfer complexes, resistivity rel. to press. 4=22730
 charge-transfer complexes in soln., effect of high press. 4=2686
 charge transfer complexes in solns., photodissociation, from e.s.r. 4=4706
 chelates of quinoxaline 2,3-dithiol with Ni, Co and Pd spectra and structure 0=20631
 Chichibabin's hydrocarbon, association, e.s.r. meas. 4=12535
 chinoxalin derivs., u.v. absorpt. spectra 2=22996
 chloral and chloral hydrate, u.s. absorpt. 2=17460
 chloral hydrate, n. q. r., orientational melting processes 2=791, 8688
 chloranil, anomalous dispersion in i.r., meas. 2=12578
 chloranil, crystal structure 1=15111
 p-chloranil, crystal traps, from current-voltage char. 4=10101
 chloranil, electronic structure calc. 2=8115

Organic compounds—contd

- chloranil, i.r. absorptivity molar, effect of particle size 3=14346
 chloranil and its hexamethylbenzene complex, nuclear quadrupole resonance 0=16193
 chloranil-n-phenylenediamine complex, elec. and mag. props. 4=26063
 chloranil, nuclear quadrupole resonance 3=8743
 chloresteryl caprate, liquid crystals, structure 4=24171
 chlorobenzene, absorption frequency shifts 0=1508
 chlorobenzene + bromobenzene, mol. interactn. 3=296
 chlorobenzene in carbon tetrachloride, n. m. r. relaxation time 4=28263
 chlorobenzene, dielectric absorption meas., mm wavelengths 0=5026
 chlorobenzene, dissociative electron capture cross-sections, swarm meas. 4=25753
 chlorobenzene, glow discharge in vapour 0=9017
 chlorobenzene, liquid, lack of orientational ordering 1=11747
 chlorobenzene, microwave relaxation 2=2726
 chlorobenzene, microwave spectrum and moments 4=1288
 chlorobenzene, multiple proton mag. resonance relaxation 1=15910
 chlorobenzene-nitrobenzene, dielectric relaxation phenomena 3=21392
 chlorobenzene soln. in CS₂ and CCl₄, proton spin-lattice relaxation 0=14664
 chlorobenzene solutions, fluorescence, effect of u.v. and β -irrad. 1=18420
 4-chlorobenzoic acid, p. m. r. meas. in nematic solvents 4=18180
 p-chlorobenzoic acid, Zeeman quadrupole spectra 1=8857
 p-chlorobromobenzene, Raman linewidths meas. 4=6618
 1-chloro-2-butyne, r.f. spectrum, internal rotation consts. 0=1528
 chlorocyclohexane, u.s. studies of isomerization 1=4340
 chlorodifluoromethane, molecular consts. 3=6411
 chlorodifluoromethane, vibrational collision lifetimes in A and He, intermolec. potential 0=15787
 chlorofluoroethylenes, ionization potentials 0=3735
 chloroform, adsorption isotherms on C substrate, 200° to 300°K 2=4498
 chloroform, CHCl₃⁻ ions, prodn. by charge exchange 3=7444
 chloroform-carbon tetrachloride, dipole interactions 0=935
 chloroform, deuterio- (CDCl₃), Raman spectra, H-bonding effects on CD band 1=6020
 chloroform and deuteriochloroform mixed crystals, Raman and i. r. spectra 4=10203
 chloroform, diffusion of polybutyl methacrylate 0=14636
 chloroform, e. m. wave propag. meas. 4=3145
 chloroform, gaseous, Raman spectra 1=7473
 chloroform, i.r. dispersion 0=83
 chloroform, i.r. reflection spectra 1=4343
 chloroform, light scatt. rel. to depolarization ratio 4=24394
 chloroform, liq. and crystalline, Raman and i. r. spectra 4=10203
 chloroform, liquid, lack of orientational ordering 1=11747
 chloroform, microwave spectrum 0=15737
 chloroform, mol. struct. 2=16542
 chloroform, N-H stretching freqs. 2=7219
 chloroform, optical anisotropy, calc. 0=14618
 chloroform, optical constants from i.r. reflection spectrum 1=7698
 chloroform, proton relaxation time 1=6872
 chloroform, Raman intensity, temp. depend. 2=8098
 chloroform, Raman overtone intensities 2=18447
 chloroform, Raman spectra, depolarization factors 0=86
 chloroform, Raman spectra intensities 3=20006
 chloroform, Raman spectra temp. dependence 1=9395
 chloroform, Raman spectrum rel. to change of state 3=731
 chloroform, self-association const., from n. m. r. 2=2703
 chloroform, Smoluchowski eqn. treatment 1=10499
 chloroform, in soln. with dioxane, ethylether, ethyl alcohol, acetene, phosphorylchloride, intermol. interacts. 4=25784
 chloroform solutions, n. m. r. study of intermolecular H bonds 1=11113
 chloroform, superheat, measurement 1=15850
 chloroform, transmission in far i. r. 2=5023
 chloroform, u.s. absorption 0=127

Organic compounds—contd

- chloroform, u. s. absorption and viscosity 2=7208
 chloroform, ultrasonic waveform distortion, det of nonlinear parameters 1=4337
 chloromethane, absorption frequency shifts 0=1508
 chloromethanes, force constants 1=7453
 chloromethanes, gaseous, ultrasonic relaxation 1=8162
 chloromethanes, polycryst., Raman spectra, liq. N₂ temp. 4=22905
 chloromethylsilane, microwave spectrum and structure 2=6151
 α -chloronaphthalene-benzene, dielec. losses 0=10664
 α -chloronaphthalene, mol. dipole-dipole interaction, from dielectric relaxation 3=23897
 chloronitrobenzene, i.r. absorption spectrum 1=6952
 m-chloronitrobenzene, normal and supercooled, u.s. velocity, temp. depend. 0=6789
 o-chloronitrobenzene, u.s. velocity 0=10659
 2-chloro-2-nitropropane, molecular rotational relaxation 1=12898
 o-chlorophenol, n. m. r. solvent effects 0=91
 p-chlorophenol, n. m. r. solvent effects 0=91
 o-chlorophenol solns., microwave absorption 0=5027
 chlorophyll pigments, chemical exchange, H-D, with deuterium cpds. 4=26751
 chlorophyll A, diffusion model of localized exciton 2=16633
 chlorophyll a, electrical conductivity and photo-conductivity 3=20401
 chlorophyll-a and fatty alcohols, interaction in monomolecular films 4=25792
 chlorophyll a, monolayers on aqueous surfaces, fluorescence 4=20078
 chlorophyll a, spectral distribution rel. to layer thickness 3=20400
 chlorophyll, absorption and lumin. spectra of solns. 2=15601
 chlorophyll, aggregation state, optical study 1=6863
 chlorophyll and analogues, on ZnO, CdS, Pt, photo-e. m. f. 0=1676
 chlorophyll, anti-Stokes fluorescence yield 1=9399
 chlorophyll, chemiluminescence 1=3872
 chlorophyll, fluorescence of monolayers 4=28295
 chlorophyll, fluorescence spectra 1=7707
 chlorophyll, fluorescence spectra 1=11361
 chlorophyll, luminescence efficiency of solutions 2=15602
 chlorophyll molecule with Mg atom in centre, polarization and fluorescence symmetry 3=2635
 chlorophyll, monomolec. films, fluorescence quenching and energy transfer 4=30456
 chlorophyll a, monomolecular films 4=3942
 chlorophyll, in soln. and cellulose butyrate films, luminescence 0=2177
 chlorophyll a in 3-methoxy-1-butanol, fluorescence yield, influence of β carotene 4=25782
 chlorophylls a and b and their pheophytins, metastable state 4=15364
 chlorophylls a and b, photo- and semiconduction 1=14513
 2-chloropropane, microwave spectrum, molec. struct. and quadrupole coupling consts 4=12499
 p-chlorotoluene, dielectric relaxation 0=19145
 p-chlorotoluene, singlet \rightarrow triplet transition 0=16099
 chlorotoluenes, Cl³⁵ nuclear quad. resonance 2=10279
 chlorotrifluoromethane, dipole moment 2=3721
 chlorpromazine, conductivity rel. to phase transformations 3=10873
 chlorpromazine, semicond. props. 2=14552
 chlorpromazine, semiconducting props. rel. to temp. 1=19875
 cholesterol acetate, positronium decay times, temp. depend. 4=2652
 cholesterol esters, liquid crystals, transparency 3=21370
 cholesterol, optical rotation 4=29628
 choline halides, structure 0=8245
 chrysene in alcohol, delayed fluoresc., mech., temp. var. 4=30700
 chrysene, delayed fluorescence 3=13212
 chrysene, ionization-dissociation processes caused by electron impact 4=28248
 chrysene monocrystals, polarized light absorption, 20°K 1=11364
 chrysene, phosphor.-fluor. ratio 2=10628
 chrysene, phosphorescence at low temp. 3=13211

Organic compounds—contd

- chrysene, n.m.r. spectrum, ring current assumption 4=6644
 chrysene, polymerization of styrene 0=8317
 cinchonine and cinchonidine, optical rotation, effect of irradiation by 2 MeV electrons 1=11355
 cis-butene-2 vapour, u.v. absorption and ionization cross-sections, 9-25 eV 3=1932
 cis-crotononitrile, microwave spectrum, barrier to rotation, dipole moment 3=17594
 cis-1-chloropropylene, microwave spectrum, internal rotation barrier, quadrupole coupling const., and dipole moments 4=20079
 cis 1, 2-difluoroethylene and trans 1, 2-difluoroethylene, i.r. spectra and vibrations 2=1996
 cis-1-fluoropropylene, microwave spectrum 2=20846
 cis-, gem-, and trans-dideuteroethylenes, vapour pressures 3=8247
 cis and trans 1,2-difluoroethylene, n.m.r., gas phase 3=15385
 clathrate hydrates, structure 1=20569
 clathrates containing Kr⁸⁵, preparation 1=13683
 clathrates, nitrogen molecule pot. energy 2=8076
 coal-tar pitch, parallel plate viscometer meas. 0=6733
 coals, e.s.r., effect of O 2=18481
 collidine-water solns., conc. fluctuations, light scatt. study 3=21365
 collodion, Bi and Sn films on, nucleation texture 1=15176
 collodion, as electrolytic cell membrane, Na Cl-KCl 4=26757
 collodion films, 0.5-16 keV electron penetration 0=7163
 collodion films, on polished Ag, colour in white light 0=12492
 collodion membranes, electro-osmosis 2=11612
 collodion thin films, electron microscopy image contrasts 4=23574
 colophane resin, use in swelling of nuclear emulsions 0=12757
 complex cpds., in solution, effect of solvent on spectra 2=15595
 complex molecules, polarization of luminescence 0=10055
 complex mols., luminescence polariz. 2=2007
 complex mols., -180°C luminescence yield 2=14740-1
 complex, viscous solns., reversible orientation dichroism 3=23881
 complexes of aromatic hydrocarbons with iodine, electron spin resonance 1=3938
 complexes of aromatic hydrocarbons with iodine, electronic conduction 1=3775
 complexes, dipole moments, effect of H acid-base bonding 4=25623
 complexes, photoionization, by vacuum u.v. bibliography 4=27469
 compounds between graphite and polycyclic aromatics, electronic properties 1=3763-4
 conjugated systems, steric effect on Π - Π^* transition 4=9752
 copper benzoate, e.s.r. line width, temp. var. 4=10318
 copper phthalocyanine, crystals, resistance, effect of halogens 3=6593
 coronene, in boric acid glasses, photo-ionization by u.v. 0=21290
 coronene, delayed fluorescence 3=13212
 coronene, e.s.r. obs. of $\Delta m = 1$ transitions 3=1186
 coronene in ethyl tetrahydrofuran, frozen, luminescence 2=6627
 coronene, luminescence, u.v. 4=22932
 coronene, molecular C ions formed in spark source, mass spectrographic study 4=9782
 coronene, and mono- and divalent ions, electronic spectra correlations 0=20648
 coronene in n-heptane, luminescence linewidth temp. var. 4=25698
 coronene, in perhydrocoronene, phosphorescence, u.v. excitation 1=1178
 coronene in polymethylmethacrylate host, e.s.r. triplet state, effect of temp. 4=23054
 coronene, spectra, quasi-linear, true line-width 4=25699
 cotton, crystal structure 2=15086
 coumarine, nuclear spin-spin coupling of protons 1=2499
 creatine, X-irrad., e.s.r. of radicals 4=13311
 cresole, rotational mobility, orientational relax., temp. depend. 4=25700
 croconate ion, config. and dimension, Mo calc. 4=29149

Organic compounds—contd

- crude oil, in situ combustion criteria 0=14105-7
 cryptocyanine, soln. in methanol, use as Q-switch in ruby laser 4=24930
 crystal-violet, photoelectromotive forces 3=25418
 crystal violet, polarization of fluorescence 2=6630
 crystals, band theory and Hall effect prediction 4=6993
 crystals, C-H...O bonds 2=20900
 crystals, with H bonds, far i.r. absorption 4=22828
 crystals, mixed and surface films, rot. transitions 2=8765
 crystals, phase-changes, first-order, study using positron annihilation 4=23300
 crystals, SO₂ free radicals in, e.s.r. and optical spectra 2=16565
 cumol, cracking, on Al₂O₃ or zeolites, effect of additives 3=20996
 cupric acetate monohydrate, mag. studies 3=25505
 cupric benzoate trihydrate, crystal structure 3=11273
 cupric formate tetrahydrate, antiferromagnetism, two-dimensional 4=10298
 cyameluric acid derivs., aq. solns., u.v. 2=17466
 cyanamide, HDNCN and D₂NCN, spectra 17-57 Gc/s 3=10532
 cyanamide, molec. rotational consts., corrected 3=2649
 cyanamide, rotational spectrum 2=1990, 14267
 cyanamide, vibrational spectra calc. 3=4764
 cyanides, complex, metal-ligand bonds 1=17333
 cyanine dyes, adsorbed on Ag halides, spectrographic props. 2=9411
 cyanine dyes, electronic spectra, press. effects 2=22988
 9-cyano-anthracene, crystal structure 0=4657
 cyanoacetylene, liquid, dielec. const. 3=7216
 cyanocarbons, thermochemistry 3=18439
 cyanogen absorpt. rel. to components of space vel. 3=7037
 cyanogen, crystalline, i.r. spectrum 4=4280
 cyanogen, dissociation 2=12349
 cyanogen, dissociation energy in shock waves 1=11131
 cyanogen, free-radical, e.s.r. detect. 2=12351
 cyanogen, ground state wave-function 2=6199
 cyanogen, lattice consts., space group, arrangement of mols. in unit cell 3=25729
 cyanogen-oxygen flames, plasma stream prod. 2=3036
 cyanogen, rotational analysis of 3000 Å absorpt. system 3=22582
 cyanogen, transient species in radiolytic polymerization 0=21291
 cyanuric and formaldehyde resins, fluorescence, on addition of aromatic ring compounds 3=15715
 cyanuric chloride, N¹⁴ quadrupole resonance 1=10198
 cyclic cpds., ice nucleation 3=3267
 cyclic peroxides, proton resonance, intramolecular hindering potential 1=17359
 cyclobutadiene, vibrational-electronic interactions 1=17309
 cyclobutane, C₄H₆ and C₄D₆, Raman spectra 2=16543
 cyclobutane, isotope effects in pyrolysis 3=8961
 cyclobutane, normal vibrations, potential consts. and vibration-rotation interaction 4=6614
 cyclobutane, photolysis 2=4551
 cyclobutane, solid, molecular motion, p.m.r. meas. 4=20611
 cyclobutane, vibr. spectra and structure 4=30457
 cyclobutanes, proton spin-spin coupling consts., relative sign 3=8296
 cycloheptatriene cycloheptatrienyl radical, e.s.r. spectrum 3=4778
 cycloheptatrienyl, e.s.r. in naphthalene crystals 3=1184
 1,3-cyclohexadiene, vapour phase photochemistry 3=11355
 cyclohexadienyl radical, e.s.r. 3=12859
 cyclohexadienyl radical, spin densities 2=18493
 cyclohexadienyl radicals, formation by reaction of H with solid benzene 3=1388
 cyclohexane, absorption, acoustic waves, reson. 3=8352
 cyclohexane, adhesion to alkali halide crystals 2=9250
 cyclohexane-benzene binary mixtures, radiolysis 4=23677
 cyclohexane-benzene soln., irradiated, benzene consumption 4=13743
 cyclohexane binary liq. mixtures, thermodynamic props. 4=18191
 cyclohexane, complex refractive index, below 5 mm 0=81

Organic compounds—contd

- cyclohexane crystals, phase-changes, first-order, study using positron annihilation 4=23300
 cyclohexane derivatives, dielectric and molec. props. 0=15708
 cyclohexane, dielec. const. near 9000 Mc/s 2=21916
 cyclohexane, dielec. const. rel. to purity 2=17769, 17771
 cyclohexane, deuterocyclohexane, Raman spectra, intensity and depolarization calc 4=12501
 cyclohexane-1, 2-dione radical anion, e. s. r., h. f. s. 4=30472
 cyclohexane, electron inelastic scattering 4=12394
 cyclohexane, elementary dissociation processes 2=20880
 cyclohexane, enthalpy change calc. for isomeric reaction 0=10662
 cyclohexane, excited, dissociation 3=25149
 cyclohexane, γ -irrad. at 77°K, free radicals, e. s. r. 1=14107
 cyclohexane, heat transfer, electrical conductivity and ion mobilities 3=14148
 cyclohexane hexahalides, crystal structure 1=12348
 cyclohexane, i. r. absorpt., temp. depend. 3=8286
 cyclohexane, i. r. absorption bands, width and profile 0=20614
 cyclohexane, ion pair average energy loss 4=24252
 cyclohexane, liquid, atomic struct. 2=15564
 cyclohexane, liquid order study 2=9257
 cyclohexane liquid, ion mobility rel. to temp. 4=14180
 cyclohexane, liquid radiolysis 1=9175
 cyclohexane mixed crystals, with naphthalene and methyl derivatives 0=11777
 cyclohexane, monocrystalline, u. s. absorption 0=11572
 cyclohexane-O₂ system, free radical kinetics 1=20727
 cis-4-cyclohexane-1, 2-dicarboxylic anhydride, n. m. r., multiple reson. analysis 4=9774
 cyclohexane, props. as solvent of polar molecules, dielec. relaxation effects 4=197
 cyclohexane radicals, e. s. r. spectra 0=5969
 cyclohexane, radiolysis of pure liquid and benzene soln. 0=14134
 cyclohexane, radiothermoluminescence 0=21018
 cyclohexane, Raman spectra, temp. depend. 2=703
 cyclohexane, self-diffusion coeff. 0=3513
 cyclohexane, single crystals growth 3=11229
 cyclohexane, solid, molecular resonance acoustic absorption 0=17887
 cyclohexane, solid, positron annihil., temp. var. 3=2774
 cyclohexane, solid, resonance absorption 2=12376
 cyclohexane soln. in CS₂ and CCl₄, proton spin-lattice relaxation 0=14664
 cyclohexane, sound absorption in solid and liquid 4=16109
 cyclohexane vapour, i. r. spectrum intensities 4=6619
 cyclohexane, vapour phase radiolysis 1=9176
 cyclohexanes, 9-methyl-substit., Raman spectra meas. 4=6632
 cyclohexanone, space group at -180°C 0=18367
 cyclohexatriene, formation from benzene, mech. 2=3731
 cyclohexylaminomaleinimide, fluorescence yield 1=12887
 cyclohexyl derivatives, n. m. r. spectra 3=8297
 cyclohexyl fluoride, rotational barriers and conformational preferences, n. m. r. study 4=20103
 cyclohexyl halides, γ -irrad. at 77°K, free radicals, e. s. r. 1=14107
 cyclohexyl radical, ring inversion 4=28278
 cyclooctatetraene, C¹³ hyperfine splitting in e. s. r. spectrum 1=19663
 cyclo-octatetraene complex with Fe tricarbonyl, molec. and valence structure 3=2643
 cyclooctatetraenyl radical, electron-spin resonance, h. f. s. 0=15734
 cyclo-paraffins, luminescence 3=21380
 cyclopentadiene, n. m. r. spectra 0=1505
 cyclopentadienide ion, vibrational—electronic interactions 1=17309
 cyclopentadienyl and cyclohexenyl free radicals, e. s. r. study 4=6640
 cyclopentadienyl-metal cpds., n. m. r. spectra 0=1506
 cyclopentadienyl radicals, e. s. r., above 800° C 4=12534
 cyclopentane derivatives, rotational isomers 1=19674
 cyclopentane radicals, e. s. r. spectra 0=5969
 cyclopentane vapour, i. r. spectrum intensities 4=6619
 cyclopentane vapour, u. v. absorption and ionization cross-sections, 9-25 eV 3=1932

Organic compounds—contd

- cyclopentene molecule, microwave study 2=14268
 cyclopropane, deactivation, collisional transition probabilities 4=17324
 cyclopropane, highly vibrationally excited, collisional deactivation with ethylene, He, Ar and N₂ 4=25783
 cyclopropane-iodine system, thermodynamics 2=17080
 cyclopropane, ion mobility in argon 1=2945
 cyclopropane isomerization and reaction with iodine 1=7903
 cyclopropane, isotope effects in pyrolysis 3=8961
 cyclopropane, rate of decomposition 3=16158
 cyclopropane reaction, unimolecular, statistical complex ion calc. 4=13707
 cyclopropane, reactions initiated by β -decay of tritium 0=14132
 cyclopropane, slow electron diffusion meas. 2=13381
 cyclopropane, structure, from electron-diffraction sector-microphotometer data 4=20036
 cyclopropane, unimolec. decomp. 0=8302
 cyclopropane vapour, use in Geiger counters 1=13197
 cyclopropane, viscothermal and thermal relaxation 4=24271
 cyclopropanes, chlorinated, pure n. q. r. 3=25142
 cyclopropanes, photosensitized reaction 1=20754
 cyclopropyl chloride, molec. structure 4=12800
 cyclotadienyl radical, vibrational—electronic interactions 1=17309
 cysteine and cystine, effect on radiolysis of NiSO₄ 4=7775
 cysteine, formation of S radicals by irradiation 2=6231
 L-cystine dihydrobromide, crystal structure 0=8234
 L-cystine hydrobromide, crystal structure 4=20767
 L-cystine dihydrochloride, irradiated, e. s. r. meas. 4=13310
 L-cystine dihydrochloride, irrad. at low temp., free radical prod., e. s. r. study 4=20591
 cytosine irrad. with u. s. waves, fluorescent material formation 4=7772
 cytosine monohydrate (C₄H₈N₃O₃·H₂O), crystal structure 3=8868
 DL-serine, γ -irradiated, paramagnetic resonance 1=14800
 DL-tartaric acid, e. s. r. of irradiated crystal 2=6691
 DNA, elastic modulus 2=2663
 DNA irradiated, e. s. r. 4=3903
 DPANO free radical, double quantum transit. 2=4247
 DPPH (diphenylpicrylhydrazyl), double quantum transition 1=14092
 DPPH, double magnetic resonance of free radical 1=12312
 DPPH, e. s. r., g-tensor anisotropy 3=23227
 DPPH, e. s. r. in soln. 2=7232
 DPPH free radical, double quantum transit. 2=4247
 DPPH, gyromagnetic ratio apparent change in weak field, 4=17311
 DPPH, h. f. s. and coupling consts., from e. s. r. 3=14183
 DPPH—hydro peroxide solutions, e. s. r. 4=202
 DPPH, powder and solid, e. s. r. and double resonance, rel. to appd. fld. 4=28890
 DPPH, proton mag. reson., dielec. const. 1=14829
 DPPH radical, mag. exchange-lattice relax. theory 2=549
 DPPH solutions, dynamic polarization of nuclei 1=12311
 dark conductivity, temp. depend. 1=14388
 decaborane, electronic spectrum 2=14300
 n-decane- β , β' -dichloroethyl ether liquid mixture, opalescence, critical, light scattering 4=24212
 1, 10-decanediol, heats of combustion and formation 2=21585
 decanoic acid, aqueous soln., surface tension 2=1123
 decyl alcohol, aqueous soln., surface tension 2=1123
 n-decyl alcohol solns., dipole relaxation and association 4=5210
 deoxybenzoin, heats of combustion and formation 2=21585
 deoxyribonucleic acid, dielectric props. 0=6802
 deoxyribonucleic acid, irrad., free radicals, e. s. r. 1=9952
 deoxyribonucleic acids, molec. wt. det., methods compared 0=7822
 desoxyribonucleic acid, polycondensation 0=21276
 desoxyribonucleic acid, reduplication, solvent and nucleotide addn. 0=15794
 deuterated acenaphthene, soln. in solid pentane, luminescence spectra 1=17917

Organic compounds—contd

- deuterated naphthalene, soln. in solid pentane, luminescence spectra 1=17917
- deutero naphthalene in deutero durene, triplet state e.s.r. 3=1181
- deuteriochloroform, liq. and crystalline, Raman and i.r. spectra 4=10203
- deuterodiboranes, vibrational freq. calc., Average Rule and Complete Isotopic Rule 1=13996
- deuteroethane, molec. secondary isotope effects 2=20762
- deuteroethylenes, vibrational freq. calc., Average Rule and Complete Isotopic Rule 1=13996
- deuteromethane, liquid, viscosity 3=11762
- dextrose, charred, paramagnetic resonance standard 0=16159
- dextrose, charring study 0=3310
- n-di and N-phenylmethacrylamide, polymerisation, crystal shapes 4=15842
- 1,4-diacetobenzene, hindered rotation of acetyl groups 4=18212
- diamagnetism and mol. struct., 26 cpds. 4=28774
- diamine-quinone complexes, i. r. spectra 4=28242
- diamine-quinone complexes, optical absorpt. edges 4=26229
- diamines, and diammonium ions, Raman spectra, effects of ionization on C-H stretching freqs. 4=22403
- 1,b-diaminopyrene solid complexes, ionic components 4=13062
- diarylethyl acetates, reaction rates, det. 1=10293
- diazanaphthalene (1,4 and 1,5), e.s.r., N^{14} h.f.s. 3=8295
- diazenes, singlet-triplet transitions 2=6185
- diazines, $n \rightarrow \pi^*$ transitions, excitation transfer splitting 1=12292
- diazirine, infrared spectrum 4=17301
- diazirine, mass spectra and appearance potl. 3=24216
- diazocarbonyl cpds., mass spectra, ionization 4=1291
- diazomethane, gaseous, i. r. spectra 4=9756
- diazomethane, i. r. spectra, reassignment of molecular constants 4=10204
- diazomethane, mass spectra and appearance potl. 3=24216
- diazomethane, n. m. r., -50°C and scarcity of izodiazomethane 4=28260
- diazomethane, out-of-plane CH_2 bending 4=15365
- diazomethane, perpendicular bending modes meas. 4=1290
- diazomethane, photolysis in solid matrix, chemiluminescence of ethylene 0=13723
- diazomethane, vacuum u.v. absorpt. spectrum 4=22401
- dibenzene chromium mol., symmetry assessments 4=22389
- dibenzene chromium, u. v. spectrum of vapour 2=2003
- dibenzene vanadium, e. s. r. 2=12343
- dibenzenechromium cations, hyperfine interaction, mag. susceptibility 4=15383
- dibenzenechromium, molecular symmetry 3=729
- dibenzo-p-dioxin, radical, e.s.r., h.f.s., p and C^{13} 3=20017
- dibenzyl, frozen cryst. solns., absorpt. and emission spectra 4=10205
- dibenzyl, luminescence, effect of second impurity 2=16865
- dibenzyl-stilbene, absorption and luminescence, 4.2° and 20.4°K 4=17587
- dibenzyl-stilbene with naphthacene impurities, absorpt. and luminescence 2=6568
- dibenzyl-tolane with naphthacene impurities, absorpt. and luminesc. 2=6568
- 9,10-dibromanthracene in various solns., fluorescence displacement 2=7221
- α - ω dibromo alkanes, dielectric properties 1=12897
- 9,10-dibromoanthracene, first order triplet decay, rate consts. 3=3811
- p-dibromobenzene, Zeeman study, quadrupole resonance 0=8094
- dibromochlorofluoromethane (CBr_2ClF), vibrational spectrum, molecular and thermodynamic props. 0=4207
- dibromomethane (gaseous), multiple vibrational relaxation 1=12280
- dibromomethane, gaseous, multiple vibrational relaxation, u.s. study 0=14695
- 3,5-dibromo para-amino benzoic acid, crystal structure 3=13490
- α , ω -dibromoparaffins, dipole moments 1=12333
- 2,3-dibromopropionic acid, proton spin coupling consts. 3=736

Organic compounds—contd

- dibutyl phthalate, mol. dipole-dipole interaction, from dielectric relaxation 3=23897
- dibutylphthalate-water emulsion formation, disperse phase changes 4=7791
- dibutyl-phthalate-water emulsion, u.s. effect on particle size distrib. 4=13751
- dibutylphthalate/water mixtures, emulsification by ultrasonics 1=20774
- dicarboxylic acids, radical prod. by β rays, e.s.r. obs. 4=29234
- dichloroacetaldehyde, proton mag. resonance in molecules 2=10284
- 2:4- and 2:5-dichloroaniline, n.m.r. of vinyl group, calc. 0=1507
- 9,10-dichloroanthracene, sub-threshold photocurrents of high quantum yield 1=10062
- p-dichlorobenzene, Cl spin-lattice relaxation 0=4532
- p-dichlorobenzene, Cl^{35} n.m.r., T_1 temp. depend. 1=10195
- p-dichlorobenzene, Cl^{35} quadrupole resonance, solvent shifts 0=4589
- p-dichlorobenzene, $Cl^{35,37}$ nuclear quad. lines 2=9724
- p-dichlorobenzene, dynamic proton polarization 1=20273
- p-dichlorobenzene, irradiation effects 0=6282
- p-dichlorobenzene liquid state, u.s. velocity and compressibility 1=18406
- o-dichlorobenzene, n. m. r. spectra, high-resolution analysis by computer 2=14325
- p-dichlorobenzene, n. q. r., Cl^{35} spin-lattice relax. 2=8695
- p-dichlorobenzene, n. q. r., orientational melting processes 2=791, 8688
- p-dichlorobenzene, n. q. r., spin-lattice relax. 2=788
- n-dichlorobenzene, nuclear resonance, effect of electron bomb. 0=21088
- p-dichlorobenzene, planar normal vibrations, calc. 0=5910
- p-dichlorobenzene, nuclear quadrupole resonance 1=17350
- p-dichlorobenzene, quadrupole resonance, relax. time meas. 4=13356
- p-dichlorobenzene, Raman spectrum, wave numbers and intensities 0=14817
- p-dichlorobenzene, Raman spectra, temp. depend. 2=703
- p-dichlorobenzene single crystals, u. s. absorpt. meas. 4=20206
- p-dichlorobenzene, 6 solid solns. of, n. q. r. spectra 1=20281
- p-dichlorobenzene, u.s. velocity rel. to molecular parameters 1=18403
- p-dichlorobenzene, Zeeman quadrupole spectra 1=8857
- dichloroborane and dichloroborane-d i. r. spectrum 4=17302
- 1,2,1,2-dichlorodifluoroethane, internal rotation isomers 3=25082
- dichlorodifluoromethane, refrigerant, specification tests 0=5041
- 4,4'-dichlorodiphenyl sulphone, crystal and molec. structure 0=4659-60
- 1,2-dichloroethane, HOH n.m.r. second moment, exptl. verification of calc. 3=10538
- 1,2-dichloroethane-d, pure quadrupole resonance 3=8745
- 1,2-dichloroethane, solids, molecular motion 4=22477
- 1,2-dichloroethane, ultrasonic waveform distortion, det. of nonlinear parameters 1=4337
- dichloroethylenes, simple MO theory 2=6209
- dichlorofluorescein, effect of pressure on optical props. 1=20019
- dichlorofluoromethane, microwave spectrum 4=20080
- dichloromethane, i. r. spectra and force constants rel. to deuteration 2=12311
- 1,1-dichloro-2-propanone, Cl^{35} nuclear quad. resonance 2=3787
- 2,2-dichloropropane, nuclear quadrupole relaxation and its temp. dependence 3=25598
- 1,2-dichlorotetrafluoroethane, dielec. const. at 400 Mc/s dipole moment det. 0=5988
- 2,7-dichlorothianthrene, e.p.r., in conc. H_2SO_4 3=20013
- dichlorotoluenes, Raman, i. r. and luminescence spectra 1=14035
- dicyandiamide, electronic struct., config. and dimensions 4=20084
- dicyandiamide, solid, structure and H atom positions 4=23504
- dicyandiamide, 25 MeV X-irradiation 0=2679

Organic compounds—contd

- dicyclopentadienylberyllium, $(C_5H_5)_2Be$, molecular structure from electron-scattering data 4=22402
- dielectric absorption mechanisms, review 1=7683
- dielectric const., in intense elec. field 0=8663
- dielectric liquids, elec. cond., effect of H_2O impurity 0=19136
- dielectric liquids, irradiation effects, elec. cond. and related props. 4=27191
- dielectric permittivity of liquids, effect of electric field 4=14177
- 1, 3-dienic silicohydrocarbons, vibr. spectra and struct. 4=30458
- 2, 5-diethoxyquinone, n.m.r. spectrum, electron transfer effects 4=17313
- diethylamine liquid state, u.s. velocity and compressibility 1=18406
- diethyl amine, microwave absorption 0=19210
- diethylamine, u.s. velocity rel. to molecular parameters 1=18403
- diethylaniline, luminescence 2=6629
- 1, 2-diethylborane, i.r. spectra 0=20634
- diethyl ether, diffusion in NH_3 , 3=9492
- diethyl ether, heat transfer in nucleate boiling 4=27170
- diethyl ether, ion mobility, bubble chamber study 2=22182
- diethyl ether solutions of organic halides, photo-conductivity 0=19151
- diethyl ether, spectrum vacuum u.v. 4=3891
- diethyl ether, superheat, measurement 1=15850
- diethyl ketone- CCl_4 mixtures, photolysis 3=18455
- diethyl sulphate liquid state, u.s. velocity and compressibility 1=18406
- diethyl sulphate, u.s. velocity rel. to molecular parameters 1=18403
- 3, 3'-diethylthiocarbocyanin chloride, crystal structure model 4=10563
- 1, 1-difluorethylene, n.m.r. in gas phase 3=8298
- difluoroacetic acid, proton mag. res. study 1=12902
- 1, 2-difluorobenzene, thermodynamic props. and vibrational assignment 3=8291
- difluorodichloromethane, ionization and attachment coeff. 4=5551
- 1, 1-difluoroethane, sound dispersion 0=17737
- difluoroethylenes, microwave spectra and structures 3=17595
- diglycine barium chloride monohydrate single crystals, Raman spectrum 4=13063
- diglycine nitrate, crystal structure and phase transform. 4=7653
- diglycolic acid monohydrate, e.s.r. of γ -irrad. crystal 2=6689
- dihalogen acridines, luminescence meas. 2=13348
- dihalogen fluoresceins, luminescence meas. 2=13348
- 1, 3-dihaloidopropane type, dielec. saturation theory 2=3797
- 9, 10-dihydroacridine, luminescence 2=6629
- 9, 10-dihydroanthracene-anthracene, optical props. 2=18824
- 2, 7-dihydrodibenz- [c, e] oxepin and thiepin, n.m.r., temp. var., and inversion 4=22422
- 1, 8-dihydroxy anthraquinone, crystal structure 3=13491
- dihydrophenanthrenes, as scintillators, u.v. props. 0=16710
- dihydropyrazine cation radical, e.s.r. spectrum, isotropic hyperfine splittings, signs 4=25728
- dihydropyrazine, methyl substituted, and related radicals, e.s.r. 4=28256
- 6, 7-dihydroxynaphthalene-2-sulphonic acid metal chelates, Stokes shift rel. to stability const. 4=5194
- 2, 2'-dihydroxy-1, 1' naphthalidiazine, (liumogen), optical and physical props. 4=13099
- diketene, proton mag. res. spectrum 1=11121
- diketopiperazine (2, 5-piperazinedione), crystal structure 0=3251
- diketopiperazyl radical, spin densities from molecular orbital calcs. 4=1289
- 4, 4'-dimethoxyazoxybenzol, diel. and molecular props. 1=18425
- dimethyl acetylene as moderator for cold neutron sources 3=6010
- dimethyl benzene ion radicals, spin and charge densities, temp. depend. 3=25151
- dimethyl carbonate, decomposition on quartz, 147-257°C 1=12674
- dimethyl ether, microwave spectra and structure 3=17596

Organic compounds—contd

- dimethyl ether, pyrolysis 0=1949
- dimethyl ether, pyrolysis, HCl catalysis 4=2157
- dimethyl ether, pyrolysis, termination processes 2=15126
- dimethyl ether + SO_2 , HCl of fluoroform, association, from dielectric const. and density, press. var. 4=11258
- dimethyl ether, vac. u.v. spectrum 3=12851
- dimethyl ether, temp. dependence of vap. press., viscosity and heat of vapourization 0=5215
- dimethyl formamide, Raman spectra 2=7218
- dimethyl oxalate, critical properties 3=306
- dimethyl phosphine, spectrum, microwave, mol. structure and dipole moment 4=6620
- dimethyl styrene scintillators 0=19969
- dimethyl sulphate liquid state, u.s. velocity and compressibility 1=18406
- dimethyl sulphate, u.s. velocity rel. to molecular parameters 1=18403
- dimethyl sulphide, centrifugal correction to rot. 2=14257
- dimethyl sulphide, microwave spectrum and structure 1=9691
- dimethyl sulphide, microwave spectrum, structure and rotation barrier 0=20627
- dimethyl sulphide, torsional fine structure 3=2644
- dimethylacetylene, perpendicular vibrational bands, internal rotation fine structure, theory 4=25701
- dimethylacetylene, rotational-torsional energy levels 4=25612
- dimethylacetylene vapour, liq. and solid, far i.r. spectrum, internal rot. and symmetry evidence 4=28243
- dimethylamine, thermal cond., press. and temp. depend. 0=19202
- 3-dimethylamino-6-amino phthalimide, collision stabilization 2=14260
- p-dimethylaminobenzonitrile, adsorption 2=15097
- p-dimethylamino-p'-cyanostilbene, molecular moment, from luminescence, polarization 4=192
- N,N-dimethylaniline, C^{13} nuclear magnetic resonance 3=10544
- dimethylaniline, luminescence 2=6629
- dimethylaniline, photoionization, electron energy distrib. 1=16263
- dimethylaniline, photoionization, electron energy distrib. 1=18763
- 2, 6-, and 3, 5- dimethylanisole in benzene solution, dielectric relaxation, interpretation 4=18212
- dimethylbutanes, solid, proton resonance, methyl group reorientation 1=10197
- dimethylcyclohexanes, anomalous chem. shifts in proton mag. resonances 2=23001
- dimethylcyclopropane, deactivation, collisional transition probabilities 4=17324
- dimethyldiacetylene molecule, shrinkage effect by thermal vibrations 2=6124
- 1, 2-dimethylborane, i.r. spectra 0=20634
- dimethyl-9:10-dihydroanthracene-9:10-dicarboxylate, unit cells and space groups of cis and trans isomers 0=8243
- 2, 2'-dimethyldiphenyl ether; methyl and ring protons spin-spin interaction 3=2645
- 2, 2'-dimethyldiphenylether, proton resonance, molec. structure 1=12325
- dimethylinitramine, gas, thermal decomp. 2=10976
- 2, 6-dimethylnaphthalene in liquid He , fluorescence 2=18870
- 2, 6 dimethylnaphthalene molecules, vibration symmetry types 3=17605
- 1, 4-dimethylnaphthalene, nuclear quadrupole resonance in solid solution 1=20277
- 2, 6-dimethylnaphthalene solution, absorption and luminescence spectra 4=5188
- dimethylnaphtharhodine, fluorescence yield 1=12887
- 2, 5-dimethylpyrazine, in hydrocarbon and EPA glasses, solvent effects on $n \rightarrow \pi^*$ transitions 0=15742
- dimethylsiloxanes, self-diffusion 1=5273
- dimethylsulphoxide, $(CD_3)_2SO$, spectrum, rot., and bonds, moments 4=22404
- 3, 3-dimethyl-2-thiabutane, thermodynamic props. and barriers to rotation 2=3732
- 2, 7-dimethylthianthrene, e.p.r., in conc. H_2SO_4 3=20013
- dinitrobenzene anion radicals, e.s.r. linewidth alteration 3=4776
- dinitrobenzene ions, isomeric, e.s.r., nuclear coupling consts. 0=17776

Organic compounds—contd

- m-dinitrobenzene, signs of coupling consts., n.m.r. 4=3909
 o-and p-dinitrobenzene anions, e.s.r. spectra, linewidths 4=17310
 α -and γ -(2, 4-dinitrobenzyl) pyridine, flash photolysis 2=19160
 γ -(2, 4-dinitrobenzyl) pyridine, photochemistry 2=8925
 γ -(2, 4-dinitrobenzyl)-pyridine, photochromotropism 0=16381
 dinitrochlorobenzene, permittivity and dielectric losses in electric field 0=20950
 1,5-dinitronaphthalene, crystal structure 0=8232
 2,2-dinitropropane, gas, thermal decomp. 2=10977
 1,4-dinitrotetramethylbenzene anion radical, e.s.r. 3=2653
 dinitrotoluene, permittivity and dielectric losses in electric field 0=20950
 2-4-dinitrotoluene, photoisomerized, acid catal. of fading. 3=25836
 dioctyl phthalate aerosol droplets, light scattering 1=9486
 dioctyl phthalate aerosol droplets, light scattering 1=11844
 dioctyl phthalate, a charged aerosol, coagulation 4=4717
 dioctylphthalate, monodisperse aerosols, generator 0=10364
 diols, with branched chains, dielec. props. 3=21397
 dioxane addition rare earth hydrated perchlorates, crystal structure 3=20861
 p-dioxane, adsorption by Ge surfaces 0=12115
 dioxane, complex refractive index, below 5 mm 0=81
 dioxane in diethyl ether, solvent dielec. const. rel. to solute u.v. spectra 2=17440, 19550
 dioxane, effect on fluorescence of acetylanthracene in hexane 1=9400
 dioxane, luminescence 2=15609
 dioxane, N-H stretching freqs. 2=7219
 dioxane in phenol, C=O freq. 2=7218
 dioxane, transmission in far i.r. 2=5023
 dioxane, vac. u.v. absorption spectra 2=8104
 dioxane-water and dioxane-heavy water, dielec. props. rel. to molec. structure 4=18211
 dioxane-water mixtures, n.m.r. of added electrolytes 4=203
 dioxane-water system, light scatt. 2=13345
 diphenyl acceptor carbazole donor mixtures, e.p.r., in irradi. ether-ethanol glasses, 77°K 3=22595
 diphenylamine crystals, phase-changes, first-order, study using positron annihilation 4=23300
 diphenylamine, diffusion in CO₂, 32.3°C, 77 to 130.5 atm. 2=17502
 diphenylamine, free radicals, e.s.r. study 1=9951
 diphenylamine in frozen solutions, 77°K, e.s.r. of photo-oxidation products 4=7325
 diphenylamine, heat of fusion 4=5450
 diphenylamine, luminescence 2=6629
 diphenylamine, supercooled liquid, u.s. velocity discontinuity at melting point 1=12876
 diphenylanthracene/o-xylene solns, quenching and energy transfer 3=1702
 9,10-diphenylanthracene-polystyrene solid solution, fluorescence 0=20998
 9,10-diphenylanthracene, structural absorption and fluorescence 4=30452
 p-diphenylbenzene, crystal structure 2=827
 diphenylbenzidine, free radicals, e.s.r. study 1=9951
 diphenyl, in boric acid glasses, photo-ionization by u.v. 0=21290
 diphenyl-butadiene, frozen cryst. solns., absorpt. and emission spectra 4=10205
 diphenylbutadiene mxd. with light gas, intermolec. interact. rel. to temp. 2=16567
 1,4-diphenylbutadiene-1,3, structural absorption and fluorescence 4=30452
 diphenyl, chlorinated (Aroclor 1260), dielec. relaxation, press. depend. 0=16702
 diphenyl cpds., in benzene, CCl₄ and heptane, microwave absorption 0=19149
 diphenyl cpds., in benzene soln. dielect. absorption 2=11382
 diphenyl, crystal growth 2=4386
 diphenyl decapentene, Raman spectrum rel. to excited state lifetime 4=6621

Organic compounds—contd

- diphenyldiazomethane in benzophenone, solid soln., e.s.r., triplet state, 77°K 3=4775
 diphenyl, diphenyl oxide, counter scintillation efficiency 4=3240
 diphenyl-diphenyl oxide, as reactor moderator and coolant 0=5825
 diphenyl-dipicrylhydrazyl, elec. cond. in benzene soln. 4=27196
 diphenyl dodecapentene, Raman spectrum rel. to excited state lifetime 4=6621
 diphenyl, electron transitions, branched electron gas model 4=1292
 diphenylene oxide, scintillation light yield for α and β -rays 4=13093
 diphenyl ether, dielectric relaxation and molecular structure 1=14113
 diphenyl ethers, relaxation mechanism 4=12422
 diphenylether, normal and supercooled, u.s. velocity, temp. depend. 0=6789
 diphenylether and similar molecules, anomalous dielectric relaxation 0=16700
 diphenylethers, mol. struct. by n.m.r., correction 3=10546
 diphenylethers, proton resonance, molec. structure 1=1325
 diphenyl hexachloride, viscoelasticity 2=1146
 diphenyl iodonium nitrate, use in photog. development 0=12756
 diphenyl liquid state, u.s. velocity and compressibility 1=18406
 diphenyl, melting, 45° change in angle between ring planes, Raman spectrum 4=6635
 diphenyl metachloride, relaxation data from pressure generator meas. 0=3586
 diphenyl, neutron age 0=12979
 diphenyl, neutron diffusion 3=2271
 diphenyl, neutron diffusion parameters 4=3758
 diphenyl, neutron inelastic scattering investigation, 20°C 4=5153
 diphenyl, neutron thermal diffusion 2=9857
 diphenyl, neutron total cross-section of H, meas. 4=28238
 2,5-diphenyl-1,3-oxazole, fluorescence quantum yields 0=16098
 2,5-diphenyloxazole (PPO) scintillation solutions 1=4347
 diphenyloxazole soln. in cyclohexane, fluorescence 2=7223
 2,5-diphenyloxazole solns., luminescence 3=1701
 2,5-diphenyloxazole, transient dimer formation 1=8131
 2,5-diphenyl-1,3,4-oxdiazole, fluorescence quantum yields 0=16098
 diphenyloxazole in xylene soln., energy transfer 0=19161
 $\alpha\alpha$ -diphenyl- β -picryl-hydrazyl, antiferromagnetism 4=4390
 diphenyl picryl hydrazil, n.m.r., double, solid and in benzene solutions 4=1904
 diphenylpicrylhydrazyl, BDPA and Wurster's blue, e.s.r. relaxation times 0=3123
 1,1-diphenyl-2-picrylhydrazyl (DPPH), e.s.r., g-tensor 2=14828
 diphenylpicrylhydrazyl, dynamic proton polarization 0=4534
 diphenylpicrylhydrazyl, e.s.r. 0=16178
 α,α -diphenyl- β -picryl hydrazine, e.s.r. absorpt. 3=15371
 diphenylpicrylhydrazyl free radical, multiquantum transitions in radio wave region 4=25604
 diphenylpicrylhydrazyl, e.s.r. line at r.f. at liq. H temp. 0=10225
 diphenylpicrylhydrazyl, e.s.r. lines, moments 0=12671
 diphenyl picryl hydrazil, e.s.r. line width, effect of external mag. field, 12-53 500 Mc/s 1=1271
 diphenylpicrylhydrazyl, e.s.r. and n.m.r. at 4°K 0=15773
 diphenylpicrylhydrazyl, partial microwave saturation, susceptibility along polarizing field 0=16179
 diphenylpicrylhydrazyl, proton hyperfine spectra 0=10680
 diphenyl picryl hydrazyl, proton polarization by electron resonance saturation 1=10196
 diphenylpicrylhydrazyl, proton resonance, spin densities 0=17778
 diphenylpicrylhydrazil radical, mag. susceptibility, 294°-1.2°K, Curie constants 4=10250
 $\alpha\alpha$ -diphenyl- β -picrylhydrazyl, relax. time var. down to 1.5°K 4=30730

Organic compounds—contd

- diphenylpicrylhydrazyl, e.s.r., r.f. susceptibility along polarizing field 0=16179
- diphenyl-picryl-hydrazyl solns., ordinary and super-cooled glassy solid, e.s.r. 4=2710
- 1,1-diphenyl-2-picrylhydrazyl, spin-lattice relax. 4=28884
- diphenyl picryl hydrazyl, spin-spin relaxation, field depend. 1=882
- diphenylpicrylhydrazyl, e.s.r. study of hyperfine interactions in single crystals of the hydrazine 0=13881
- diphenylpicrylhydrazyls, substituted, e.s.r. 4=15377
- diphenylpolyenes, frozen cryst. solns., absorpt. and emission spectra 4=10205
- 1,3-diphenyl-1,3-propanedione, heats of combustion and formation 2=21585
- diphenyl, in sat. hydrocarbon phosphorescence, 77°K 4=20499
- diphenyl, scintillation light yield for α and β -rays 4=13093
- diphenyl in solns., phosphoresc. meas. 4=11206
- diphenyl, thermal neutron diffusion 1=13445
- diphenyl, u.s. velocity rel. to molecular parameters 1=18403
- 2,2'-dipyridyl anion, e.s.r., h.f.s., effect of reducing agent 3=20020
- dipyridyl complexes, Eu (III), Sm (III), Tb (III) and Dy (III), fluorescence 4=20501
- $\gamma\gamma$ -dipyridyl, e.s.r., N^1 h.f.s. 3=8295
- $\gamma\gamma$ -dipyridil, ions, spin density and hyperfine coupling 2=22995
- 2,2'-dipyridyl-Na complex, e.s.r. spectrum 2=20862
- di-p-xylylene, structure, thermal expansion and molec. vibrations 0=8248
- diquinone anion e.s.r. 4=28257
- discharges, electric, in vapours, Townsend, effect of space charge on current growth 3=21756
- disubstituted benzenes, high-resolution n.m.r. 3=8301
- disubstituted benzenes, proton n.m.r. 3=4779
- 1,2-disubstituted ethanes, A_2B_2 n.m.r. spectra, analysis 4=17314
- disubstituted nitric oxides in benzene soln., ESR spectra 2=2733
- 1,2-disubstituted propanes, n.m.r. studies 4=28266
- disubstituted 3-cyano, 2,5-pyrrolidiones and derivatives, i.r. spectra and vibr. 4=15603
- distyrylbenzene derivatives, scintillation props., absorpt. and fluorescence 4=18209
- disulphides, meas. of appearance pot. prod. by electron impact 4=8623
- di-tertiary butyl peroxide, gas phase HCl-catalysed decomp. 3=5164
- di-tetramethyl ammonium uranium hexachloride, vibrations, space-group theory calc. 3=8343
- dithiocarbamate complexes with metals, i.r. spectra, normal coordinate analysis 3=25120
- ditoluenechromium cations, hyperfine interaction, mag. susceptibility 4=15383
- divinylamine, improved LCAO method 3=4774
- djenkolic acid, formation of S radicals by irradiation 2=6231
- dodecane, liquid, PVT relations 1=8108
- dodecylpyridinium iodide-KI solution, scattering of light 1=4477
- durene, absorption and luminescence spectra 2=12594
- durene, green fluorescence, polarization 3=23114
- durene, growth from melt 4=17784
- durene, luminescence, lifetime var. solvent 4=20496
- durene, luminescences, true and parasitic 4=13098
- durene, naphthalene-doped, phosphoresc. 3=15712
- durene, phosphorescence at low temp. 3=13211
- durene, in solid phase, triplet-singlet luminesc. 4=13097
- dye mols., colour rel. to polarizability 2=14345
- dye photoconductors, e.s.r. 3=23021
- dye-polyelectrolyte complex, colour change by elec. field 3=3804
- dye sensitization of photoconductivity 1=17798
- dye sensitization of photoconductivity of CdS 1=17797
- dye solns., luminescence and absorpt. spectra diff. 4=14171
- dye solution, primary and secondary fluorescence 1=8126-7
- dye solutions, adsorption effects on reflection spectrum 4=16119
- dye solutions, luminescence quenching and absorption spectra 1=15891

Organic compounds—contd

- dyes, absorption spectrum, effect of weak coupling between chromophores 2=22985
- dyes adsorbed on cellophane, absorpt. anisotropy 3=20492
- dyes adsorbed on light scattering materials, spectra 3=21515
- dyes, azo, assignment of electronic transitions 2=6186
- dyes, cationic, dark conductivity 3=25416
- dyes, colour shift by electric field 1=6004
- dyes, condenser photoeffect, effect on, in Ge and Cu_2O 2=8437
- dyes, crystal structure rel. to deposition 2=6815
- dyes, dark conductivity, temp. depend. 1=14388
- dyes dissolved in polyvinyl alcohols, luminescence 3=7213
- dyes, e.s.r. spectra 3=15936
- dyes, effect of light on contact potential 0=1626
- dyes, electronic spectra, temp. depend. 2=14291
- dyes, external photo-effect 2=5371, 11695
- dyes in films, double refraction, on polarized light irradi. 4=17586
- dyes, films and solns., absorpt. spectra osc. strengths, luminescence quenching and spectra overlap 4=11200
- dyes, fluorescence quantum yield and absorption decay time 0=11772
- dyes, fluorescent polarization spectrum, fine structure 4=27185
- dyes, frozen aq. solns., concentration profiles 0=6048
- dyes, luminescence, metastable states 0=3537
- dyes, luminescence, quenching, dipole moment intermol. interaction 4=22442
- dyes, mol. transits., polariz. meas. 2=10277
- dyes, optical, sensitization of semiconds. 2=6488
- dyes, photocond., effect of H_2 0=1685
- dyes, photoconductivity theory 2=6492
- dyes, props. of photographic sensitizers 0=10358
- dyes, resonance Raman spectroscopy 0=7765
- dyes, in rigid media, delayed fluorescence 4=1789
- dyes, sensitization of photoconductivity in glass 0=20926
- dyes, solid films, photoelec. emission, freq. depend. 0=17028
- dyes, solid films, photo-emission 1=5491
- dyes in soln., luminescence 3=11800
- dyes, in spectral sensitization of photographic materials 3=11950
- dyes, triphenylmethane, paramagnetic resonance 1=5072
- e.s.r. in glassy solns. 4=7198
- e.s.r. studies, tritium as an internal radiation source 1=12307
- egg albumin, paramagnetic resonance and semiconductor theory 1=11115
- 8-cicosanol, proton resonance, rel. to dielec. relaxation 0=13894
- electroluminescence, d.c., of solid and liquid phosphors 4=20495
- entropy of melting, classification 2=10306
- eosin, B,6G, in polymethyl methacrylate, fluorescence polarization 3=15713
- eosin-phenol system, flash photolysis 0=4725
- eosin, photoluminescence quenching 1=12886
- eosin, solutions in collodion and glucose, fluorescence yield 1=1179
- eosin, spectra of solns. in mono- and PMMA 2=9281
- eosin, spectrum, influence of solvent mixture of MAM or ethanol 3=21378
- eosin, yellow, in glycerine and polymethyl methacrylate, reflection symmetry 2=19566
- eosin, in ZnO, sensitization of photoconduction 4=15570
- epichlorohydrin, n.m.r., spin-spin coupling 1=19662
- epoxide resins as vacuum-tight materials 2=21958
- epoxide splitting, base catalysis mechanism 3=20997
- epoxides, substituted, spin-spin coupling rel. to electronegativity 4=28262
- epoxy resin, as cement for cryogenic apparatus 1=11867
- epoxy resin, n.m.r. of water content 3=6768
- epoxy resin, thermal boundary resist. with liq. He^3 below 1°K 4=27404
- epoxy resins, elec. breakdown 1=17850
- epoxy resins, replica mirror production 0=19389
- epoxy-reson joints for high-vacuum tubes 0=10705
- equations of state, virial coeffs., and intermolecular forces 3=25154
- erbium ethyl sulphate, spectrum, absorpt. 4=10173
- esculin, phosphorescence, anti-Stokes 1=6235

Organic compounds—contd

- ester—urea inclusion cpds., X-ray produced free radicals 4=28277
 esters, adiabatic compressibility, u.s. vel. 3=11795
 esters, decomposition, criticism 3=25822
 esters, formate, in mass spectra, H_3O^+ formation in mass spectra 4=9780
 esters, liquid, 24, absorption of acoustic waves, u.s., var. with freq. (3-20 Mc/s) and temp. 3=14159
 esters, Raman spectra intensities 1=14033
 esters, Raman spectra, relative line intensities 0=85
 ethane, adsorption on Ir 2=15099
 ethane ($C^{13}C^{12}H_6$), $\nu_2 + \nu_6$ band 3=20007
 ethane, C^{13} -H and H-H nuclear spin coupling 1=17346
 ethane- d_6 , Raman spectrum analysis 3=4765
 ethane, diffusion of ethylene, acetylene and self, meas. 4=11238
 ethane, diffusion in polyethylene 4=28481
 ethane, electro-optical parameters rel. to dipole moments 4=15367-9
 ethane, electron inelastic scattering 4=12394
 ethane and ethane- d_6 , i.r. spectrum and c-c bond length 0=1513
 ethane, ethyl, chemical decomposition 4=26752
 ethane—ethylene gas mixtures, u.s. dispersion 2=2773
 ethane, H^{+2+} ions interact. energies 2=12354
 ethane, hexadeuteroethane, Raman spectra, electro-optical, depolariz. consts., calc. 4=25702
 ethane, int. rot. rel. to steric repulsion of H atoms 2=1978
 ethane, internal rotation barrier calc. 4=1293
 ethane, internal rotation barrier, valence bond calc. 0=4185
 ethane, ion—molecule reactions 4=11538
 ethane, ionization by ions of 200-1200 keV energies 4=27488
 ethane, liquid, proton spin—lattice relaxation 3=18835
 ethane, liquid, self-diffusion and proton relax. 2=21924
 ethane, microwave absorption in compound gas 2=13380
 ethane, molec. secondary isotope effects 2=20762
 ethane, molecular beam techniques 0=2758
 ethane molecular, classical calc. 3=20008
 ethane, molecular parameters 3=4766
 ethane, molecular yields in radiolysis 0=16385
 ethane, oxygen explosions, within gas boundary 2=4542
 ethane, photochemistry at wavelengths below 900Å 3=13618
 ethane, photochlorination, isotope effect 3=11356
 ethane, photoionization, continuous absorpt., and fluorescence 4=25690
 ethane, photolysis at low conversions 4=13740
 ethane, pure and with O_2 , proton spin—lattice relax. 1=18476
 ethane-1, 1, 1- d_3 , radiolysis 2=15160
 ethane, radiolysis, e.s.r. obs. of ethyl radical concn. 0=18439
 ethane, reaction with T_2 , mechanism 0=745
 ethane, solid, vacuum photolysis at 77°K 2=19154
 ethane, sound dispersion 0=17737
 ethane, structure, rel. to rotational Raman spectra 2=10260
 ethane, substituted, proton—proton coupling const. in H-C-C'-H' bonds, temp. depend. 0=17784
 ethane, thermodynamic props. 0=1064
 ethane, transport props. meas., rotational relax. 4=5241
 ethane-type mols., perpendicular vibrational bands, internal rotation fine structure, theory 4=25701
 ethane, u.v. photolysis 1=6573
 ethane, unimolec. decomp. 0=8302
 ethane vapour, u.v. absorption and ionization cross-sections, 9-25 eV 3=1932
 ethane, vibrationally-excited, decomposition 2=14335
 ethanes, deuterated, vapour press. 4=24440
 ethanes, geminal HH coupling constants 3=8294
 ethanes, substituted, n.m.r. study of conformational equilibria 2=16562
 ethanes, substituted, u.s. relaxation, rotational isomerism, -70°C to +100°C, 10-110 Mc/s 0=19125
 ethanol—A mixtures, in proportional counters 0=12722
 ethanol adsorbed on Al_2O_3 surfaces, i.r. spectral study 3=3362
 ethanol, dissociation 3=12870
 ethanol, with dissolved water, dielectric const., 2.1 mm 4=2703
 ethanol—argon filling for Geiger counters 1=13186

Organic compounds—contd

- ethanol, effect on fluorescence of acetylanthracene in hexane 1=9400
 ethanol glass, e.s.r. of irradiation-induced electrons trapped at 77°K 4=4399
 ethanol, with KI, u.s. vel. and compressibility 1=11759
 ethanol, paramagnetic resonance 1=15907
 ethanol, proton-transfer ion—molecule reactions 4=23623
 ethanolamine complexes, mono-, di- and tri-, of Fe, Ni, and Cu, dichroism 0=13693
 ethylene vapour ionization, isotope effect in energy transfer from metastable noble-gas atom 4=29866
 ethene, isotopically substituted, zero-point energy 3=12794
 ether, compressibility, temp. depend., X-ray study 3=21322
 ether—acetic acid soln./water, interface mixing zone, non-stationary effects 0=19085
 ether, cyclic, fluorinated, electron attachment 0=5273
 ether, electron avalanches, carrier multiplication 0=2349
 ether, fluctuational formations, temp. depend., 4=24169
 ether, liquid, lack of orientational ordering 1=11747
 ether mols., adsorpt. on Ge, effect on recomb. centres parameters 4=20361
 ether solutions of K metal and naphthalene dianion, flash photolysis 3=16180
 ether solutions, photocond., red edge 2=17482
 ethers, CH vibr. spectra and harmonics, perturbation by free orbitals of O 4=3882
 n-ethers, thermal cond. meas., -100° — +200°C 4=24204
 ethers, vinyl alkyl, vib. spectra, theory 2=16548
 ethyl acetate, absorption and diffraction of ultrasonics 1=2823
 ethyl acetate, light scatt., absolute intensity, exper. determ. 4=24211
 ethyl acetate, rotational isomeric relax. 4=178
 ethyl acetate, u.s. absorption 0=6788
 ethyl acetate, u.s. velocity and absorption coeff. 0=8652
 ethyl acetate—water system, boiling 2=19785
 ethyl acetylene, proton resonance, proton—proton coupling consts. 0=17783
 ethyl acrylate, γ -ray induced polymerization 0=1516
 ethyl acrylate NMR, spectra analysis 1=20254
 ethyl adipate, dielec. relaxation, effect of temp. 0=5022
 ethyl adipate, dielectric relaxation 0=19145
 ethyl alcohol, acoustic streaming, viscosity ratio 0=6880
 ethyl alcohol, α -particle stopping power 2=326
 ethyl alcohol, aq., viscosity, steps in intermolecular activation energy 1=15781
 ethyl alcohol, b.p. and strong elec. field 2=7472
 ethyl alcohol, catalytic action of LiF rel. to dislocations 4=6841
 ethyl alcohol, cavitation erosion, dependence on dissolved gases 1=10489
 ethyl alcohol, critical heat load at boiling 2=15818
 ethyl alcohol—cyclohexane, dielec. relax. 2=13351
 ethyl alcohol, deuterated, specific heat 2=13324
 ethyl alcohol, dielec. const. near critical temp. 2=19575
 ethyl alcohol for diffractive light modulator 0=12494
 ethyl alcohol, dispersion at mm wavelengths rel. to dielec. props. 3=1706
 ethyl alcohol, entropy of boiling, calc. 1=8265
 ethyl alcohol, fog droplets growth and condensation coeffs. 4=5467
 ethyl alcohol, frozen aq. soln., concentration profiles 0=6048
 ethyl alcohol, n.m.r. of proton complexes at -75°C 1=11767
 ethyl alcohol—NaI system, elec. cond. near critical temp. 2=17481
 ethyl alcohol, nuclear magnetic resonance 1=5287
 ethyl alcohol, O_2 absorption spectra 2=5020
 ethyl alcohol, Raman spectra 2=8099
 ethyl alcohol, scattering of neutrons 0=12940
 ethyl alcohol, sound velocity meas. 4=8206
 ethyl alcohol, sound velocity, temp. coeffs. 4=8207
 ethyl alcohol, spectrum, 20.7-31.7 kMc/s, dipole moment 3=20002
 ethyl alcohol, surface tension 0=14613
 ethyl alcohol, trapped Au e.s.r., liq. N, temp. 4=13317
 ethyl alcohol, u.s. absorption 2=15707
 ethyl alcohol, ultrasonic waveform distortion, det. of nonlinear parameters 1=4337

Organic compounds—contd

- ethyl alcohol-water mixtures, heat and mass transfer 2=15768
 ethyl alcohol-water mixtures, u.s. relax. 2=53
 ethyl ammonium ions, proton spectra rel to long-range N^{14} coupling 3=12864
 ethyl anisol p-amimocinnamate, polymesomorphic, dielec. loss at 1.2 cm 0=5018
 ethyl p-azoxybenzoate, liquid crystals, structure rel. to u.s. waves 3=18798
 ethyl p-azoxycinnamate, liquid crystals, structure rel. to u.s. waves 3=18798
 ethyl benzene, nuclear spin-lattice relax. meas. 3=23912
 ethyl benzene, relaxation time at 8.7 mm 0=18090
 ethyl benzoate, dielec. dispersion, at 1000, 2000 and 9200 Mc/s 1=1748
 ethyl benzoate, mol. dipole-dipole interaction, from dielectric relaxation 3=23897
 ethyl bromide, catalysis from ethylene + HBr, by Co^{80} 4=10650
 ethyl bromide, γ -irrad., e.s.r. 2=8125
 ethyl bromide, superheat, measurement 1=15850
 ethyl bromide, u.v. absorption in gas and solid 1=855
 ethyl butyl ketone, relaxation time at 3 cm 1=6870
 ethyl chloride, adsorbed on porous Vycor glass 2=2779
 ethyl chloride adsorbed on Vycor glass, complex dielec. constant 1=9423
 ethyl chloride, adsorption of activated C 4=23553
 ethyl chloride, dielectric dispersion 0=14696
 ethyl chloride-hydrogen, thermal diffusion, 300-480°K 0=959
 ethyl chloride, press. dependence of microwave absorption 0=5920
 ethyl chloride, thermal cond., press. and temp. dependence 0=19202
 ethyl chloride, unimolecular decomp. 0=8302
 ethyl cinnamate, dielec. dispersion, at 1000, 2000 and 9200 Mc/s 1=1748
 ethyl cyanide, r.f. spectrum and internal rotation 0=4211
 ethyl cyanide sources at 0.34 mm wavelength 4=24904
 ethyl-d₁ radicals, decomposition 4=10639
 ethyl-d₃ chem. activated radicals, decomposition 3=11347
 ethyl-d₃ radicals, excited vibr., collisional deactivation by D₂, He 4=22441
 ethyl esters in α -phase, dielectric absorption, anomalous behaviour 4=10102
 ethyl ether, critical state, study in Tepler's apparatus 1=13020
 ethyl ether, density, near critical state, γ -absorption study 1=13027
 ethyl ether, of ethylene glycol, in water, light scatt., 4=24214
 ethyl ethers, i.r. spectra, effect of substitutes 2=22987
 ethyl fluoride, for i.r. spectrum, barrier to internal rotation 3=25121
 ethyl formate, microwave absorption 0=19210
 ethyl glycol, elec. strength, under pulse conditions 4=27188
 ethyl iodide, microwave spectrum 1=7463
 ethyl iodide, microwave spectrum 1=9928
 ethyl iodide, microwave spectrum, rotational consts. 1=838
 ethyl iodide, pyrolysis 3=6915
 ethyl iodide, reaction with HI 3=20978
 ethyl iodide, u.v. absorption in gas and solid 1=855
 ethyl lactate, dielec. dispersion, at cm wavelength 1=1749
 ethyl malonate, n.m.r., CH_2 proton line-width, effect of adding piperidine and its benzoate 4=208
 ethyl mercaptan, proton resonance, proton-proton coupling consts. 0=17783
 ethyl methacrylate, u.s. velocity rel. to molecular parameters 1=18403
 ethyl $NH_2B_2H_4NH$ ethyl, crystal and mol. structure 4=2096
 ethyl phosphate liquid state, u.s. velocity and compressibility 1=18406
 ethyl phosphate, n.m.r., in earth's field 3=20021
 ethyl phthalate, dielectric relaxation 0=19145
 ethyl radicals, reaction kinetics in liq. ethane 4=25721
 ethyl radicals, reactions with I atoms 3=8972
 ethyl-d radicals, unimolecular decomposition 3=18154
 ethyl stearate and behenate, dielectric absorpt., two position model 4=12965

Organic compounds—contd

- ethyl stearate, crystalline transitions and mechanical dispersion 0=6299
 ethyl stearate, dielec. const. and crystal structure 0=13647
 ethyl stearate-heneicosane mixtures, dielec. const. and relaxation theory 0=13647-8
 ethyl sulphate crystals, Nd^{3+} ions in, harmonic cross relaxation 2=10707
 ethyl sulphates, electron spin resonance 0=3124
 ethyl sulphates, nuclear orientation 1=14153
 ethyl sulphuric acid, rotativity 1=12880
 N-ethylacridone, triplet states study by luminescence and e.s.r. 3=962
 o-ethylaniline vapour, near u.v. absorpt. spectrum 4=17303
 ethylbenzene, multiple proton mag. resonance relaxation 1=15910
 ethyl-9-bromo 10-anthracene, crystal structure 0=8233
 ethylenediamine, N^{14} nuclear quad. reson. 2=18487
 ethylene acid, and D-substitution product, electro-optical parameters 3=15366
 ethylene, adsorption on Ir 2=15099
 ethylene alcohol derivs., free ν (OH) vibrations 2=1985
 ethylene, α -radiolysis 0=8321
 ethylene and C_2D_4 , absolute i.r. intensities of cryst. 3=6656
 ethylene and C_2D_4 , acoustic dispersion, catalysis of energy transfer 1=19675
 ethylene, and C_2D_4 , i.r. spectra of crystals 2=14686
 ethylene, C^{13} or D substit., proton reson. 2=16561
 ethylene, C^{13} -H and H-H nuclear spin coupling 1=17346
 ethylene, chemiluminescence, from photolysis of diazomethane in solid matrix 0=13723
 ethylene chloride, ratio of gauche to trans. form in soln. 0=2770
 ethylene, crystal struct. 2=15040
 ethylene diamine copper (II) nitrate, e.s.r. 3=8706
 ethylene, diffusion of Kr^{85} in dense gas 3=1720
 ethylene, diffusion of N_2 , ethane and self, meas. 4=11238
 ethylene, electron density distrib. 2=20849
 ethylene, electron impact spectra 4=6520
 ethylene, electron inelastic scattering 4=12394
 ethylene, electron-pair bond, time-dependent Hartree-fock theory 4=20026
 ethylene, electron transport, time-of-flight meas. 3=23940
 ethylene, excit. of molec. vibr. modes 2=6140
 ethylene, force parameters, calc. using exp. 6-8 model 0=1515
 ethylene, γ -radiolysis 2=2453
 ethylene glycol, deuterated, specific heat 2=13324
 ethylene glycol dinitrate, boiling pt. lowering on thermal decomposition 2=2450
 ethylene glycol, frozen aq. solution, concentration profiles 0=6048
 ethylene glycol mono-isobutyl ether, critical solution in water 1=2754
 ethylene glycol, mutual potential energy of molecules, periodic discontinuities 1=4324
 ethylene glycol, sonoluminescence 0=2178
 ethylene glycol, sonoluminescence and cavitation bubble implosions 2=19571
 ethylene glycol synthesis in chemonuclear reactions 1=11056
 ethylene glycol, viscosity 0=19045
 ethylene glycol, viscous flow, intermolec. activation energy 2=15567
 ethylene, Hg-photosensitized reaction at high temp. 3=8970
 ethylene, i.r. spectrum, Coriolis perturbations 4=20081
 ethylene, interaction between two molecules 2=6236
 ethylene-iodine system, thermodynamics 2=17080
 ethylene, ionization by α -rays, energy depend. of W 1=8310
 ethylene, ionization by ions of 200-1200 keV energies 4=27488
 ethylene, ionization by Po α -particles 0=19613
 ethylene, isotopically substituted, zero-point energy 3=12794
 α -ethylene ketones, i.r. absorption 4=3892
 ethylene, lowest triplet states 1=850
 ethylene, microwave absorption in compressed gas 2=13380
 ethylene, molecular convex-core model 1=14142
 ethylene, molecular π electron states, calc., analogue 4=9757
 ethylene, molecular yields in radiolysis 0=16385
 ethylene, non-empirical MO calcs 0=5971

Organic compounds—contd

- ethylene, ν_s vibration mode 1=7467
 ethylene, orbital calc. of $^3B_{1u}$ and $^1B_{1u}$ states 0=13452
 ethylene oxide, first addition to phenol, base catalysis mechanism 3=20997
 ethylene oxide hydrate, Structure I, dielectric absorption 4=22771
 ethylene oxide, pyrolysis, hot molecule reaction 4=13722
 ethylene oxide, thermal cond., press. and temp. depend. 0=19202
 ethylene-oxygen flame, electron temp., near to gas temp. 4=16274
 ethylene, Pariser—Parr theory, transition band-widths 4=25703
 ethylene, photochemistry at wavelengths below 900 Å 3=13618
 ethylene, photoionization, continuous absorpt., and fluorescence 4=25690
 ethylene, photolysis 1=12681
 ethylene, photolysis 2=4549
 ethylene, planar vibr., perturb. analysis 4=25709
 ethylene, polarizability, effect of π -electron electrostatic interaction 0=20652
 1-2-di-(1-naphthyl)-ethylene, in polystyrene, γ -scintillation yield 2=2258
 ethylene, potential function calc. 3=4767
 ethylene, pure and with O_2 , proton spin-lattice relax. 1=18476
 ethylene, reaction with methyl radicals 0=746
 ethylene, reaction with T_2 , initiation by T decay 0=3321
 ethylene-SF₆, vibration energy transfer 3=6434
 ethylene, slow electron diffusion meas. 2=13381
 ethylene, solid-state vibr. spectra 2=2237
 ethylene, spectrum meas., by electron scatt., agreement with u. v. 4=3828
 ethylene, split p-orbital calc. method 2=10268
 ethylene, thermal relaxation absorption 0=19209
 ethylene, transfer of vibrational energy 0=7817
 ethylene, transport props. meas., rotational relax. 4=5241
 ethylene vapour, u. v. absorption and ionization cross-sections, 9-25 eV 3=1932
 ethylene, variational calc. 2=3772
 ethylene, viscothermal and thermal relaxation 4=24271
 ethylene-water vapour mix., electron trapping 2=22170
 ethylenes, fluorinated, force consts. calc. 4=30459
 ethylenes, isotopic effects on vapour pressures 4=5151
 ethylenes, monosubstituted, spin-spin coupling constants 1=17347
 ethylenes, subst. n.m.r., C¹³-H spin-spin couplings 3=10547
 ethylenes, substituted, proton n.m.r. shifts 1=7489
 ethylenediamine complexes of Cu(II)SO₄, e. s. r. 4=4401
 ethylenediamine, solvated electrons and water reaction rates 4=7746
 ethylenediaminetetra-acetic acid complex ions, thermodynamics of formation 0=21277
 ethylenediammonium sulphate, crystal structure 1=15112
 α -ethylenic ketones, aliphatic, magnetic rotation and electronic structure 4=15366
 ethylenic mol. exciton trapping when coupled with nuclear vibr. 4=20127
 ethylmethacrylate liquid state, u. s. velocity and compressibility 1=18406
 ethylsulphate:Ce, Pr, Pr spectrum and Zeeman effect 1=1164
 ethylvinylketone, proton mag. res. spectra 3=2657
 ethynyl free radical, e. s. r. meas. 4=12532
 europium benzoylacetate in polymethylmethacrylate, luminescence, as in pure crystal 4=10233
 europium benzoylacetate soln., fluorescence spectrum 4=30461
 europium dibenzoylmethide and Lewis base complexes, luminescence 4=22934
 excess-kinetic energy ions, in mass spectra 4=18688
 excimers, luminescence due to 2-stage charge transfer 4=21141
 factor V 1a (aquo cyanide of vitamin B₁₂ nucleus), crystal structure 4=23505
 n-fatty acid liqs., thermal cond. meas., -100° — + 200°C 4=24204
 fatty acids, adsorption and dislocation locking in LiF 2=23182

Organic compounds—contd

- fatty acids, aq., LiF soln. and etching 2=12886
 fatty acids, solid, 700-900 cm⁻¹ absorption spectra 1=17901
 fatty and perfluoro-acids, long-chain, as etchants 2=8229
 ferric acetylacetonate, spectrum changes on addition to polyacene solutions 3=15359
 ferric acetylacetonate, zero-field energy levels 3=23228
 ferrihaemoglobin derivatives, e. s. r., MO calc. of bonding 1=873
 ferrocene, cond., elec., dark and photo- 4=17532
 ferrocene derivatives, Fe⁵⁷ Mössbauer effect 3=15425
 ferrocene derivatives, Mössbauer effect of Fe⁵⁷, substituent effects 4=22466
 ferrocene, electronic spectra 2=6183
 ferrocene and ferricinium cation, γ -ray absorption 2=3773
 ferrocene, hole drift mobility, meas. by photoconductivity method 4=26154
 ferrocene and related cpds, covalent bonds, Mössbauer study 4=12585
 ferrocene, rotational-torsional energy levels 4=25612
 films, optical props. rel. to structure 4=1702
 films, solid, refractive index, rel. to struct. 4=10200
 films, thin, optical props., rel. to structure 4=4241
 fish-glue, nuclear relaxation processes 1=12900
 fluorocarbon metallic cpds., F¹⁹ mag. resonance 2=2021
 fluorene, absorpt. and fluorenc. spectra at 4°K 2=18826
 fluorene in biphenyl fluorene, triplet state e. s. r. 3=1181
 fluorene, in heptane and hexane, phosphoresc. 4=11205
 fluorene, luminescence 2=6629
 fluorene, scintillation light yield for α and β -rays 4=13093
 fluorene, soln. in solid pentane, luminescence spectra 1=17917
 fluorenc., solns., mol. reson. interactions 3=7215
 fluorescein, absorption spectra, rel. to solute concentration 1=15887
 fluorescein, adsorbed on Al₂O₃ films, luminescence 1=20022
 fluorescein, in Al₂O₃, luminescence 2=4184
 fluorescein, on Al₂O₃, luminescence rel. to -OH groups 2=4183
 fluorescein anions in solns., fluorescence lifetime 2=7225
 fluorescein, aq. soln., effect of light on ions 3=3809
 fluorescein aq. soln., rel. to anti-Stokes excitation 2=22941
 fluorescein in boric acid, α -phosphoresc. and fluorenc. maxima 4=20502
 fluorescein-boric acid, luminescence spectra, conc. depend. 1=2762
 fluorescein cation, absorption spectrum 1=14013
 fluorescein dyes, luminescence 2=15608
 fluorescein, effect of pressure on optical props. 1=20019
 fluorescein, fluorescence in methyl methacrylate 1=9398
 fluorescein, fluorescence and phosphorescence, in boric acid, different temps. 3=15714
 fluorescein, fluorescence, solvent effects 4=29637
 fluorescein in frozen solvents, phosphoresc. 4=7204
 fluorescein in glycerin, concentration-depolarization of fluorescence 0=4423
 fluorescein, in glycerine, kinetics of concentration depolarization of luminescence 1=2761
 fluorescein in glycerol, luminescence depolarization 1=15888
 fluorescein, in glycerol, polarization of fluorescence 0=14661
 fluorescein, ionic forms, luminescence 3=7212
 fluorescein luminescence, active and nonactive absorption separation 3=18822
 fluorescein, luminescence det. 2=2457
 fluorescein, luminescence of ionic form 2=15606
 fluorescein in PMAM, absorpt., fluorescence spectra 2=12631
 fluorescein, photoluminescence 1=148
 fluorescein, photoluminescence quenching - 1=12886
 fluorescein in Plexiglas, fluorescence polarization 1=7723
 fluorescein, polarization of fluorescence 1=8128-30
 fluorescein primary and secondary fluorescence 1=8126-7
 fluorescein soln., absorption and luminescence spectra, effect of pH medium 2=19565
 fluorescein, soln., luminescence rel. to pH value 2=2724
 fluorescein, spectra, by quantum chemistry 3=2647
 fluorescein, spectra of solns. in mono- and PMMA 2=9281
 fluorescein-tripalflavin, phosphorescence, temp. extinction 2=18875

Organic compounds—contd

- fluorescein and tryptavine solid solns., luminescence, decay var. with wavelength 4=10232
 fluorescein, viscous solns., fluorescence 3=1697
 fluorescence and absorption properties, relation 3=23892
 fluorescence maxima, effect of solvents 0=10677
 fluorescence quantum efficiencies 1=15890
 fluorethylenes, C-F reson. integral calc. 4=25704
 fluorinated esters, carbonyl stretching frequencies 2=8088
 o-fluoroasinoile vapour, near u.v. absorpt. spectrum 4=17304
 fluorobenzene, dielec. const. near 9000 Mc/s 2=21916
 fluorobenzene, Earth's field proton free-precession signal 2=14331
 fluorobenzene, multiple proton mag. resonance relaxation 1=15910
 fluorobenzene, n.m.r., J coupling theory 3=14790
 fluorobenzene, nuclear spin-lattice relax. meas. 3=23912
 fluorobenzene, nuclear spin-rotation resonance 3=6421
 fluorobenzene, pi-orbital charge distribution, valence-bond theory 4=6611
 fluorobenzene, Raman spectra of solid and liquid 1=14034
 2-fluorobenzotrifluorides, J_{FF} in CF_3 group 3=25143
 fluorocarbons, F coupling consts., relative signs 3=15377
 fluorocarbon gases, bond strength and ionization pot. determ., agreement for 3 gases 4=5559
 fluorochloroethylenes, vibrational freq. calc., Average Rule and Complete Isotopic Rule 1=13996
 2-fluoro-3-chloropropane-2, cis and trans., n.m.r. parameters 2=20874
 1-fluoro, 2, 4-dinitrobenzene, n.m.r. spectra 1=17357
 fluoroform, nonresonant absorption spectra 0=10700
 fluoroform, vibr. states, pure rotational anomalies 3=2646
 α and β -fluoronaphthalenes, u.v. absorption spectra 0=5956
 fluoro-organic cpds., $\text{F}^{18}(\text{n}, 2\text{n})\text{F}^{18}$, F^{18} retention 3=5171
 fluoro-organic, F^{18} labelling by $\text{F}^{18}(\text{n}, 2\text{n})$ reaction 3=6928
 fluoroprene, 8-35 kMc/s spectrum 3=2641
 fluoropropenes, chem. shifts and spin-spin coupling const. temp. dependence 4=20107
 m-fluorotoluene crystals, luminescence 1=14053
 4-fluorotoluene, thermodynamic props., vibr. and rot. 2=20847
 fluorotrichloromethane, on C substrate, adsorption, 200° to 300°K 2=4498
 fluorotrichloromethane, microwave spectrum 0=15737
 fluorophosphates, fluorophosphonates, n.m.r., two radical contribs. 4=25742
 formaldehyde and CHDO, rotational fine structure 0=5921-2
 formaldehyde, deuteron field gradient calc. 4=30462
 formaldehyde, dipole moment of $^1\text{A}_2$ excited electronic state 4=12504
 formaldehyde, excited states, lifetime meas. 4=28197
 formaldehyde, field gradient at the deuteron, expt. 4=25705
 formaldehyde, H-atom reaction, isotope effect 0=14114
 formaldehyde, mag. rotation spectrum, singlet-triplet transitions 1=14038
 formaldehyde, magnetic h.f.s. in rotational spectrum 1=12281
 formaldehyde, maser characteristics, meas. 4=764
 formaldehyde, maser, using Fabry-Perot reson., 4 mm 4=14921
 formaldehyde, microwave spectrum, vibration-rotation interaction 1=14021
 formaldehyde, microwave Zeeman effect 1=7464
 formaldehyde, rotational spectra, computer programme 0=7747
 formaldehyde, (6, 3) rotational spectrum 3=25122
 formaldehyde, Stark-Zeeman effects in microwave spectrum 1=7465
 formaldehyde, 3000 A absorption, mag. dipole character and rotatory power 3=728
 formaldehyde, $2\nu_2$ -0 band analysis 3=12852
 formaldehyde, u.h.f. spectrum, rotational transitions and centrifugal distortion 3=25124
 formaldoxime, structure 3=17598
 formamide, microwave spectrum 0=4239
 formamide, proton relaxation times in r.f. field 0=5035
 formamide, structure and force consts., calc. 3=2648
 formate dihydrates, monoclinic, crystal structure 3=25730
 formic acid, dipole moment 3=6412
 formic acid, effect on crystallization of caprone 0=1885

Organic compounds—contd

- formic acid, field ionization at metal surfaces 4=456
 formic acid, mag. hyperfine spectrum 0=20668
 formic acid; maser, three-level action, study 1=19020
 formic acid, monomeric and dimeric, Urey-Bradley force consts., normal coordinate analysis calc. 4=28244-5
 formic acid- O^{18} , microwave spectrum 0=13439
 formic acid, photochem. reaction with chlorine 1=7918
 formic acid, proton mag. res. study 1=12902
 formic acid, Raman spectrum rel. to change of state 3=731
 formic acid, structure 0=13439
 formic acid, vibration frequency, rel. to H-H intermolec. bonds 3=25152
 formic acid-water mixtures, u. s. velocity and absorption 4=27174
 formyl cpds., C^{13} splittings in n.m.r. 2=3786
 formyl fluoride, microwave spectrum, structure and dipole moment 0=15738
 formyl fluoride, molec. structure, rotational constants of HCO^{18}F 1=12287
 free hydrocarbon chains, structure and rotational isomerization in gaseous state 4=6623
 free radical solutions, Overhauser effect and relaxation in weak fields 3=23910
 free radicals, interaction with silica gel surface, e.s.r. study 4=1321
 freon, in bubble chambers 1=3098
 Freon, mechanism of boiling under electric field 1=2912
 Freon, orthopositronium lifetime 3=2252
 Freon, thermodynamic props. 2=5057
 Freon-12, bubble chamber appl., bubble density 2=248-9
 Freon-12, ionization, electron avalanches analysis 2=3003
 fructose, X-irrad., paramag. centre prodn. and decay 2=12823
 fulvene, electronic structure calc., Pariser-Parr approx. validity 4=15323
 furan, acoustic and mech. props. 2=15586
 furan, electronic structure 0=17852
 furan, high-resolution n.m.r. 3=8301
 furan, proton resonance spectra analysis 2=6220
 furan, semiempirical SCF-LCAO-MO treatment 3=17599
 furan, thermodynamic functions calc. from spectroscopic data 0=13433
 furan, u.s. dispersion, molecular structure 3=21354
 gambodge sols, specific heat 0=18443-5
 gases, breakdown, electric, mechanism, effect of coeff. of secondary ionization 3=21756
 gases, ionization by ions and electrons 4=16439
 gases, mixtures with air, ignition by sparks 0=7109
 gases, proton mag. reson. spectra 0=16712
 gases and vapours, absolute Raman intensities and depolarization ratios 4=12502
 gelatin, conductivity 1=8927
 gelatin-glycerin, as a photoelastic material 0=907
 gelatin as model and photoelastic material 0=16194
 gelatin-resorcin interfacial surface tension meas. 0=14614
 gelatine, blasting, heat and rate of combustion 3=3394
 glasses, double refraction on cooling in stretched state 4=22863
 glutamic acid hydrochloride, irradiated, paramagnetic resonance 1=14797
 "globular", solid-state transitions, neutron scattering 3=13393
 glucose-rhoduline orange, luminescence 1=14647
 glucose, X-irrad., paramag. centre prodn. and decay 2=12823
 glutaronitrile, i.r. spectra and mol. configuration 1=17317
 glutathione, formation of S radicals by irrad. 2=6231
 glycerides, melting and freezing investig. by n.m.r. 2=22098
 glycerin, effect of temperature on Raman spectrum 1=14043
 glycerine containing H_2O or gelatine, dielectric const., 100 Mc/s-15 Gc/s 3=21391
 glycerine, deuterated, specific heat 2=13324
 glycerine diffusion of Fe^{57} and Mössbauer line broadening 4=21119
 glycerine, dispersion of hypersound 0=5011

Organic compounds—contd

- glycerine, elec. strength, under pulse conditions 4=27188
 glycerine, with KI, u.s. vel. and compressibility 1=11759
 glycerine-paraffin oil, dielec. props. rel. to ultra-sound 3=9471
 glycerine, sonoluminescence, single-bubble cavitation 1=134
 glycerine, spark excitation temp. 3=381
 glycerine, surface tension by drop-weight, viscosity effect 0=19082
 glycerine, velocity of hypersound 1=8183
 glycerine, velocity of hypersound 1=10570
 glycerine, viscosity, reduction at high shear stress 3=9422
 glycerine-water mixtures, viscosity meas. 0=14575
 glycerol, acoustic impedance in circular tubes 1=11758
 glycerol, dielec. dispersion, microwave and u.h.f., 28°C 1=1750
 glycerol, dielec. relax. rel. to assoc. 3=1704
 glycerol, dielec. relaxation, press. depend. 0=16702
 glycerol, diffusion of Fe^{2+} , Fe^{3+} , from Mössbauer effect 4=185
 glycerol, dissolution of NaCl 2=15581
 glycerol, glassy and crystalline, proton mag. spin relaxation 3=23250
 glycerol, liquid, molec. motion 0=6779
 glycerol-n-propanol mixtures, dielec. relax. times distrib. 4=195
 glycerol, oscillating cylinder viscometer theory 0=12401
 glycerol, relaxation data from pressure generator meas. 0=3586
 glycerol solns., fluorescence, max. polarization 0=8018
 glycerol, sonoluminescence and cavitation bubble implosions 2=19571
 glycerol, surface tension meas. by interferometric means 4=16098
 glycerol, viscosity 1=20349
 glycerol-water mixture, u.s. studies, conc. depend. 0=10658
 glycerol-water mixture, water drop falling into 0=8644
 glycerol-water mixtures, dielectric props. 2=19574
 glycine and addition cpds., i.r. and Raman spectra 4=22907
 glycine anhydride, crystal structure 0=3251
 (glycine), BeF_4 , ferroelectric, BeF_4 ion hindered rot., from F^{19} n.m.r. 4=10115
 β -glycine, crystal structure 0=4661
 glycine crystals, n.m.r. 77° - 293°K 2=10721
 α -glycine, crystalline, Raman spectrum 0=4421
 glycine, e.s.r., γ or X-irrad., h.f.s., temp. var. 3=18132
 glycine, γ -irrad., formation of $\text{NH}_2\text{-CH-CO}_2^-$ radical, e.s.r. orientation study 0=20665
 glycine, γ -irradiated, e.s.r. 1=20210
 glycine, γ -irradiated, e.s.r. hyperfine structure low-temp. variation 1=11484
 glycine [glycocol] sulphate, 85% deuterated, ferroelec. props. 0=4378
 glycine, paramag. res. at 9000 Mc/s 2=12822
 glycine and polyglycine, semiconductivity 1=7654
 glycine silver nitrate, ferroelec. transit. 4=20423
 glycine sulphate, dislocations and ferroelec. domains 1=17543
 glycine sulphate, dislocations and ferroelectric domains by X-ray topography 4=25943
 glycine sulphate, domain wall, dislocation catching 3=6618
 glycine sulphate, ferroelec. domain growth 2=4094
 glycine sulphate, ferroelec. growth and props. 2=6520
 glycine sulphate, i.r. absorption, O-H...O vibrations 1=14027
 glycine sulphate, scattering of light by ultrasonics 0=9845
 glycine, X-irradiated, e.s.r. spectra 0=499
 glycol, effect of 60 kV electrons on crystals 1=2400
 glycol, with KI, u.s. vel. and compressibility 1=11759
 glycol, permittivity and viscosity, H-bond mechanism 1=15896
 glycol soln., refractive index matching with heptane 0=3612
 glycol, surface tension, rotation effects, temp. depend. 0=73, 19087
 glycolic acid, free radicals formed by x-irradiation 0=20666
 glycyglycine HCl, irradiated crystals, e.s.r. 3=15942
 glyoxal, mag. rotation spectrum, singlet-triplet transitions 1=14038

Organic compounds—contd

- glyoxal, photochemical processes, primary at 4358A 4=25755
 glyoxime metal complexes, structures 0=3252
 gramicidin C, amorphism prod. by electron beam 0=1609
 gramicidin S iodomercurate crystal structure, refractive indices and density 4=30858
 guanadine Al sulphate hexahydrate, Cr^{3+} absorption spectrum 3=936
 guanidine Al sulphate hexahydrate, dielectric const., up to 23 kMc/s 3=23005
 guanidine Al sulphate hexahydrate, elec. cond. 0=13578
 guanidine Al sulphate hexahydrate, optical harmonic generation 4=10206
 guanidine Al sulphate hexahydrate, spontaneous polarization reversal 0=18097
 guanidine aluminium sulphate hexahydrate, γ -irrad., thermoluminescence 2=14759
 guanidine aluminium sulphate hexahydrate, hysteresis losses 2=16782
 guanidine aluminium sulphate hexahydrate, reorientation of $[\text{C}(\text{NH}_2)_3]^+$ 1=19923
 guanidine aluminium sulphate hexahydrate reorientation of $[\text{C}(\text{NH}_2)_3]^+$ 3=4941
 guanidine aluminium sulphate, piezoelectricity, inverse 3=23008
 guanidine Cr sulphate hexahydrate, polarized light absorpt., 1.7° , 4° , 20°K 3=13192
 guanidine iodide, crystal growth, rel. to ion binding energies on faces 4=10473
 guanidine sulphate, i.r. spectrum and H_2O vibrations 2=14681
 guanidinium Al sulphate hexahydrate, n.m.r., H positions 1=4059
 guanidinium Al sulphate hexahydrate, e.s.r. of Fe^{3+} 3=6747
 guanidinium Al sulphate hexahydrate, etch pits, dislocations 0=20818
 guanidinium aluminium sulphate hexahydrate, crystal growth and dissolution 1=14971
 guanidinium aluminium sulphate hexahydrate, etch pit dislocations 1=11533
 guanidinium iodide, morphology, orientation of merohedral forms 4=2006
 guanidinium sulphate, ferroelec. parameters, γ -ray effects 3=17937
 guanine-cytosine base pair, electronic structure, semi-empirical SCF-LCAO-MO calc. 4=20086
 guanine, dielec. props., semiconductivity 3=866
 guanine hydrochloride dihydrate, crystal structure 4=4633
 gumdanmar sols, specific heat 0=18443-5
 halides, with alkali metals, diffusion flames, chemiluminescence and radical reactions 4=22406
 halides, positron annihilation 2=15158
 halo-ethane gases, u.s. dispersion 2=2773
 halogen-containing, induction studies by C^{13} , Br^{79} , pure quadrupole resonance 0=15761
 halogen fluorobenzenes, n.m.r., F^{19} shielding with π -electron distrib. 4=30480
 halomethane gas mixtures, sound velocity dispersion 0=19206
 halomethane-inert gas mixtures, ultrasonic dispersion 4=5246
 halomethanes, C^{13} -H coupling consts., substituent effects, max. overlap orbital treatment 4=22405
 halomethanes, reaction with Na, activation energy and number of CH and CF bonds 3=18440
 1-halonaphthalenes, external spin-orbit coupling in soln. 3=2608
 α and β halonaphthalenes in 4:1 isopentane-butanol glass, phosphorescence polarization, 77°K 4=4314
 halopicrins, molec. structure 2=14234
 halotrimethylplatinum cpds, infrared spectra, similarity to methyl halides 4=30693
 14-heptacosanol, proton resonance, rel. to dielec. relaxation 0=13894
 n-heptane, adsorption on quartz, Van der Waals forces present between the two mols. 4=23603
 n-heptane-air mixtures, ignition 3=20991
 heptane, diffusion of small solute molecules 1=10509
 n-heptane, double refraction in strong shock waves 3=7205
 n-heptane gas stream, electron scatt. 3=15397
 n-heptane, ion pair average energy load 4=24252
 heptane, liquid, PVT relations 1=8108

Organic compounds—contd

- heptane, luminescence 2=15609
 n-heptane, molecular structure 0=15778
 n-heptane, neutron diffusion parameters 3=22143
 heptane, nuclear spin-lattice relaxation time 1=8136
 heptane, refractive index matching with aqueous glycol soln. 0=3612
 heptane, 2.8 MeV electron beam, energy loss 1=18935
 heptane ultrasonic vibration potentials 0=6787
 heterocyclic cpds., proton resonance, solvent effects 0=7806
 N-heterocyclics, $\pi^* \rightarrow \pi$ and $\pi^* \rightarrow n$ phosphoresc. polarization 4=1296
 hexa-antipyrène iodides, e. s. r. of lanthanon ions 2=4257
 hexachlorobenzene, phosphorescence at 77°K. 2=4185
 hexachlorobenzene, quadrupole resonance study 0=18234
 hexachlorobiphenyl, liquid, shear relaxation times 2=11340
 hexachloroacetone, u.v. absorption spectra 1=8846
 hexachloroethane, magnetic anisotropy meas. 4=7212
 hexadecane-1- C_{14} emission and glycogen light-scattering source, comparison 4=5357
 hexadecane, liquid, PVT relations 1=8108
 hexadecyl and octadecyl bromide, dipole orientation 0=18087
 hexadeuterobenzene, ionization potentials from Rydberg series observations 1=7478
 hexaethyldisiloxane, i. r. spectrum rel. to temp. 2=17467
 hexafluoroacetone, u.v. absorption spectra 1=8846
 hexafluoropropylene-tetra fluoroethylene copolymers, relaxations 2=23903
 hexahelicene molecule, triplet states in optical activity 2=20781
 hexahelicene, phosphor-fluor. ratio 2=10628
 hexamethylbenzene, conductivity rel. to crystalline transition 3=10873
 hexamethylbenzene, luminescence, lifetime var. solvent 4=20496
 hexamethylbenzene, phosphorescence at low temp. 3=13211
 hexamethylbenzene, proton resonance at low temps. 2=8684
 hexamethylbenzene, in solid phase, triplet-singlet luminesc. 4=13097
 hexamethylene amine-water, stratifying system, light scatt. indicatrices 4=24215
 hexamethylenediammonium adipate, X-irrad., e. s. r. spectra 4=12531
 hexamethylenetetramine, crystal lattice vibr. 4=3978
 hexamethylene-tetramine, crystal structure 1=12348
 hexamethylene tetramine crystals, X-ray reflection study 4=23379
 hexamethylenetetramine, Debye approx. 3=15440
 hexamethylenetetramine, electro-optical effect, advantages 3=23049
 hexamethylenetetramine, growth from vapour 3=23400
 hexamethylene tetramine, N^{14} resonance meas. 2=9724
 hexamethylenetetramine, X-ray diffuse scattering, theory 4=26171
 hexamethylenimine-water solns., conc. fluctuations, light scatt. study 3=21365
 hexamethylenetriramine, frequency distrib. of crystals 2=18519
 hexamine, vibrn. spectrum, calc., elastic constants comp. to Li, Fe 4=28358
 hexamine Ni halides, low-temp. magnetic transitions 1=7775
 hexa-m-phenylene radical anion, e. s. r. and optical spectra 4=25731
 n-hexane, absorption on graphitized carbon blacks 2=10944-5
 hexane, adsorption in quartz 2=15098
 n-hexane-air flame, temp. meas., from double probe ion current 4=18460
 n-hexane-air mixture, flames, electron temp. 4=29221
 n-hexane-air mixtures, detonation in shockwaves 1=9170
 n-hexane conduction currents under polar conditions 0=6800
 n-hexane, conductivity induced by electron injection 1=12899
 n-hexane, conductivity induced by injected electrons 2=9288
 hexane, density, temp. depend., near crit. pt. 1=13021

Organic compounds—contd

- hexane, diffusion coeff. of positive and negative ions, meas. 4=14154
 n-hexane, elec. conduction, ionic mech. 2=11383
 n-hexane, elec. strength, effect of dissolved gases 4=5201
 n-hexane, electric strength 3=14180
 n-hexane, electrical breakdown study 1=6869
 hexane electron conduction under pulse conditions 0=3527
 n-hexane, glow emission spectrum, analysis of four regions 1=14044
 n-hexane, ion-molecule reactions, in radiolysis at low temps. 3=6927
 n-hexane, ion pair average energy loss 4=24252
 n-hexane, liq., ion and self-diffusion coeffs., meas. 4=24194
 hexane, liquid, elec. cond. 3=23900
 n-hexane, liquid, elec. cond., in pulsed fields 0=12418
 n-hexane, liquid, electrical conductivity rel. to γ -irradiation 3=11804
 n-hexane, molecular structure 0=15778
 hexane, neutral decomposition products, mass-spectra analysis 1=9963
 hexane, nuclear spin-lattice relaxation time 1=8136
 n-hexane, photocurrent 1=15903
 n-hexane, photo-injection of charge 0=16699
 hexane, polarization phenomena 4=2704
 n-hexane, pulse elec. cond. 4=8221
 n-hexane, refractive index changes near electrical breakdown 1=10518
 hexane-silicone mixture, electron drift mobility 1=18427
 n-hexane, solid, radiation chemistry. 3=25838
 n-hexane, surface tension, effect of N_2 and Ar, 1-120 atm 3=18795
 hexane-water, du Nöy ring, interface profiles and areas 0=2163
 hexanediamine, nuc. quadrupolar coupling 3=2656
 hexanetriol 1,2,6, dielec. relax. rel. to assoc. 3=1704
 hexanetriol 1,2,6, elastic relax. time distrib. 2=7196
 hexanol, adsorption from aq. soln. 4=29610
 n-hexanol, dielectric, orientation polarization, rel. to solvent 3=21395
 n-hexanol in hexane and benzene, polarization data 2=2729
 n-hexanol, solutions in octane, dielectric losses 1=12893
 1,3,5-hexatriene, vapour phase photochemistry 3=11355
 hexogene crystals, shocks-wave velocities and effects 0=16776
 holmium ethyl sulphate, zero field splitting 3=8600
 homologous series decomposition kinetics 4=30484
 hydrate of tetra iso-amyl ammonium fluoride 1=20569
 hydrazine synthesis in chemonuclear reactions 1=11056
 hydrazyl-type radicals in viscous media, e. s. r. 3=21418
 hydrozyls, h.f.s. in e. s. r. 1=14106
 hydrocarbon acids and alcohols, straight-chain, adsorption in water surface 0=14615
 hydrocarbon-air flames, max. temp. meas. 2=2915
 hydrocarbon-air mixtures, self ignition in shock waves 1=12916
 hydrocarbon chains, unsaturated, spin-spin coupling 3=4783
 hydrocarbon films, structure invest. 2=12920
 hydrocarbon gas mixtures, thermal diffusion, stream direction and "forgotten effect" 4=2630
 hydrocarbon gases, diamagnetic susceptibility 2=1209
 hydrocarbon gases, γ -radiolysis, abs. yields of H_2 2=19164
 hydrocarbon gases, ion-pair formation energy by X-rays 2=15886
 hydrocarbon gases, ionization, by beta-rays, H isotope effect 3=19171-2
 hydrocarbon gases, stopping of protons and He ions 3=22133
 hydrocarbon- H_2 mixtures, virial coeffs. 2=1196
 hydrocarbon ions, g-values, structure depend. 1=14090
 hydrocarbon liquids, elec. breakdown, statistical theory 0=12425
 hydrocarbon liquids, elec. strength, molec. structure 0=12424
 hydrocarbon liquids, saturated, ion mobilities 2=13545
 hydrocarbon liquids, stopping power for 5.3 MeV α -rays 2=3423
 hydrocarbon mixtures, Raman spectral analysis 4=10673
 hydrocarbon molecules, I-I coupling 2=14316

Organic compounds—contd

- hydrocarbon oil, elec. breakdown, theory 4=5204
 hydrocarbon-quinone complexes, e.s.r. 2=8669
 hydrocarbons, adsorpt. by metal films 3=20939
 hydrocarbons, alkylated ring, eqn. of state 2=7199
 hydrocarbons, α -radiolysis 0=4734
 hydrocarbons, alternant, different orbitals for different spins 4=15319
 hydrocarbons, alternant, and mono- and divalent ions, electronic spectra, correlations 0=20648
 hydrocarbons, alternant, pairing of electronic states 0=20649
 hydrocarbons, appearance potentials of pos. and neg. ions 4=24546
 hydrocarbons, aromatic, band length 2=6213
 hydrocarbons, aromatic, catacondensed, assignment of triplet states 2=8111
 hydrocarbons, aromatic, nonbenzenoid, molecular diagrams 2=2015
 hydrocarbons, aromatic, phosphorescent, e.s.r. study 0=21080
 hydrocarbons, aromatic, polycyclic, p-band positions calc. 2=16538
 hydrocarbons, aromatic polynuclear, out-of-plane CH vibrations 0=17738
 hydrocarbons, aromatic polynuclear, spectral shifts in solution in paraffin hydrocarbons 0=16707
 hydrocarbons, aromatic, two-quantum statistics in phosphorescent state 4=6641
 hydrocarbons, aromatic, zero-field splitting theory 4=3901
 hydrocarbons, C—C bond refractivities 1=14076
 hydrocarbons, C—H bond moment 3=15334
 hydrocarbons, charge-transfer reactions rel. to dissociation 2=161
 hydrocarbons, conjugated, electron affinities 2=2012
 hydrocarbons, conjugated, nonalternant, electronic spectra, calc. by limited configuration interaction method 4=20087
 hydrocarbons, conjugated, π -electron ionization energies 2=2011
 hydrocarbons, critical volume and molecular dimensions 1=7499
 hydrocarbons, double bonds rel. to Raman spectra 2=20848, 22990
 hydrocarbons, effect of molecular bonding on ionization coeffs. 3=9721
 hydrocarbons, entropy of vaporization 1=8264
 hydrocarbons, extended Hückel theory 4=1243
 hydrocarbons, flame bands, deuterium substitution 4=25706
 hydrocarbons, γ -irradiated, "free ion" yield 4=2187
 hydrocarbons, glow emission spectra, analysis of four regions 1=14044
 hydrocarbons, heat of wetting of Al in solution 3=16131
 hydrocarbons, heats of hydrogenation, rel. to hybridization 2=545
 hydrocarbons, ion formation, negative, by electron beams 4=16438
 hydrocarbons, ionization by electrons meas. 4=2942
 hydrocarbons LCAO treatment of conjugated molecules 0=9825
 hydrocarbons, liquid, d.c. cond., hopping model 4=16123
 hydrocarbons, liquid, γ -induced conductance 4=14181
 hydrocarbons, long saturated chains, theory of attractive forces 4=6659
 hydrocarbons, mass spectra from high-energy electron impact 3=4013
 hydrocarbons, mass spectra, temp. depend., effects of electron bombard. 0=20711
 hydrocarbons, model for thermodynamic props. of aq. solns. 2=17444
 hydrocarbons, negative ion mass spectra, sensitivity for $^+$ ion formation 0=3740
 hydrocarbons, nuclear coupling 2=6208
 hydrocarbons, polycyclic, mol. orbital, π electron and atomic localization energies 4=3894
 hydrocarbons, polymer film prod., in discharge 1=20664
 hydrocarbons, pyrolyzation by flash illumination 0=1962
 hydrocarbons, ring condensed p.m.r. shifts 2=14328
 hydrocarbons, sat., molec. interaction, critical consts. rel. to chain length 2=6233
 hydrocarbons, saturated, additivity of binding energies 1=17337
 hydrocarbons, saturated, bond energies and next-nearest-neighbour interactions 0=1512
 hydrocarbons, saturated, polymerization 1=20766

Organic compounds—contd

- hydrocarbons, saturated and unsaturated, elec. conductivity 4=11214
 hydrocarbons, saturated gaseous, n.m.r. screening constants 4=1311
 hydrocarbons, saturated, ionization current after irradiat. 4=27186
 hydrocarbons, 2nd virial coeffs. of mixed vapours 3=14205
 hydrocarbons, in solid A matrix, i.r. spectra, liq. He and H temp. 1=6213
 hydrocarbons, unsat., Raman and electronic abs. spectra 3=15319
 hydrocarbons, unsaturated, dipole moments, hyperconjugation effects 1=4954
 hydrocarbons, unsaturated, gaseous, sparking potential rel. to molecular structure 0=14999
 hydrocyanic acid, and D-substitution product, electro-optical parameters 3=15366
 hydrocyanic acid, gas maser, emission at 88.6 kMc/s 1=9684
 hydrocyanic acid, phase transition, study by N^{14} pure quadrupole resonance 0=5283
 hydroquinone, whiskers, mechanical strength 1=20371
 hydroxy-benzenes, proton chem. shifts and π -electron distrib. 3=4781
 hydroxycyclohexadienyl, by OH reaction with benzene in water 2=10965
 imidazol, crystal struct., atomic 3=18329
 imidazole, effect of purification on semiconducting props. 3=10826
 imidazole, electrophilic substances present, u.v. spectrum 4=15370
 imidazole, energy gap calc. 1=17745
 imidazole, semiconducting properties 4=26065
 indene, molecular orbital theory 0=5973
 indene, n.m.r. study by proton-proton decoupling 2=14327
 indigo carmine radical, aq. soln., e.s.r. hyperfine structure lines 2=23010
 indigo, effect of 60 kV electrons on crystals 1=2400
 indole, luminescence 2=6629
 indophenol, molecules, apparent asymmetry, by n.m.r. 3=20003
 i.r. absorption, absolute intensity measurement 1=7716
 i.r. absorption spectra and n.m.r. of H_2O in various subs. 0=16719
 i.r. dispersion of several liquids 0=84
 insulating liquids, conduction current pulses under elec. stress 4=16120
 insulating oil, elec. breakdown, effect of gas press. 1=1755
 insulating oil, elec. props., effect of dissolved gases 1=4354
 insulators, conductivity and photoconductivity, radiation induced 4=17513
 insulin sulphate, crystal props. and structure 0=4663
 iodides, pyrolysis kinetics 3=16157
 iodoacetylene, pure rot. Raman spectrum 4=6624
 iodobenzene, C^{13} nuclear magnetic resonance 3=10543
 iodobenzene, dielectric relaxation 0=19145
 iodoform, absorption edge, press. depend. 0=4407
 iodoform, crystal epitaxial growth and surface texture 4=26612
 iodoform, magnetic anisotropy meas. 4=7212
 ion-exchange resins, percolation of water under pressure 0=12067
 ion radical salts, e.p.r. study of spin correlation 1=14804
 ion radical salts, triplet spin exchange 3=11109
 ions, mass spectra 4=29999
 ionic photoconductive dyes, charge carrier sign 3=8531
 β -ionylidene crotonic acid, trans isomer, crystal structure 0=4654
 isoamyl alcohol film, influence on water drop evaporation 1=10494
 isoamyl bromide, dielectric relaxation, -75 to 25°C 0=16701
 isoamyl lactate, dielec. dispersion, at cm wavelength 1=1749
 isoamyl phthalate, mol. dipole-dipole interaction, from dielectric relaxation 3=23897
 iso-amylol-water boundary, mass transport, hydrodynamic stability effects 4=24193

Organic compounds—contd

- isobutane, chemical displacement reaction with H, steric effect 4=26753
 isobutane, gas-phase radiolysis 3=8978
 isobutane, molecular beam techniques 0=2758
 isobutane, proton resonance spectra 4=30073
 isobutane, reaction with O atoms 3=11340
 isobutene, kinetics of HI addition 3=11338
 isobutyl bromide, proton resonance in crystals and super-cooled liquid 0=3139
 isobutyl bromide, proton resonance in liquid 0=5039
 isobutyl bromide, u.s. meas. of vibrational, rotational isomeric, structural and shear relaxation 0=17736
 isobutyl radicals, isomerization 3=8948
 isobutylamine, adsorption by Ge surfaces 0=12115
 isobutylene, photocond. and photoionization 4=27189
 isobutylene, structure from microwave spectrum 4=1297
 isomers, Mossbauer effect, cis- and trans- equal shifts 4=15360
 isonitriles, long-range N^4-H^1 coupling 1=19669
 iso-octane-benzene mixtures, vapour-liquid equilibrium 0=6781
 isopentane, elec. discharge, Townsend and streamer theory 1=1897
 isopentane, interaction with excited molecules 4=6608
 isopentane, photocond. and photoionization 4=27189
 isopentane, self-diffusion coeff. 0=3513
 isopentane, spectral dispersion curves 3=17592
 isoprene, anisotropy by scatt. of light 2=6239
 isoprene, molecular configuration 4=15371
 isoprene polymerization spectra, with Li, Na, K, in solns. 4=25796
 isopropanol, i.r. spectra and H-bonding 3=12853
 isopropanol, mixtures with acetone, boiling pt. and surface tension 1=15858
 isopropanol, superheated, nucleation by elec. field 3=14420
 isopropyl alcohol, b.p. and strong elec. field 2=7472
 isopropyl iodide, pyrolysis, kinetics 4=23631
 isopropyl, n.m.r. spectra, types A^B, A^BX 3=10542
 isopropyl radicals, thermal isomerization 2=14236
 isopropylamine liquid state, u.s. velocity and compressibility 1=18406
 isopropylamine, u.s. velocity rel. to molecular parameters 1=18403
 isopropylquinone, n.m.r. spectrum, electron transfer effects 4=17313
 di-isovaline, γ -irradiated, free radical det. 2=8126
 itaconic acid, irradi., e.s.r. study of radical formed 4=1886
 jet engine fuels, flame temp., visible emission spectra 0=8852-3
 β -keratin, amorphism prod. by electron beam 0=1609
 keratin fibres, elec. cond., relative humidity depend. 0=11655
 α -keratin, X-ray diffraction of six forms 0=10296
 kerosene, compressibility measurement 1=9365
 kerosene, neutron age to In reson., from Na-Be source 1=16802
 ketene and deuteroketenes, fundamental vibrational frequencies 3=12854
 ketene, i.r. spectrum and vibrational potential function 3=17600
 ketene, molecular potential energy and rotational distortion consts. 0=11524
 ketene, out-of-plane CH_2 bending 4=15365
 ketene, photochemical dissociation 0=15683
 ketene, unimolecular dissociation 2=6230
 n-ketone liqs., thermal cond. meas., -100° — $+200^\circ C$ 4=24204
 ketones, aliphatic, photoionization 4=21466
 ketones, dipole moments and relaxation times 0=20692
 ketones, magnet optical, rot. dispersion, near $n \rightarrow \pi^*$ transition 4=17305
 ketones, $n-\pi^*$ u.v. absorpt. and i.r. $C=O$ band, correl. 0=7791
 ketones, Raman spectra, relative line intensities 0=85
 ketonic carbonyl groups, vibrational bands, temp. effects 1=12288
 ketyls, cyclic, spin densities from e.s.r. meas. 4=1305
 ketyls, e.s.r. spectra rel. to coupling consts. and spin densities 3=4777
 Keynon-Banfield radical, photocond. and semicond. 2=14584
 kryptocyanine dye for laser giant pulse operation by bleaching 4=27710

Organic compounds—contd

- labelling, catalytic tritium method 3=19800
 lac, sp. ht., meas. calorimeter for bad conductors 0=7008
 lactose crystallization rate as combination of matter and heat transport 4=26584
 lactose, irradiated, e.s.s. spectra 0=500
 lemongrass oil, C^{14} activity, world data (1954-59) 0=7499
 leucine, paramagnetic resonance and semiconductor theory 1=11115
 liq. hydrocarbons, γ -irradiated, energy transfer 0=18442
 liquid binary mixtures, thermal cond., dimensionless presentation 4=8202
 liquid binary mixtures, u.s. velocity 3=9455
 liquid crystal phases, rel. to dielectric states 1=17831
 liquid film, Na-montmorillonite expanded in NaCl solns. 4=16091
 liquid hydrocarbon, dynamic contact angle with water between parallel plates 3=1672
 liquid mixtures, binary, dielec. const., meas. 0=19137
 liquid mixtures, binary, sonic velocity, conc. depend. 0=6786, 16695
 liquid pairs, coord. numbers and diffusion coeff., temp. depend. 3=21329
 liquid paraffin in water, changes in rheological props. on ageing 4=10662
 liquid, ring compounds, Raman scatt., stimulated emission 3=5445
 liquid scintillators, effect of solvent and solute structure on pulse heights 1=5281
 liquid scintillators, emission spectra 3=9464
 liquid scintillators, pulse height distrib. for fast neutrons 2=5524
 liquid semiconductors, u.v. photocond., elec. field depend. 1=5280
 liquid and solid, radioluminesc. specific quenching 4=28748
 liquids, associated, u.s. viscoelastic props. 0=8651
 liquids, binary, light scatt. 2=17462
 liquids containing D, nuclear quadrupole relax. 4=24248
 liquids, correl. of energies of molec. orientation and of viscous flow 0=19100
 liquids, degassed, proton spin-lattice relaxation, press. depend. 0=16720
 liquids, 5- and 6-membered ring cpds., molar sound velocity 0=19134
 liquids, i.r. spectra, absolute intensities 4=5382
 liquids, internal press. rel. to temp. 2=4981
 liquids, luminescence and Cherenkov radiation, X- and γ -ray excited 0=19158
 liquids, mag. rotatory power and rotativity 0=3543
 liquids, mixtures, u.s. dispersion 4=21132
 liquids, molec. orientation distrib., Rayleigh light scatt. 3=21369
 liquids, multiple proton mag. resonance relaxation 1=15910
 liquids, nuclear relax., study using spin-echo spectrometer 4=16127
 liquids, paraffins, bromine substituted, dipole orientation relaxation 3=7207
 liquids, polar, de-ionization 4=23663
 liquids, polar, dielec. relaxation, temp. variation 0=19138
 liquids, polar, with high dielec. permittivity and resistivity 0=2172
 liquids, proton mag. reson. spectra 0=16712
 liquids, proton spin-lattice relaxation, temp. depend. 1=9409
 liquids, Raman spectra, overtone lines 0=87
 liquids scintillators, luminescence, primary-secondary mixtures 4=14175
 liquids, speed of sound 4=8205
 liquids, surface tension props. 4=18167
 liquids, temp. variation of u.s. vel. and adiabatic compressibility 3=7204
 liquids, u.s. propagation under pressure 1=15873
 liquids, u.s. velocity, rel. to molar refraction and internal pressure 0=19130
 liquids, viscosity, structural data 3=21312
 long linear conjugated molecules, one-dimensional collective oscillation of π electron 0=17859
 lubricating greases, capillary viscometer 0=8595
 lubricating greases, flow in plunger viscometers 0=14577
 luminescence, crystal exciton, imperfection effects 4=10228
 luminescence, of impurities, in crystals 2=23567
 luminescence reabsorption, exciton diffusion mechanism 1=11399

Organic compounds—contd

- luminescence, in single crystals, exciton contrib., review 1=3850
 luminescence, solns., dilute, laser induced, double photon mechanism 4=5193
 luminescence, triplet, in glassy solns 4=7198
 lycopodium spores, deposition on glass slides in wind tunnel 1=164
 magneto-optical rotation spectra 4=25605
 Makrofol, fission fragment track registration and neutron detection 4=19344
 malachite green, polarization of fluorescence 2=6630
 maleic acid, diamagnetic susceptibility 1=14073
 maleic anhydride liquid state, u.s. velocity and compressibility 1=18406
 maleic anhydride, u.s. velocity rel. to molecular parameters 1=18403
 malonic acid, decarboxylation, C isotope effects 4=13703
 malonic acid, e.s.r. hyperfine splitting due to C^{13} 1=9059
 malonic acid, radiation damage 0=13571
 malonic acid, X-ray irradiat. 2=6892
 malononitrile, i.r. absorption spectrum in Ar matrix 3=10527
 maltose, X-irradiat., paramag. centre prodn. and decay 2=12823
 mellitic acid, crystal structure 0=10319
 melts, molar sound velocity, temp. coeff. 2=5015
 melts, u.s. velocity 1=6857
 mesitylene, internal conversion, upper electronic—first excited singlet states 4=1286
 mesitylene, liquid, atomic structure 2=15564
 mesitylene, multiple proton mag. resonance relaxation 1=15910
 mesitylene, in solid phase, triplet—singlet luminesc. 4=13097
 mesonaphthodanthrene and mesonaphthodanthrone, semiconducting props. 0=18056
 mesonaphthodanthrene, photo-oxidation 0=21289
 (2,2) metacyclopentane, proton resonance, relative signs of J^H 2=16563
 meta dioxanes, substituted, geminal and vicinal coupling consts. 4=28261
 meta-fluorochlorobenzene, spectra, 10.5–26.3 Gc/s 4=4768
 metal—ammine complexes, NH_3 exchange reaction 2=4525
 metal carbonyls, low-frequency fundamentals 2=16530
 metal chelate salts, crystal growth and symmetry 0=4589
 methane—A gas mixture, 2nd virial coeff. 2=15640
 methane, abs. Raman intensities rel. to polarizability 2=7258
 methane, absorpt. band, test of theoretical model approx. 4=9743
 methane, absorption spectrum, 2470–3200 cm^{-1} 0=15735
 methane, abundance in atmosphere 4=17878
 methane, abundance in ground level air 3=13664
 methane, adsorption on Ba films, in thermionic current presence 2=843
 methane, adsorption from H_2 , 76°K, partial press. and effective ads. press. 4=13687
 methane, adsorption on Hg surface 2=1126
 methane, adsorptn. on carbon black 3=1377
 methane—air flames, elec. cond. 2=17513
 methane—air flames, interaction with pressure waves 1=11854
 methane—air and methane— O_2 with K addition, combustion, elec. cond. of products 4=18250
 methane—air, methane—oxygen mixtures, viscosity variations under mag. field influence 1=158
 methane—air mixtures, detonation wave pressure 0=10351
 methane, in atmosphere, tritium content 2=2466
 methane, atmospheric distrib., spectral obs. 2=8951
 methane boiling and triple points, detm. 3=9659
 methane and CD_4 , i.r. spectra 2=14683
 methane and CD_4 , liq. and solid, ν_3 fundamental, i.r. absorption 4=12506
 methane and $CHCl_3$, photochlorination, isotope effect 3=11356
 methane, charge transfer reactions with A^+ and Kr^+ 0=16976
 methane, compressibility meas. by n.m.r. 1=8146
 methane in condensed O_2 , N_2 and Ar, solvent shift and half-width of i.r. absorpt. band 4=5183
 methane- d_1 , vibr. analysis by perturb. method 4=25709
 methane- d_2 , analysis of two i.r. bands 3=12855
 methane- D_2 mixtures, n-irrad., failure of T elastic collision model 3=18460

Organic compounds—contd

- methane- d_4 , vibr.—rot. energy transfer 3=6414
 methane- d_4 , $2\nu_2$, vibr.—rot. interact. 3=6413
 methane, density matrices for wave functions 0=9823
 methane, density, 20×10^6 atmospheres 3=21100
 methane, detection of free methyl radicals in electrical discharge 1=1477
 methane, deut. forms, n. m. r. studies using pulse techniques 2=14852
 methane, deut. forms, solid and liq., proton spin—lattice relax. 2=10709
 methane, deuterated (CH_3D), spectrum, 400–6000 cm^{-1} vibr., rot. 3=22587
 methane and deuterioforms, mass spectra, metastable transitions 3=25148
 methane and deuteromethane, anharmonic vibrations, theory 2=22959
 methane and deuteromethane, electric strength 0=19634
 methane, diamagnetism, calc. 0=17795
 methane, dielectric constant 0=19204
 methane diffusion in CCl_4 4=18189
 methane, diffusion of CO , N_2 , CF_4 and self, meas. 4=11238
 methane, diffusion in O_2 , and intermol. potentials 2=2764
 methane, effect on Ta solid films 4=13685
 methane, elec. discharge, light emission, time depend. 0=2330
 methane, electric moments and molecular orbitals 4=3895
 methane, electro-optical parameters rel. to dipole moments 4=15367-9
 methane, electron avalanches, carrier amplific. 3=9761
 methane, electron avalanches, mean energy and drift velocities 4=11546
 methane, electron drift velocity, avalanche meas. 4=11253
 methane, electron inelastic scattering 4=12394
 methane in electron tubes, pressure changes rel. to cathode emission 4=21576
 methane, electronic structure, Hartree—Fock approx. 3=10534
 methane, electronic wavefunction 4=1298
 methane, eqns. of state and thermodynamic props. 2=9311
 methane, equation of state, 0°–150°C 4=21175
 methane, equilibrium and mean C—H distance 0=17856
 methane, far-u. v. spectrum 2=14284
 methane, freq. distrib. at 6.5°K, neutron scatt. meas. 4=22479
 methane, γ -irradiat. at 4.2°K, H atom free radicals, e. s. r. 2=3791
 methane, γ -irradiated at low temp. 3=12874
 methane gas, slow-neutron scatt., interference scatt. effects 2=18475
 methane, gaseous, ultrasonic relaxation 1=8162
 methane, ground-state wave-function 0=7811
 methane, ground-state wavefunctions, calc. using SCF MO method 4=20088
 methane- H^{+2+} ions, interact. energies 2=12354
 methane- H_2 —air flame, probe characteristics 3=4154
 methane- H_2 equilibrium of gaseous and solid phases 0=8710
 methane, in H_2 and N_2 , detection by thermal conductivity 0=16402
 methane, high-density, vibr. relax., binary collision theory 4=2731
 methane, indirect p—C spin coupling meas. 4=15382
 methane, inelastic scatt. of slow neutrons, diff. cross-sections 1=15945
 methane, intensity of ν_2 i. r. band 2=1995
 methane, i. r. absorption line broadening 2=14272
 methane, i. r. spectrum in liq. A 2=17464
 methane, interaction with H atom 4=25583
 methane, ion—molecule reactions 4=11538
 methane ions, dissociation due to collisions with mols., 3.5–100 keV 4=9783
 methane, ionization coeffs., 9.7–52.6 mm Hg 3=24214
 methane, ionization by electron impact 3=1929
 methane, ionization by ions of 200–1200 keV energies 4=27488
 methane and its isotopic forms, absolute Raman intensities and depolarizations, calc. 4=9758
 methane, isotopically substituted, zero-point energy 3=12794
 methane, K—LL spectrum, fine structure 0=17715
 methane—Kr solid solns., excess free energy 2=574
 methane, λ -point transition 1=8993
 methane liq., electrode influence on elec. strength 4=21144

Organic compounds—contd

- methane, liq., slow neutron scatt. 3=14142
 methane, liquid, dielec. consts. 4=11209
 methane, liquid, eqn. of state at low temp. 3=18801
 methane, liquid mixture with Ar and Kr, viscosity 3=7185
 methane, liquid mixtures with A and N₂, surface tension 2=1125
 methane, liquid, neutron scatt. rel. to mol. interaction 2=5002
 methane, liquid, self-diffusion 2=13328
 methane, liquid, self-diffusion and impurity-controlled proton relaxation 3=7202
 methane, liquid, thermal cond., and theory 4=169
 methane, liquid, viscosity and mol. interaction 3=9423
 methane, loss of energy of an electron beam traversing gas 0=19764
 methane, mol. structure det. from moments of inertia 3=2597
 methane, mag. screening constant of protons 2=6222
 methane, mag. susceptibility, calc. 0=9826
 methane, major i.r. bands, total absorptance 2=20800
 methane, in metals, chromatographic gas analysis 2=21603
 methane and methane-A mixture, in proportional counters 0=12722
 methane and methane-d₄, Raman intensities 3=22559
 methane and methyl halides, ionization-efficiency curves for molecular and fragment ions 4=24600
 methane, microwave absorption in compressed gas 2=13380
 methane, mol. polarizability, orbital calc. 4=3870
 methane, molecular electronic structure 4=1299
 methane, molecular rotation 2=8075
 methane, molecular wave-function 0=15769
 methane, molecular yields in radiolysis 0=16385
 methane molecule, correlation energy, estimation 4=3896
 methane molecule, electron distribution 4=17306
 methane molecule, equil. bond lengths 2=14244
 methane, n scatt. vibr. excitation 4=30464
 methane-N₂ mixture, discharge current rise due to single electron 4=5578
 methane-N₂ system, solid-liquid equilib. 2=9461
 methane-Ne, cosmic ray muons in, energy-loss-rate 3=24821
 methane, negative ion mass spectra 0=3740
 methane, ν_1 Raman band, rot. structure 3=22586
 methane, nuclear coupling rel. to π electrons 2=3784
 methane-O₂, burning-detonation transition 0=12105
 methane-O₂ ionized mixture, electron-neutral atom collisions, meas. 4=17261
 methane, octupole moment calc. 4=20031
 methane, octopole moment, calc. using LCAO-MO-SCF wavefunctions 4=22408
 methane, one-centre S.C.F. wave-function 1=19659
 methane, one-centre wave functions 3=17577
 methane, oxidation, C₂H₅⁺ ion formation 4=13713
 methane oxidation in shock waves, mechanism 4=17859
 methane-oxygen mixtures, combustion product parameters 2=19145
 methane-oxygen mixtures, explosions, within gas boundary 2=4542
 methane-oxygen mixtures, nuclear relax. 2=1210
 methane-oxygen mixtures, reactions in shock tube 2=12963
 methane, photochemistry at wavelengths below 900Å 3=13618
 methane, photo-ionization 3=3404
 methane, photoionization, continuous absorpt., and fluorescence 4=25690
 methane, photolysis, by vacuum u.v. 3=25834
 methane-propane mixtures, selective solubility in liquids 0=6782
 methane, proton affinity 2=20850
 methane, proton spin-lattice and spin-spin relax. 4=6651
 methane, pure and with O₂, proton spin-lattice relax. 1=18476
 methane, radiolysis 3=16182
 methane radiolysis, effect of additives 4=7774
 methane, radiolysis and photolysis, effect of pressure 4=17870
 methane, Raman scatt. at 15-250 atm. 3=176
 methane, Raman spectra 0=17746, 17752
 methane, Raman spectrum, laser stimulated, four photon 4=9704

Organic compounds—contd

- methane-d₄, Raman spectrum, rotational analysis 1=6018
 methane, range of ions (Z=2 to 13) 2=7674
 methane, Rayleigh scatt., depolarization. 3=175
 methane, reaction with hot H atoms 2=4561
 methane, reaction with (n, γ) activated I¹²⁸ 1=10298
 methane, reaction rates with mixtures of (O + O₂) 4=4693
 methane, refractivity, second virial coeff. 3=3835
 methane, SCF MO one-centre basis set 4=20046
 methane, second virial coeff. 0=19199
 methane, second virial coeff. estim. 2=11414
 methane, shock excited, in granular pressings, temp., calc. 4=2774
 methane, shock-front structure and reflectivity 1=167
 methane, slow electron diffusion meas. 2=13381
 methane, slow-neutron scatt., effect of rotational levels 1=19624
 methane, solid, absorption spectrum, vac. u.v. 0=13696
 methane, solid, intermolecular potential, cohesive energy and crystal structure 4=22456
 methane, solid, phase transitions and compressibilities 0=12055
 methane, solid, second transition 2=14379
 methane, sorption rate on chabazite 4=15830
 methane, spectr. det. of C-H bond moment 2=12339
 methane, spectra, emission, excited by protons and H atoms 3=15338
 methane, substituted, chem shift, rel. to C¹³-H, spin-spin coupling 3=20022
 methane, test for Lennard-Jones potential 1=15847
 methane, thermal conductivity of condensed films 0=6390
 methane, thermal transpiration at high temps. and 3×10^{-3} -2.5 mm Hg press. 4=5224
 methane, thermodynamic props. 0=1064
 methane, Townsend discharge, and in N₂-CH₄ 0=12595
 methane, Townsend ionization coeff. α 0=2316
 methane, transport props. meas., rotational relax. 4=5241
 methane, transport properties in terms of Morse potential 4=8241
 methane, turbulent wakes 3=164
 methane, $2\nu_3$ band, fine structure 0=17751
 methane, $2\nu_3$ and $2\nu_4$, vibr.-rot. interact. 3=6413
 methane, vac. u.v. photolysis 2=19155
 methane, vibr.-rotational energy transfer 3=6414
 methane, viscosity, -50° to 150°C, below 200 atm. 4=24264
 methane, viscothermal and thermal relaxation 4=24271
 methane, wave-functions 1=14088
 methanes, deuterated, vibrational intensities, bond moments 0=17740
 methanes, geminal HH coupling consts. 3=8294
 methanes, isotopic, force constants, i.r. spectra and thermodynam. functions 0=5898
 methanes, isotopic, 2nd virial coeff. 2=15641
 methanes, substituted, C¹³ splittings in proton resonance spectra, bond study 0=4224
 methanes, substituted, geminal spin-spin coupling consts. 2=14301
 methanes, substituted, vibrational spectra, molecular and thermodynamic props. 0=4207
 methanes, T-substituted, mass spectra 4=3921
 methanes, X-substit., rel. to atomic interacts. 2=18490
 methanethiol, p.m.r., spin-lattice relax. and chem. shift 4=18220
 methanol, absorption band shift, rel. to anion radius 4=2683
 methanol adsorbed on Al₂O₃ surfaces, i.r. spectral study 3=3362
 methanol, adsorption by Ge surfaces 0=12115
 methanol, aq. solns., density fluctuations, study by Rayleigh light scatt. and hypersound dispersion 1=4341
 methanol-benzene solns., refractive index 0=10668
 methanol, rel. to contact ion pairs of tetra-n-butyl ammonium iodide in CCl₄ 3=13612
 methanol, crystal structure, -180°C 0=21204
 methanol, dielectric const., 2.1 mm 4=2703
 methanol, double refraction in strong shock waves 3=7205
 methanol, effect on fluorescence of acetylanthracene in hexane 1=9400
 methanol, exchange between solvated cations and solvent 3=8944
 methanol, higher ionization potentials, meas. by electron impact 4=24601

Organic compounds—contd

- methanol, γ -irrad., e.p.r. spectrum of free radicals formed 4=15379
 methanol and methanol-water mixtures, Co^{++} n.m.r. rel. to solvation 4=14189
 methanol and methanol-water mixtures, Ni^{++} n.m.r. 4=14190
 methanol, microwave K-doublet, Stark effect 1=3539
 methanol, oxidation using photosensitized ZnO 4=23652
 methanol, p.m.r., spin-lattice relax. and chem. shift 4=18220
 methanol, paramagnetic resonance 1=15907
 methanol, proton-transfer ion-molecule reactions 4=23623
 methanol, radiolysis by recoils from $\text{B}^{10}(\text{n}, \alpha)\text{Li}^7$ 0=14133
 methanol, superheated, nucleation by elec. field 3=14420
 methanol, surface tension, effect of Ar, 1-120 atm 3=18795
 methanol, temp. dependence of vap. press., viscosity and heat of vaporization 0=5215
 methanol, Urey-Bradley force consts. 3=8292
 methanol, vaporization, forced, at 25°C 0=14908
 methanol-water solution, u.s. velocity, rel. to cavitation 0=19129
 methinophosphide, HCP, microwave spectrum 4=15372
 methol, normal and supercooled, u.s. velocity, temp. depend. 0=6789
 1-methoxyvinyl esters, proton resonance, effect of substitutional R. COO-groups 0=6276
 methyl acetate, microwave absorption 0=19210
 methyl acetylene, *l*-type doubling and resonance 3=19960
 methyl acrylate and methacrylate, γ -irrad. at 77°K, free radicals, e.s.r. 1=14107
 methyl alcohol, in acetonitrile, absorpt. band of O-H bond 3=8285
 methyl alcohol-air flames, OH bands 3=12830
 methyl alcohol, b. p. and strong elec. field 2=7472
 methyl alcohol-chloroform, light scatt. 2=21909
 methyl alcohol-cyclohexane mixtures, critical opalescence 2=17450
 methyl alcohol, dispersion at mm wavelengths rel. to dielec. props. 3=1706
 methyl alcohol, effect on crystallization of caprone 0=1885
 methyl alcohol, flowing along solid surf., CO_2 absorption 2=9267
 methyl alcohol, fog droplets growth and condensation coeffs. 4=5467
 methyl alcohol, gaseous, Raman spectra 1=7473
 methyl alcohol, glycerol with KCl, Debye effect 2=7211
 methyl alcohol, microwave spectrum 2=14269
 methyl alcohol microwave spectrum, σ -Stark effect 3=734
 methyl alcohol, multiple proton mag. resonance relaxation 1=15910
 methyl alcohol, n.m.r., J coupling theory 3=14790
 methyl alcohol, NO u.v. absorption spectra 2=5020
 methyl alcohol, nuclear magnetic resonance 1=5287
 methyl alcohol, O_2 u.v. absorption spectra 2=5020
 methyl alcohol, Raman spectra 2=8099
 methyl alcohol, Raman spectrum rel. to change of state 3=731
 methyl alcohol, reactions with slow positive ions 2=6870
 methyl alcohol solns. of Mn^{2+} ions, proton resonance 1=157
 methyl alcohol, solvation number of Mg^{2+} 3=1685
 methyl alcohol, sound velocity meas. 4=8206
 methyl alcohol, thermal cond., 20°C 2=15571
 methyl alcohol, transient n.m.r. signals 4=29647
 methyl alcohol, 2.8 MeV electron beam, energy loss 1=18935
 methyl alcohol, u.s. absorption 2=15707
 methyl alcohol, ultrasonic waveform distortion, det. of nonlinear parameters 1=4337
 methyl ammonium alum, crystalline dimorphism 3=1342
 methyl ammonium alum dielectric properties 1=11337
 methyl ammonium alum, low temp. phase, crystal structure, atomic 4=13616
 methyl anilines, C^{13} nuclear magnetic resonance 3=10544
 methyl azide, photolysis in solid A and CO_2 1=20755
 methyl benzoate, nuclear spin-lattice relax. meas. 3=23912
 methyl borate, Raman spectra 2=8100
 methyl bromide, adsorbed on porous glass, i.r. band shapes, rotational freedom 0=15731

Organic compounds—contd

- methyl bromide, dielectric dispersion 0=14696
 methyl bromide, dissociation by nuclear isomeric transition of $\text{Br}^{80\text{m}}$ 0=16388
 methyl bromide, i.r. spectrum 2=20853
 methyl bromide, thermal cond., press. and temp. depend. 0=19202
 methyl cellulose, flow birefringence, ageing effect 1=15876
 methyl chloride dielectric dispersion 0=14696
 methyl chloride, refractive index 10 Gc/s, and susceptibility 4=239
 methyl chloride, refractivity, press. depend. 0=6839
 methyl chloroform, molecular rotational relaxation 1=12898
 methyl cyanide, *l*-type doubling and resonance in r.f. 3=19960
 methyl cyanide sources at 0.34 mm wavelength 4=24904
 methyl cyclohexane, u.s. studies of isomerization 1=4340
 methyl derivs., of benzene, photoionization 2=9527
 methyl and deuteromethyl halide solns., i.r. absorpt. bands and mol. rot. 4=24219
 methyl ether- CCl_2F_2 and $-\text{SF}_6$, vibr. energy transfer 3=6434
 methyl and ethyl alcohols, dispersion in mm range 4=2701-2
 methyl ethyl ketone, superheated, nucleation by elec. field 3=14420
 methyl ether-methyl chloride, vibr. energy transfer 3=6434
 methyl fluoride, absorption spectra, nonresonant 0=10760
 methyl fluoride, refractivity, press. depend. 0=6839
 methyl fluoride, Stark effect and dipole moment 3=17601
 N-methyl formamide, Raman spectra 2=7218
 methyl formamides, n.m.r., J coupling theory 3=14790
 methyl formate, site of protonation 1=11120
 methyl formate, u.s. velocity rel. to temp. 1=18408
 methyl groups, nonbonded, repulsive potential 1=828
 methyl halides, and deuterated, bond polar properties, 1-872
 methyl halides, i.r. spectra, errata 4=20091
 methyl halides, solid, far i.r. spectra 2=4150
 methyl halides, Urey-Bradley force consts. 0=15685
 methyl hypochlorite, microwave spectrum 4=20090
 methyl iodide, cryst., Raman spectrum 4=28715
 methyl iodide, gas-phase photolysis, reactions of hot methyl radicals with added organic cpds. 4=28271
 methyl iodide, gas-phase reaction with HI 3=11339
 methyl iodide, I pure quad. res., temp. depend. 2=10727
 methyl iodide, i.r. spectrum 2=20854
 methyl iodide, ionization by photon impact, efficiency 0=17720
 methyl iodide, liquid, spec. ht. 2=11356
 methyl iodide, reactions with alkali atoms 3=5160
 methyl iodide, u.v. absorption in gas and solid 1=855
 methyl isocyanate, microwave spectrum 4=6629
 methyl isopropyl ketone, photolysis 1=20757
 methyl isothiocyanate, molal thermodynamic props., ideal gas state. 273-1000°K 3=14210
 methyl ketone, light scatt., absolute intensity, exper. determ. 4=24211
 methyl malonic acid, free radicals in X-irradiated crystals 2=2299
 methyl mercaptan (CH_3SH), liquid and vapour, density, temp. var. 1=15837
 methyl mercaptan, microwave spectrum 1=9929
 methyl methacrylate, u.s. velocity rel. to molecular parameters 1=18403
 methyl and methane groups, in paraffin-naphthene fraction, i.r. anal. 2=19176
 9-methyl-10-methoxy-methylanthracene, fluorescence 2=14745
 N-methyl methylenimine, microwave spectrum 4=25710
 β -methyl naphthalene, stepped surface in crystal growth 4=20732-3
 methyl 1:2 benzantraquinones, structure 0=10318
 methyl orange dye, use as spectrophotometric dosimeter in range 500-5000 rad 4=5894
 methyl orange dyes on silica and silica-alumina gels, absorption spectra recording meth. 2=19705
 2-methyl pentanediol 2,4, dielec. relax. rel. to assoc. 3=1704
 methyl radical, orbital following 4=17323
 methyl salicylate, n.m.r. 3=8302

Organic compounds—contd

- methyl silane, i. r. spectrum 2=16545
 methyl siloxanes, compressibility and shear viscosity, temp. depend. 3=21309
 methyl stannane, microwave spectrum, barrier to int. rot. 2=3740
 methyl-substit. mols., hyperconjugation, rel. to proton hyperfine splitting 3=739
 methyl-substituted benzenes, elec. conductivity 4=11213
 methyl sulphide-BF₃ complex, B isotope separation 0=17676
 methyl thionitrite, force const. and vibr. modes 4=6630
 methyl violet, polarization of fluorescence 2=6630
 methylchlorophyllide a, photocond., temp. var. 4=17533
 methyldifluoroarsine, microwave spectrum 2=20852
 N-methylacetamide, solvent effect on i. r., absorption 0=9805
 methylacetylene, i. r. spectrum, ν , band 3=4770
 methylacetylenes, molecular consts. 2=20851
 9-methyladenine, crystal structure 4=20769
 methylal, elec. discharge, light emission, time depend. 0=2330
 methylamide, liq., thermal neutron scatt. 3=2652
 methylamine alum, Fe³⁺ zero-field e. s. r. 2=770
 methylamine chrome alum, metamagnetism 0=21030
 methylamine, dissolved Cs and Rb e. s. r. 3=16640
 methylamine, normal vibrations and force consts. 2=1989
 3-methylaminophthalimide, optical props. 3=1703
 methylaniline, photoionization, electron energy distrib. 1=16263
 methylaniline, photoionization, electron energy distrib. 1=18763
 9-methylanthracene, fluorescence 2=14745
 9-methylanthracene and perylene, excitation energy transfer, effect of solvent viscosity 3=23887
 methylbenzenes, hindrance to rot. of methyl groups 2=18460
 1-methyl-cis-4-cyclohexene-1, 2-dicarboxylic anhydride, n. m. r., multiple reson. analysis 4=9774
 methylcyclohexane and benzene, low-temp. soln. spectra 2=14674
 methylcyclohexane, enthalpy change calc. for isomeric reaction 0=10662
 methylcyclohexane, fluorinated, spectral dispersion curves 3=17591
 methylcyclohexane-perfluoromethylcyclohexane system, nucleation theory tests 2=13489
 methylcyclohexane, radiolysis 2=8928
 methylcyclohexane, ultrasonic absorption 2=5014
 3-methylcyclopentanone, optical activity calc. 1=2344
 3-methylcyclopentanone, optical activity, one-electron theory, variational calc. 4=22407
 methyldiboranes, vibrational freq. calc., Average Rule and Complete Isotopic Rule 1=13996
 methyldichlorosilane, n. m. r. spectrometer resolution detm. 3=19471
 methyl-N,N-dimethylaniline, C¹³ nuclear magnetic resonance 3=10544
 methylene blue and green, liquid crystal spectrum 4=24220
 methylene-blue, polarization measurements of absorption spectrum 1=11099
 methylene bromide, u. s. absorption 0=127
 methylene chloride, liquid, spec. heat relaxation 0=6791
 methylene chloride, nuclear quadrupole relaxation and its temp. dependence 3=25598
 methylene chloride, reaction with active N₂, quenching by CH₂Cl₂ 3=11344
 methylene derivs., electron spin-spin interact., bond angle effect 3=25126
 methylene, far-u. v. spectrum 2=14284
 methylene, heat of formation 3=18438
 methylene imino free-radicals, e. s. r. detect. 2=12351
 methylene, triplet ground state, chemical evidence 0=15711
 methylenes, substituted, C¹³ e. s. r. h. f. s., and struct. 4=24240
 methylether in soln., microwave absorpt. and mobility 2=7229
 methylethylketone, aq. soln., boiling, bubble growth rate 2=5217
 methyl-fluoro-silane molecules, potential functions 3=20011
 methylgermane, i. r. spectra 3=17603
 4-methyl-2-hexanone, photolysis 2=23968

Organic compounds—contd

- methyliodobenzenes, C¹³ nuclear magnetic resonance 3=10543
 methylmethacrylate, γ -irradiated, dielectric properties 0=6803
 methylmethacrylate liquid state, u. s. velocity and compressibility 1=18406
 β -methyl-naphthalene, from ethyl alcohol soln., growth spiral-soln. spiral transition 0=13957
 2-methyl-naphthalene, fluoresc. in micelle soln. 4=14176
 α -methynaphthalene layers, photoconductivity 4=22811
 1-methynaphthalene, in liq. scintillators 4=14964
 1 and 2 methynaphthalene molecules, vibration symmetry types 3=17605
 β -methyl-naphthalene, step growth in supersat. vapour 1=14977
 α - and β -methyl-naphthenyl radical, spin density, calc. 1=6055
 methylnitrobenzenes, C¹³ nuclear magnetic resonance 3=10545
 methyl-1, 2-benzanthracenes, out-of-plane CH vibrations 0=17738
 methylphosphine, microwave spectrum and internal barrier 2=1992
 methylphosphoryl chlorofluoride, heat capacity meas. and thermodynamic props. from 15° to 335°K 4=30521
 methylphosphonyl dichloride, heat capacity meas. and thermodynamic props. from 15° to 335°K 4=30521
 methylphosphoryl difluoride, heat capacity meas. and thermodynamic props. from 15° to 335°K 4=30521
 methylphthalimide derivatives, fluorescence, effect of halogens 0=13718
 methylsilylacetylene, i. r. spectrum 3=4771
 methylsilyl-d₃-acetylene, far and near i. r. spectrum 4=28246
 4-methyl-7-oxycumarine in polymethylmethacrylate, luminescence 4=22937
 2-methyl-2-nitropropanediol-1, 3 solutions n. m. r. of methylene and hydroxyl protons 4=24249
 methyl-2-pentene-1, photocond. and photoionization 4=27189
 methylstannanes and related cpds., proton mag. resonance 3=22602
 1-methylthymine, crystal structure 3=8869
 methyltrichlorosilane, i. r. spectra intensity 2=22991
 methyltrideuterosilane, i. r. spectrum 2=16545
 methyltrifluorosilane, potential energy coeffs. calc. 4=6631
 methyltrivinylsilane, proton energy levels, by nuc. mag. double resonance 3=2658
 methylvinylketone, proton mag. res. spectra 3=2657
 Mexicanin-E, crystal structure meas. 2=19084
 milk gels, rheology 0=4746
 milks, fat-free and renneted, viscosity meas. 0=14575
 milling yellow solution, acoustic impedance in circular tubes 1=11758
 mineral oils, fluorescence meas. 2=9285
 mixtures with N₂ (or N₂ + H₂), luminescence 1=15961
 molec. crystals in triplet state, photocond. 3=4951-2
 molecular complex form., by electron transfer 3=21003
 molecular complexes, solid, semiconducting props. 2=23305
 molecular crystals, doped, radiationless transition probabilities 4=12686
 molecular crystals, e. s. r. of radical impurity, spin-lattice relax. 2=777, 23713
 molecular crystals, magneto-optical effects, weak exciton-phonon interaction 1=11349
 molecular crystals, nuclear spin-lattice relaxation 4=23063
 molecular crystals, sensitized fluorescence 1=1771
 molecular environment of carbonyl group, effect on i. r. intensity 3=6405
 molecular nuclear spin-spin coupling consts., J_X-C-H and J_X-H 4=20099-100
 molecular structure correlations for 25 cpds. 0=15776
 molecule conjugated, π orbital, doubly occupied, correl. energy 3=22576
 molecules with 50 to 100 atoms, quantum theory 4=12436
 molecules, O¹⁷ n. m. r. linewidths, rel. to quadrupole coupling consts. 3=22599
 molecules in soln., triplet state decay 4=11198
 molecules with two equivalent methyl groups, rotation-internal torsion levels 0=15696
 monoalkylbenzene, absorption spectra 2700 Å, rel. to substituent radicals, 20°K 4=7141

Organic compounds—contd

- monoalkylbenzols, absorption spectra, 20°K 2=18464
 monocarboxylic acids, crystal structure by PMR 1=20276
 monochloroacetic acid, crystal structure by PMR 1=20276
 monochloroacetic acid crystals, 3 polymorphous phases, C1 n. q. r. 4=13353
 monochloroacetonitrile, N¹⁴ n. q. r. 2=14861
 monochloroacetonitrile, nuc. quadrupolar coupling 3=2656
 monochlorobenzene—paraffin oil, props. rel. to ultrasound 3=9471
 monochloroethyl and trichloromethyl radicals, recombination and disproportionation 3=8974
 monochloromethane, h.f.s., using beam spectroscopy 4=6617
 monodeutero benzene, in hexadeutero benzene, vibronic spectrum 4=15605
 monodeuteroethylene, vapour pressure, isotope effect 3=8248
 monofluoroacetonitrile, microwave spectrum 3=4772
 monoisopropyl diphenyl, neutron absorption 2=18127
 monoisopropyl diphenyl, neutron diffusion 3=2271
 monoisopropyl biphenyl, neutron diffusion parameters 4=3758
 monomethyl aromatic compounds, i.r. band assignments for 2900 cm⁻¹ vibrations 1=845
 monomethyl benzene ion radicals, spin and charge densities, temp. depend. 3=25151
 mononitrophenols adsorbed in solution and on solid surfaces, spectral reflectance 4=25711
 mono-olefins, analogue of $n \rightarrow \pi^*$ transitions 3=15367
 on moon 0=8487
 morpholinium⁺ tetracyanoquinodimethane⁻, e.s.r. 1 to 600 atm 4=28878
 mustard oil, dielectric properties at 8.7 mm 0=18090
 myoglobin crystals, magnetic susceptibility 1=14673
 n.m.r., chemical shifts, theory 3=15375
 N.M.R. natural line width det. 1=12024
 n.m.r. techniques, survey 3=17065
